enumext
ENUMERATE EXERCISE SHEETS

v1.6   2025-07-04*

©2024–2025 by Pablo González L†

Abstract

This package provides enumerated list environments compatible with *tagging* PDF for creating *"simple exercise sheets"* along with *"multiple choice questions"*, storing the *"answers"* to these in memory using `multicol` package.

Contents

Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate *"simple exercise sheets"* or *"multiple choice questions"*, the basic idea behind enumext is to cover three points:

1. To have a simple interface to be able to write *"lists of exercises"* with *"answers"*.
2. To have a simple interface for writing *"multiple choice questions"*.
3. To have a simple interface for placing *"columns"* and *"drawings"* or *"tables"*.

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all LaTeX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep - what do they each mean (and what about the bottom)?
2. Answer given by Enrico Gregorio in Understanding minipages - aligning at top
3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

---

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (`https://www.latex-project.org/lppl.txt`). The software has the status "maintained".

The enumext package loads and requires multicol[3] package, need to have a modern TeX distribution such as TeX Live or MiKTeX. It has been tested with the standard classes provided by LaTeX: book, report, article and letter on 10pt, 11pt and 12pt.

💣 The minimum requirement is LaTeX release 2025-06-01.

1 Introduction

In the LaTeX world there are many useful packages and classes for creating *"lists of exercises"*, *"worksheets"* or *"multiple choice questions"*, classes like exam[1] and packages like xsim[2] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use *"simple exercise sheets"* also known as *"informal lists of exercises"*, as an example:

1. Factor $x^2 - 2x + 1$
2. Factor $3x + 3y + 3z$
3. True False
   (a) $\alpha > \delta$
   (b) LaTeX2e is cool?
4. Related to Linux

(a) You use linux?
(b) Usually uses the package manager?
(c) Rate the following package and class
   i. `xsim-exam`
   ii. `xsim`
   iii. `exsheets`

Sometimes we are also interested in showing the *"answers"* along with the questions:

1. Factor $x^2 - 2x + 1$
   * $(x-1)^2$
2. Factor $3x + 3y + 3z$
   * $3(x + y + z)$
3. True False
   (a) $\alpha > \delta$
      * False
   (b) LaTeX2e is cool?
      * Very True!
4. Related to Linux

(a) You use linux?
   * Yes
(b) Usually uses the package manager?
   * Yes, `dnf`
(c) Rate the following package and class
   i. `xsim-exam`
      * doesn't exist for now :(
   ii. `xsim`
      * very good
   iii. `exsheets`
      * obsolete

Or we are interested in referring to a specific question and its *"answer"*, for example:

The answer to 3.(b) is "Very True!" and the answer to 4.(c).ii is "very good".

Or we are interested in printing all the *"answers"*:

1. $(x-1)^2$ ※
2. $3(x + y + z)$ ※
3. (a) False ※
   (b) Very True! ※
4. (a) Yes ※

(b) Yes, `dnf` ※
(c) i. doesn't exist for now :(※
   ii. very good ※
   iii. obsolete ※

Another very common thing to use in my work is *"multiple choice questions"*, for example:

1. First type of questions
   A) value   C) value
   B) correct   D) value

2. Second type of questions
   I. $2\alpha + 2\delta = 90°$
   II. $\alpha = \delta$
   III. $\angle EDF = 45°$

   A) I only   D) I and III only
   B) II only   E) I, II, and III
   C) I and II only

★ 3. Third type of questions
   (1) $2\alpha + 2\delta = 90°$
   (2) $\angle EDF = 45°$

   A) value   D) value
   B) value   E) value
   C) value

4. Question with image and label below:
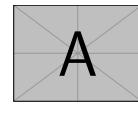

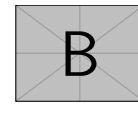

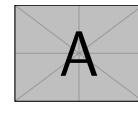

A)   B)   C)
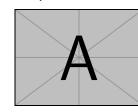

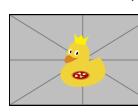

D)   E)

5. Question with image on right side:
   A) value
   B) value
   C) value
   D) correct
   E) value
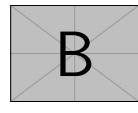

Where what we are interested in the ⟨*label*⟩ and a *"short note"* that we leave as an explanation, and then print them:

1. B) $x = 5$
2. D)
3. C) some note
4. E) A duck
5. D) "other note"

The enumext package was created and designed to meet these small requirements in the creation of *"simple worksheets"* and *"multiple choice questions"*.

These *"simple worksheets"* or *"multiple choice questions"* appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what *"looks simple"* is not so simple.

1.1 Description and usage

The enumext package defines enumerated environments using the list environment provided by LaTeX, but *"does not redefine"* any internal commands associated with it such as \list, \endlist or \item outside of the *"scope"* in which they are defined.

This package is NOT intend to replace the enumerate environment nor replace the powerful enumitem[6], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex»dvips»ps2pdf and is present in TeX Live and MiKTeX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run luatex enumext.ins and move all files to appropriate locations, then run mktexlsr. To produce the documentation run arara enumext.dtx.

```
enumext.sty   »   TDS:tex/latex/enumext/
enumext.pdf   »   TDS:doc/latex/enumext/
README.md     »   TDS:doc/latex/enumext/
enumext.dtx   »   TDS:source/latex/enumext/
enumext.ins   »   TDS:source/latex/enumext/
```

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an *"extra space"* that makes it difficult to obtain the desired *horizontal spaces* in a list environment. Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem.

The enumitem[6] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure 1.
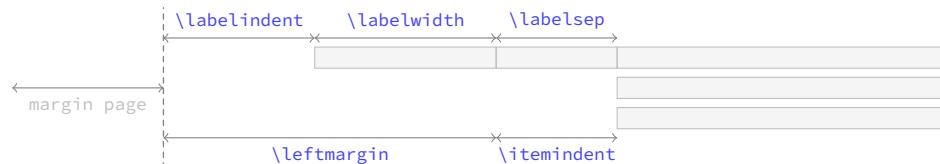

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure 2 shows the visual representation of idea.
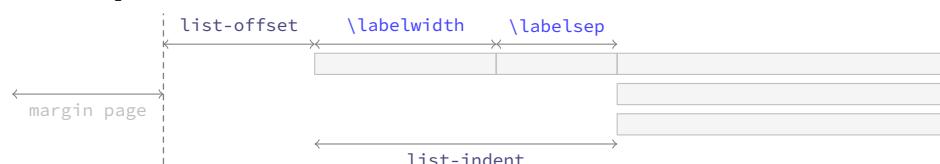

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for *"simple worksheets"*. The figure 3 shows the visual representation.
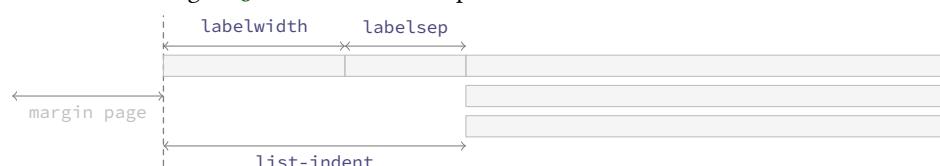

Figure 3: Default horizontal lengths list-offset=0pt, list-indent=\labelwidth+\labelsep in enumext.

1.3 User interface

The user interface consists of two main list environments `enumext` (vertical) and `enumext*` (horizontal), the environment `anskey*` and the command `\anskey` to *"store content"* and the environments `keyans`, `keyans*` and `keyanspic` for multiple choice. It also provides the commands `\getkeyans` to print individual *stored content*, `\printkeyans` to print all *stored content*, `\foreachkeyans` to print a rage of *stored content*, `\miniright` for `minipage`, `\setenumext` to config [⟨*key = val*⟩], `\setenumextmeta` to add a *"meta-key"* and `\resetenumext` for reset counters.

1.3.1 Public counters

The package `enumext` uses the `enumXi`, `enumXii`, `enumXiii`, `enumXiv` counters for the *four* nesting levels of the `enumext` environment, the `enumXv` counter for the `keyans` environment, the `enumXvi` counter for the `keyanspic` environment, the counter `enumXvii` for `enumext*` environment and the counter `enumXviii` for `keyans*` environment.

🫧 If any package defines these *counters* or they are user-defined in the document, the package will return a *"fatal error"* and abort the load.

1.3.2 Public dimension

The package `enumext` only provides a *single public dimension* `\itemwidth` and is intended for user convenience only and is NOT for internal use as such. The dimension `\itemwidth` is *rigid length* and contains the *"width of the content"* of each `\item` regardless of `labelwidth` and `labelsep`.

🫧 If any package defines `\itemwidth` or they are user-defined `\itemwidth` in the document, the package will overwrite it without warning.

1.3.3 Support for multicol

The package provides direct support for using the `multicol`[3] package. This allows to obtain directly a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in `enumext` environment.

The *"non starred"* version of the `multicols` environment is always used together with the `\raggedcolumns` command and is controlled by `columns` and `columns-sep` keys. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and can together with the `mini-env` key. If you need to force a start a new column `\columnbreak` must be used (see §5.7).

🫧 The `\columnseprule` command is not available as a key and is set to *"zero"* for the inner levels and the `keyans` environment. If the value of this is set inside the document, it will affect *"all environments"* that use the `columns` key.

1.3.4 Support for `minipage`

The package provides direct support for `minipage` environment, this allows you to obtain an output like the one shown in figure 5.
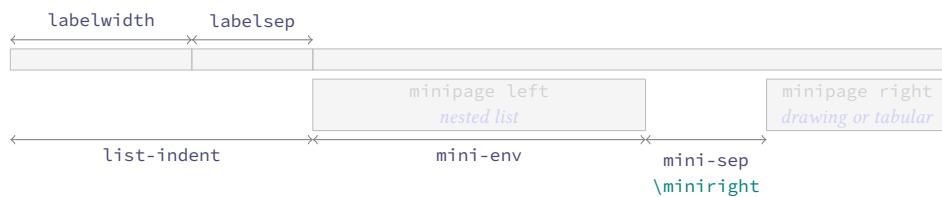

Figure 5: Representation of the `mini-env` output for a nested level `enumext` environment.

The `minipage` environments on *"left side"* and *"right side"* is always used with *"aligned on top"* [t]. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and is controlled by `mini-env` and `mini-sep` keys. In order to switch from the *"left"* side `minipage` environment to the *"right"* side one must use the command `\miniright` (see §5.8).

1.3.5 The `\label` and `\ref` system

This package provides a user interface like the `enumitem`[6] package to customize the references which is activated by the `ref` key (§5.1), the standard LaTeX `\label` and `\ref` commands work as usual. It also provides an *"internal reference"* system for the *"stored content"* by means of the key `save-ref` (§6.1.1) when the key `save-ans` is active (§6.1).

1.3.6 Support for `\footnote`

The `enumext*` and `keyans*` environments and the `mini-env` key use the `minipage` environment in their implementation but in a transparent way for the user, it is only used for typesetting. The implementation supports `\footnote` and is compatible with `hyperref` and works the same way as if used anywhere in the document.

Unfortunately, if `hyperref` is loaded and *tagged* PDF is not active, it will not produce the "link's", the internal implementation uses `\footnotetext[`⟨*number*⟩`]` and `\footnotemark[`⟨*number*⟩`]{`⟨*text*⟩`}` and "link's" for this are not supported by the `hyperref` package.

The best way to solve this if *tagged* PDF is NOT active is to use Jean-François Burnol `footnotehyper`[9] package, it will support keeping the "link's" if `hyperref` is loaded with the `hyperfootnotes=true` option (default). Load it is as follows:

```
\IfDocumentMetadataF
  {
     \usepackage{footnotehyper}
     \makesavenoteenv{enumext}
     \makesavenoteenv{enumext*}
  }
```

At the moment the `footnotehyper` package v1.1e (2021/08/13) is not compatible with *tagged* PDF.

2   The environments provided

The package enumext provides two main list environments, the *vertical* environment `enumext` and the *horizontal* environment `enumext*`.

enumext
enumext*

```
\begin{enumext}[⟨keyval list⟩]          \begin{enumext*}[⟨keyval list⟩]
  \item ⟨item content⟩                    \item ⟨item content⟩
  \item [⟨custom⟩] ⟨item content⟩         \item [⟨custom⟩] ⟨item content⟩
  \item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩   \item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩
\end{enumext}                            \end{enumext*}
```

2.1   The environment enumext

The `enumext` is an environment that works in the same way as the standard `enumerate` environment provided by LaTeX, `\item` and `\item[`⟨*custom*⟩`]` commands work in the usual way. The environment can be nested with at most *"four levels"* and the options can be configured globally using `\setenumext` command and locally using `[`⟨*key = val*⟩`]` in the environment.

Example with `columns=2`

1. This text is in the first level.

   (a) This text is in the second level.

       i. This text is in the third level.

A. This text is in the fourth level.

X This text is in the first level.

⋆ 2. This text is in the first level.

2.2   The environment enumext*

The `enumext*` is a *horizontal list environment* similar to the `shortenumerate` or `tasks` environments provided by the `shortlst`[16] and `tasks`[17] packages, `\item` and `\item[`⟨*custom*⟩`]` work as usual. The options can be configured globally using `\setenumext` command and locally using `[`⟨*key = val*⟩`]` in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment `keyans*`, but it can be nested within `enumext` and vice versa.
- Each *"item content"* in the environment is placed within a `minipage` environment whose *width* is stored in the dimension `\itemwidth` that NOT includes `labelwith`, `labelsep`, only the *width of the content*.
- You cannot have floating environments like `figure` or `table` or `\marginpar` but `\footnote` with `hyperref` is supported. If you want to activate link's *"without"* *tagged* PDF active you must load `footnotehyper` and `hyperref` packages (see §1.3.6).
- You cannot have any standard list environments like `itemize`, `enumerate`, `description`, `quote`, `quotation`, `verse`, `center`, `flushleft`, `flushright`, `verbatim`, `tabbing`, `trivlist`, `list` and all environments created with `\newtheorem`.

Example with `columns=2`

1. This text is in the first level.

X This text is in the first level.

2. This text is in the first level.

⋆ 4. This text is in the first level.

2.3   The command \item*

\item*

```
\item*[⟨symbol⟩][⟨offset⟩]
```

The `\item*`, `\item*[`⟨*symbol*⟩`]` and `\item*[`⟨*symbol*⟩`][`⟨*offset*⟩`]` works like the numbered `\item`, but placing a ⟨*symbol*⟩ to the *"left"* of the ⟨*label*⟩ separated from it by the ⟨*offset*⟩ set by the the *second optional argument*.

The *starred argument* '`*`' cannot be separated by spaces '␣' from the command, i.e. `\item*` and the *first optional argument* does NOT support *verbatim content*. Can be configure with the keys `item-sym*` and `item-pos*` locally in the environment or globally using `\setenumext` command (§3).

🌀 The behavior of \item* in the enumext and enumext* environments is NOT the same as in the keyans and keyans* environments.

2.3.1 Keys for \item*

item-sym* = {⟨symbol⟩}   default: \textborn

Sets the *symbol* to be displayed in the *"left"* of the box containing the current ⟨label⟩ set by labelwidth key for \item* in enumext and enumext*. The *symbol* can be in *text* or *math* mode, for example item-sym*={$\star$}.

item-pos* = {⟨rigid length⟩}   default: *by levels*

Sets the *offset* between the box containing the current ⟨label⟩ defined by labelwidth key and the ⟨symbol⟩ set by item-sym* key. The default values are set by labelsep key at each level. If positive values are passed it will *offset to the left* and if negative values are passed it will *offset to the right*.

2.4 The command \item in enumext*

The \item command for the enumext* environment provides an *"first optional argument"* \item(⟨columns⟩) which *"joins items"* between columns. Let's consider the following examples adapted directly from the task package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
  \item The ninth
  \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

1. The first   ⋆ 2. The second   3. The third   4. The fourth

⋆ 5. The fifth item is way too long for this and needs three columns   6. The sixth

7. The seventh   X The eighth item is way too long for this and needs 9. The ninth
                            two columns (196.17749pt)

Z The tenth (89.28171pt)

3 The command \setenumext

\setenumext

\setenumext{⟨key = val⟩}   \setenumext[⟨keyans*⟩]{⟨key = val⟩}
\setenumext[⟨enumext, level⟩]{⟨key = val⟩}   \setenumext[⟨print, level⟩]{⟨key = val⟩}
\setenumext[⟨enumext*⟩]{⟨key = val⟩}   \setenumext[⟨print, *⟩]{⟨key = val⟩}
\setenumext[⟨keyans⟩]{⟨key = val⟩}   \setenumext[⟨print*⟩]{⟨key = val⟩}

The command \setenumext sets the ⟨keys⟩ on a global basis for environments enumext, enumext*, keyans, keyans* and the \printkeyans command. It can be used both in the preamble and in the body of the document as many times as desired.

The ⟨keys⟩ set in the *optional argument* of environments and commands have the *highest precedence*, overriding both options passed by \setenumext. If the *optional argument* is not passed, the *first level* of the environment enumext will be taken by default.

🌀 For security reasons the keys resume *"with value"*, resume*, reset, reset*, series and save-ans they can NOT be set by this command and are ignored. The key save-ans that activate the *"storage system"* must be passed directly in the *optional argument* of the *"first level"* of the environment in which they are executed.

4 The command \setenumextmeta

\setenumextmeta

\setenumextmeta[⟨1⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨2⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨3⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨4⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta[⟨*⟩]{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}
\setenumextmeta*{⟨key name⟩}{⟨key-one = val, key-two = val, ...⟩}

The command \setenumextmeta adds a new *"meta-key"* for the environments enumext and enumext*, the {⟨key name⟩} must be different from those defined by the package. The *optional argument* of the form [1], [2], [3], [4] adds a new *"meta-key"* for levels 1, 2, 3 and 4 of the enumext environment, the form [*] adds a new *"meta-key"* for the enumext* environment. If is run *without* the *optional argument*, it will adds a new *"meta-key"* for the *"first level"* of the enumext environment.

The *starred argument* '*' will create the new *"meta-key"* for the environment enumext* and for *"all levels"* of the environment enumext. For example: `\setenumextmeta*{midsep}{topsep=3pt, partopsep=0pt}` will create a new key midsep available for all levels of the enumext environment and the enumext* environment and we can use it like any other key so `\begin{enumext}[midsep]` and `\begin{enumext*}[midsep]` will be valid.

🔵 The old syntax `\setenumextmeta[⟨enumext*⟩]` and `\setenumextmeta[⟨enumext, level⟩]` is still supported but is not recommended and may be removed in the future.

5   The keyval system

The ⟨key = val⟩ system used by the enumext package is implemented using l3keys so it must be taken into consideration that those keys marked as *"value forbidden"*, that is ⟨key⟩ is different from ⟨key=⟩.

All ⟨keys⟩ described in this section are available for the enumext, enumext*, keyans and keyans* environments with the exception of the keys series, resume, resume*, reset and reset* which are only available for the enumext and enumext* environments; and the keys mini-right, mini-right* which are only available for the enumext* and keyans* environments.

All ⟨keys⟩ related to vertical or horizontal spacing accept a *"skip"* or *"dim"* expression if passed between braces, i.e. you do not need to use `\dimeval` or `\dimexpr` to perform calculations.

🔵 It should be kept in mind that using any ⟨key⟩ that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and keyans, keyans* and keyanspic environments.

5.1   Keys for label and ref

mode-box ⟨value forbidden⟩   default: *not used*

This is a *"switch-key"* that does not receive an argument and is "only" available for the *"first level"* of the enumext environment and the enumext* environment. When this is set the label, font, wrap-label and wrap-label* keys are executed within `\makebox` for the enumext and keyans environments.

🔷 This key is intended for compatibility with *tagged* PDF and is forcibly *"enabled"* when `\DocumentMetadata` is present. If you want to get the same document output whether `\DocumentMetadata` is active or not, you must enable this key.

🔵 In the enumext* and keyans* environments `\makelabel` are redefined using `\makebox` by default. If enumext or keyans is used in the enumext* environment the key must be activated manually.

label = {⟨`\alph*` | `\Alph*` | `\arabic*` | `\roman*` | `\Roman*` ⟩}   default: *by levels*

Sets the ⟨label⟩ that will be printed at the *current level* and default value for labelwidth key. The default value for the first level of the environments enumext and enumext* are `\arabic*.`, for second level are `(\alph*)`, for third level are `\roman*.` and for fourth level are `\Alph*.`. For keyans and keyans* environments the default value is `\Alph*)`.

🔵 This key is intended to give the basic structure with which the ⟨label⟩ will be displayed, and the form in which it is used by standard *"label and ref"* and the *"internal label and ref"* system with the save-ref key. You cannot use commands with ⟨label⟩ as an argument, for example `\emph{⟨\alph*⟩}` will return an error. For full customization of how ⟨label⟩ is displayed use the font, wrap-label and/or wrap-label* keys.

labelsep = {⟨rigid length⟩}   default: `0.3333em`

Sets the *horizontal space* between the box containing the current ⟨label⟩ defined by label key and the text of an item on the first line. Internally sets the value of `\labelsep` for the current level.

labelwidth = {⟨rigid length⟩}   default: *by label*

Sets the *width* of the box containing the current ⟨label⟩ set by the label key. Internally sets the value of `\labelwidth` for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter set by label key using '0' for `\arabic*`, 'M' for `\Alph*`, 'm' for `\alph*`, 'VIII' for `\Roman*` and 'viii' for `\roman*`.

widest = {⟨integer | string⟩}   default: *empty*

Sets the labelwidth key pass the ⟨integer⟩ or converting the ⟨string⟩ of the form `\Alph`, `\alph`, `\Roman` or `\roman` to a *value* for the current counter defined by label key, then calculating the *width* by means of a box. For example `widest={XXIII}` or `widest={23}` are equivalent. This key is useful when the default values of the labelwidth key are smaller than those actually used.

font = {⟨font commands⟩}   default: *empty*

Sets the *font style* for the current ⟨label⟩ defined by label key. For example `font={\bfseries\small}`.

align = {⟨left | right | center⟩}   default: *left*

Sets the *aligned* of ⟨label⟩ defined by label key on the current level in the label box.

wrap-label = {⟨code {#1} more code⟩}   default: *empty*

Wraps the *current* ⟨label⟩ defined by label key referenced by {#1} after executing the align and font keys. The {⟨code⟩} must be passed between braces and this does not modify the value set by the labelwidth key and is applied *only* on `\item` and `\item*`. When using it in the `\setenumext` command it is necessary to use the *double* '{##1}'. For example `wrap-label={\fbox{#1}}` or you can create a command:

```
\NewDocumentCommand \mywrap { s m }
  {
    \IfBooleanTF{#1}
      {\textcolor{red}{\textbf{Q}}\textcolor{blue}{\textbf{.}}\textcolor{gray}{#2}}
      {\textcolor{blue}{\textbf{Q}}\textcolor{red}{\textbf{.}}\textcolor{gray}{#2}}
  }
```

and then pass it through the key `wrap-label={\mywrap{#1}}` or `wrap-label={\mywrap*{#1}}`.

wrap-label* = {⟨*code* {#1} *more code*⟩} *default: empty*

The same as the `wrap-label` key but also applies on `\item[⟨custom⟩]`.

ref = {⟨*code* {\alph*| \Alph*| \arabic*| \roman*| \Roman*} *more code*⟩} *default: empty*

Modifies the way *cross references* are displayed. The `label` key sets the default form of the *cross references*, by using this key you can define a different format, for example: `ref=\emph{⟨\alph*⟩}` is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment `enumext` the command `\theenumXi` is modified when the key is executed at the first level, `\theenumXii` when it is executed at the second level and `\theenumXiii` together with `\theenumXiv` when it is executed at the third and fourth levels.

🎯 This must be kept in mind, since the values set by the `label` and `ref` keys are not cumulative by levels, so if you have used the `ref` key in the first level and then want to associate the counter with `label` or `ref` in the second level you must use the direct commands, i.e. `\arabic{eunumXi}` to indicate the count of the first level instead of using `\theenumXi`.

5.2 Keys for penalties

Page breaks in the provided environments are controlled by the following three parameters, which work together to ensure they look good, avoiding unsightly page breaks that could distort the output.

beginpenalty = {⟨*integer*⟩} *default: -51*

Set the *page breaking* penalty for breaking at the beginning of the `enumext`, `enumext*`, `keyans`, and `keyans*` environments. Internally sets the value of `\@beginparpenalty`.

midpenalty = {⟨*integer*⟩} *default: -51*

Set the *page breaking* penalty for breaking between items of the `enumext`, `enumext*`, `keyans`, and `keyans*` environments. Internally sets the value of `\@itempenalty`.

endpenalty = {⟨*integer*⟩} *default: -51*

Set the *page breaking* penalty for breaking at the end of the `enumext`, `enumext*`, `keyans`, and `keyans*` environments. Internally sets the value of `\@endparpenalty`.

🎯 The values passed to these ⟨*keys*⟩ affect the nested environments in which they were set and cannot be reset. LATEX default is `-\@lowpenalty`, that is, `-51`. Because it is negative, it somewhat encourages a page break at each spot. Change it with, e.g., `\@beginparpenalty`=9999; a value of `10000` prohibits a page break. Please, refer to your LATEX or TEX manual about how penalties control page breaks.

5.3 Keys for spaces

show-length = {⟨*true* | *false*⟩} *default: false*

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of `\topsep`, `\itemsep`, `\parsep` and `\partopsep`. For *horizontal spaces* show the values of `\labelwidth`, `\labelsep`, `\itemindent`, `\listparindent` and `\leftmargin`.

5.3.1 Vertical spaces

topsep = {⟨*rubber length* | *rigid length*⟩} *default: by levels*

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of `\topsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `8.0pt plus 2.0pt minus 4.0pt`, for second level are `4.0pt plus 2.0pt minus 1.0pt`, for third and fourth level are `2.0pt plus 1.0pt minus 1.0pt`. For `keyans` and `keyans*` environments the default value is `4.0pt plus 2.0pt minus 1.0pt`.

parsep = {⟨*rubber length* | *rigid length*⟩} *default: by levels*

Set the *vertical space* between paragraphs within an item. Internally sets the value of `\parsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `4.0pt plus 2.0pt minus 1.0pt`, for second level are `2.0pt plus 1.0pt minus 1.0pt`, for third and fourth level are `0pt`. For `keyans` and `keyans*` environments the default value is `2.0pt plus 1.0pt minus 1.0pt`.

🎯 In the `enumext*` and `keyans*` environments this value is passed to `\parskip` within the `minipage` environment where *"item content"* is placed.

partopsep = {⟨*rubber length* | *rigid length*⟩} *default: by levels*

Set the *vertical space* added, beyond `topsep`, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a *"blank line"* or `\par` command. Internally sets the value of `\partopsep` for the current level. The default values for first and second level in environment `enumext` are `2.0pt plus 1.0pt minus 1.0pt`, for third and fourth level are `1.0pt minus 1.0pt`. For the `keyans` environment the

default value is `2.0pt plus 1.0pt minus 1.0pt`, and for the `keyans*` and `enumext*` environments it is available but *without* effect.

🔵 The value of this parameter also affects the *inner levels* and the environments `keyans`, `keyanspic` and `keyans*`. Caution should be taken with *"blank lines"* or `\par` command *"before"* each environment or nested level when formatting the source code of document. TEX will enter ⟨*vertical mode*⟩ and apply this value to the "top" and "bottom" the environment or nested level.

`itemsep` = {⟨*rubber length | rigid length*⟩} default: *by levels*

Set the *vertical space* between items, beyond the `parsep`. Internally sets the value of `\itemsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are `4.0pt plus 2.0pt minus 1.0pt`, for the rest of the levels are `2.0pt plus 1.0pt minus 1.0pt`. For `keyans` and `keyans*` environments the default value is `4.0pt plus 2.0pt minus 1.0pt`.

🟢 In the `enumext*` and `keyans*` environments this value corresponds to the separation between rows.

`noitemsep` ⟨*value forbidden*⟩ default: *not used*

This is a *"meta-key"* that does not receive an argument. Set `itemsep` and `parsep` equal to `0pt` the entire level of environment.

`nosep` ⟨*value forbidden*⟩ default: *not used*

This is a *"meta-key"* that does not receive an argument. Sets all keys for vertical spacing equal to `0pt` the entire level of environment.

`base-fix` ⟨*value forbidden*⟩ default: *not used*

This is a *"switch-key"* that does not receive an argument available *only* for the *"first level"* of environment `enumext`. Fix the *baseline* when an environment `enumext` is nested in `enumext*` and there is no material between the `\item` and the start of the environment for example `\item \begin{enumext}` within the environment `enumext*`. Internally sets the keys `topsep`, `above` and `above*` at `0pt`.

🔵 This key is provided as a way to work around this minor issue, but you should be aware that if for some reason you have the `itemindent` key set in the `enumext*` environment it will be lost and you will need to adjust it using the `list-offset` key in the `enumext` environment.

Extra vertical spaces

🔵 The following ⟨*keys*⟩ should be used with *"caution"*, they are intended to be used at the "top" and "bottom" of the environment when the `columns` or `mini-env` keys do not provide adequate *vertical spaces*. The values passed can be *rubber* or *rigid* lengths, the way they are applied is the way you differ, using the *star* '*' ⟨*keys*⟩ applies `\vspace*` so that LATEX does *not discard* this space at page break.

`above` = {⟨*rubber length | rigid length*⟩} default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is *"discardable"*.

`above*` = {⟨*rubber length | rigid length*⟩} default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is *"not discardable"*.

`below` = {⟨*rubber length | rigid length*⟩} default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is *"discardable"*.

`below*` = {⟨*rubber length | rigid length*⟩} default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is *"not discardable"*.

5.3.2 Horizontal spaces

`list-offset` = {⟨*rigid length*⟩} default: *0pt*

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the `labelwidth` key. Internally sets the values of `\leftmargin` and `\itemindent` for the current level.

`list-indent` = {⟨*rigid length*⟩} default: *labelwidth + labelsep*

Sets the *indentation* of the whole environment under the box defined by `labelwidth` and `labelsep` keys. Internally sets the value of `\leftmargin` and `\itemindent` for the current level. If `list-indent=0pt` is set in the environments `enumext` and `keyans` the ⟨*label*⟩ will be part of the text, separated by the value of the `labelsep` key and the *first word*, in simple terms it will look like a *"common paragraph"*.

🔵 The `enumext*` and `keyans*` environments are implemented using `\makebox` and `minipage` which causes *"list indent"* to always be equal to the value passed to `labewdith` plus `labelsep`. Passing a value to this key is equivalent to setting the value for the `list-offset` key.

itemindent = {⟨*rigid length*⟩}   default: *0pt*

Sets the extra *horizontal indentation*, beyond `labelsep`, of the *"first line"* off each `\item` that is not followed by a *"blank line"* or the `\par` command . This value must be greater than or equal to `0pt` and is applied internally using `\hspace` *without* modifying the value of `\itemindent`.

🟢 This key is intended for the `enumext*` and `keyans*` environments where, by their implementation, it is not possible to adjust `labelwidth` and `list-indent` *without* modifying the output. If you use `enumext` or `keyans` and want to get around the *blank line* limitation or the `\par` command followed by `\item` you can modify `labelwidth` and `list-indent` and get the same effect.

rightmargin = {⟨*rigid length*⟩}   default: *0pt*

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to `0pt`. Internally sets the value of `\rightmargin` for the current level.

listparindent = {⟨*rigid length*⟩}   default: *0pt*

Sets the *horizontal space* indentation, beyond `list-indent`, for second and subsequent paragraphs within a list item. Internally sets the value of `\listparindent` for the current level.

🟢 In the `enumext*` and `keyans*` environments this value is passed to `\parindent` within the `minipage` environment where *"item content"* is placed.

5.4   Keys for add code

The following ⟨*keys*⟩ should be used with *"caution"*, they are intended to inject {⟨*code*⟩} into different parts of the defined environments. We must keep in mind that the defined environments are based on the `list` base environment provided by LATEX which is defined (simplified) as plain form `\list`{⟨*arg one*⟩}{⟨*arg two*⟩}. Using the `before*` key does not allow access to the `list` parameters defined by [⟨*key = val*⟩].

before = {⟨*code*⟩}   default: *not used*

Execute {⟨*code*⟩} *"before"* the environment starts. The {⟨*code*⟩} must be passed between braces, is executed *"after"* all calculations related to the *list parameters* in the environment and the ⟨*keys*⟩ sets by [⟨*key = val*⟩] have been performed, with the exception of the ⟨*keys*⟩ `start` and `start*`, that is, in the *second argument* of the list: `\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩{⟨*code*⟩}}.

before* = {⟨*code*⟩}   default: *not used*

Execute {⟨*code*⟩} *"before"* the environment starts. The {⟨*code*⟩} must be passed between braces, is executed *"before"* performing all calculations related to the *list parameters* and the ⟨*keys*⟩ sets in [⟨*key = val*⟩] of the environment that is, *"before"* the arguments defining the list environment are executed: {⟨*code*⟩}`\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩}.

first = {⟨*code*⟩}   default: *not used*

Executes {⟨*code*⟩} when *"starting"* the environment. The {⟨*code*⟩} must be passed between braces, is executed right *"after"* all *list parameters* are done, after the second argument of list, just before the first occurrence of `\item`: `\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩}{⟨*code*⟩}`\item`.

🟢 Keep in mind that the {⟨*code*⟩} set in this ⟨*key*⟩ will affect the entire *"body"* of the environment and therefore the inner levels of the list and the `keyans`, `keyans*` and `keyanspic` environments. It is recommended to set this ⟨*key*⟩ per level. In the `enumext*` and `keyans*` environments this ⟨*key*⟩ is executed *"after"* the `listparindent`, `parsep` and `itemindent` ⟨*keys*⟩ within the `minipage` environment in which the *"item content"* is placed.

after = {⟨*code*⟩}   default: *not used*

Execute {⟨*code*⟩} *"after"* finishing the environment. The {⟨*code*⟩} must be passed between braces.

5.5   Keys for `start`, `series` and `resume`

start = {⟨*integer | integer expression*⟩}   default: *1*

Sets the *start value* of the numbering on the *"current level"*. The {⟨*integer expression*⟩} must be passed between braces, internally is evaluated and pass to the *"counter"* defined by `label` key on the current level, i.e. it is equivalent to enter `start={\dimeval{100*\value{chapter}}` or `start={100*\value{chapter}}`.

start* = {⟨*integer | string*⟩}   default: *not used*

Sets the *start value* of the numbering on the *"current level"*. Internally ⟨*string*⟩ is converted and passed as value to the *"counter"* defined by `label` key on the current level, i.e. it is equivalent to enter `start*=5`, `start*=E` or `start*=v`.

🔵 For compatibility with *tagged* PDF, the *start value* are set *"after"* the *second argument* to the `list` environment and *"before"* the execution of the first `\item` and the `first` key: `\begin{list}`{⟨*arg one*⟩}{⟨*arg two*⟩}`\setcounter{enumX}\item`.

🟢 The following ⟨*keys*⟩ are available only for the `enumext` and `enumext*` environments.

series = {⟨*series name*⟩}   default: *not used*

Stores the *keys* of the *optional argument* of the *"current level"* of the environment in which it is executed in {⟨*series name*⟩} which is used as an *argument* in the `resume` key. The ⟨*keys*⟩ stored in {⟨*series name*⟩} are NOT cumulative and are overwritten if the same {⟨*series name*⟩} is used again at the *"same level"* at which the key was executed.

🟢 For security reasons the `series` key will never save in {⟨*series name*⟩} the ⟨*keys*⟩ `series`, `resume`, `resume*`, `reset`, `reset*`, `save-ans`, `save-key`, `start*` and `start`.

resume = {⟨*series name*⟩}   default: *not used*

Sets the *start value* and *options* for the *"current level"* continuing the numbering and *options* of the *"same level"* as the environment in which the `series`={⟨*series name*⟩} key was executed, the *start value* will continue numbering according to the last execution of `resume`={⟨*series name*⟩}. If passed *"without value"* this will only set *start value* continue the numbering of the *"same level"* from the last environment and level in which `series`={⟨*series name*⟩} or `resume`={⟨*series name*⟩} is NOT present and if the `save-ans` key is active (on the left) it will continue the numbering from the "last" environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

🎯 The `resume` key passed *"without value"* must be exactly *"without value"*, i.e. `resume=` cannot be used and if executed before `resume*` it will affect the *start value*.

resume*   ⟨*value forbidden*⟩   default: *not used*

Sets the *start value* and *options* for the *"current level"* continuing the numbering and options of the *"same level"* as the last environment and level in which the `series`={⟨*series name*⟩} or `resume`={⟨*series name*⟩} keys are NOT present and if the `save-ans` key is active (on the left) it will continue the numbering and options from the "last" environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

🎯 When using the key `resume`={⟨*series name*⟩} or `resume*` you will have hierarchy in the ⟨*keys*⟩ that are stored in {⟨*series name*⟩} or in an internal version of {⟨*series name*⟩} in the case of `resume*`. If you want to *reset* the value of a ⟨*key*⟩ that is already stored in {⟨*series name*⟩} or in an internal version of {⟨*series name*⟩} this must be placed to the *right* of the key `resume`={⟨*series name*⟩} or `resume*`.

5.6 Keys for reset

reset   ⟨*value forbidden*⟩   default: *not used*

Resets the *start value* of the *"counters"* in the `enumext` and `enumext*` environments along with the *"internal counters"* used by the `resume` *without value* and `resume*` keys at the *"level"* at which it is executed. The *start value* can be overwritten using the `start` or `start*` keys.

reset*   ⟨*value forbidden*⟩   default: *not used*

Resets the *start value* of the *"counters"* in the `enumext` and `enumext*` environments along with the *"internal counters"* used by the `resume` *without value* and `resume*` keys at the *"level"* at which it is executed and in the *"levels below"* it in the case of the `enumext` environment. The *start value* can be overwritten using the `start` or `start*` keys.

🎯 These keys are intended to be used in cases where the `\resetenumext` command does not work, e.g. after an unnumbered chapter. It should preferably be set *only* on the *first level*, although it is available for all levels.

5.6.1 The command `\resetenumext`

`\resetenumext`

```
\resetenumext[⟨1⟩]{⟨some counter⟩}        \resetenumext[⟨4⟩]{⟨some counter⟩}
\resetenumext[⟨2⟩]{⟨some counter⟩}        \resetenumext[⟨*⟩]{⟨some counter⟩}
\resetenumext[⟨3⟩]{⟨some counter⟩}        \resetenumext*{⟨some counter⟩}
```

The `\resetenumext` command *"resets"* the *start value* of the *"counters"* for the `enumext` and `enumext*` environments along with the *"internal counters"* used by the keys `resume` *without value* and `resume*` according to the value of {⟨*some counter*⟩}. For example `\resetenumext{chapter}` will *"reset"* the numbering of *"all levels"* of the `enumext` environment for each execution of a *"numbered"* chapter.

The *optional argument* of the form [1], [2], [3], [4] *"reset"* the values for levels 1, 2, 3 and 4 of the `enumext` environment, the form [*] *"reset"* the values for the `enumext*` environment. If is run *without* the *optional argument*, it will *"reset"* the values for *"all levels"* of the `enumext` environment.

The *starred argument* '*' will *"reset"* the values for *"all levels"* of the `enumext` and `enumext*` environments.

5.7 Keys for multicols

columns = {⟨*integer*⟩}   default: *1*

Set the *number of columns* to be used by the `multicols` environment within the environments `enumext` and `keyans`. The value must be a positive integer less than or equal to 10. In the `enumext*` and `keyans*` environments they correspond to the default number of columns (without joining) and internally adjust the value of `\itemwidth`.

columns-sep = {⟨*rigid length*⟩}   default: *by level*

Set the *space between* columns used by the `multicols` environment within the environments `enumext` and `keyans`. Internally sets the value of `\columnsep`, by default its value is equal to the sum of the values set in the keys `labelwidth` and `labelsep` of the current level. In the `enumext*` and `keyans*` environments they correspond to the *space between* columns (without joining) and internally adjust the value of `\itemwidth`.

5.8 Keys for `minipage`

`mini-env` = {⟨*rigid length*⟩}   default: *not used*

Sets the *width* of the `minipage` environment on the *"right side"*. This value added to the value set by the `mini-sep` key to determines the *width* of the `minipage` environment on the *"left side"*, taking `\linewidth` as the maximum reference value.

`mini-sep` = {⟨*rigid length*⟩}   default: *0.3333em*

Sets the *space between* the `minipage` environment on the *"left side"* and the `minipage` environment on the *"right side"*. This separation is applied together with `\hfill`.

5.8.1 The command `\miniright`

`\miniright` `\begin{enumext}[mini-env={`⟨*rigid length*⟩`}]` ⟨*item's before*⟩ `\item \miniright` ⟨*content*⟩ `\end{enumext}`
`\begin{enumext}[mini-env={`⟨*rigid length*⟩`}]` ⟨*item's before*⟩ `\item \miniright*`⟨*content*⟩ `\end{enumext}`

The `\miniright` command close the `minipage` environment on the *"left side"* and opens the `minipage` environment on the *"right side"* by starting it with the `\centering` command. It must be placed *"after"* the last `\item` of the current environment and *"before"* starting the material to be placed on the *"right side"*.

The *starred argument* '*' inhibits the use of `\centering` command i.e. the usual LaTeX justification is maintained in the `minipage` on the *"right side"*.

5.8.2 The key `mini-right`

In the *horizontal list environments* `enumext` and `keyans` it is not possible to use the `\miniright` command and the `mini-right` key must be used instead.

`mini-right` = {⟨*content*⟩}   default: *not used*

Set the *content* for the drawing or tabular to be placed in the `minipage` environment on the *"right side"* by starting it with `\centering`. The {⟨*content*⟩} must be passed between braces.

`mini-right*` = {⟨*content*⟩}   default: *not used*

Same as above, but *without* starting with `\centering`.

6 The storage system

The entire mechanism for *"storing content"* it is activated according to `save-ans` key on the *"first level"* of `enumext` or `enumext*` environments and it is ignored if they are established when they are nested inside each other. Only when this ⟨*key*⟩ is *"active"* the `\anskey` command and the environments `anskey*`, `keyans`, `keyans*` and `keyanspic` are available.

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{keyans}
      ...
    \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{keyanspic}
      ...
    \end{keyanspic}
\end{enumext}
```

By executing the key `save-ans={`⟨*store name*⟩`}` the entire *"structure"* of the environment (excluding the *first level*) including the *optional argument* passed to the inner levels or the environment nested in it, along with the ⟨*content*⟩ passed to `\anskey` or `anskey*`, the current ⟨*labels*⟩ for `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` will be *"stored"* in a *sequence* {⟨*store name*⟩} and at the same time will be *"stored"* (without the *"structure"* or *optional argument*) in a *prop list* {⟨*store name*⟩}.

For security reasons the *optional argument* of the inner levels or the nested environment are *filtered* by excluding all ⟨*keys*⟩ related to the *"storage system"* (§6.1) along with the keys `mini-env`, `mini-sep`, `mini-right`, `mini-right*`, `series`, `resume` and `resume*` when storing in *sequence* {⟨*store name*⟩} set by `save-ans` key.

6.1 Keys for storage system

The only ⟨*keys*⟩ available for all levels of the `enumext` environment and the `enumext*` environment are `no-store` and `save-key`, the rest of the ⟨*keys*⟩ described in this section must be passed directly in the *optional argument* of the *"first level"* of the environment in which the key `save-ans` is executed. The key `save-ans` should NOT be passed with the command `\setenumext`.

`save-ans` = {⟨*store name*⟩}   default: *not set*

Sets the *name* of the *sequence* and *prop list* in which the {⟨*contents*⟩} will be *"stored"* by `\anskey` and `anskey*` in `enumext` and `enumext*` environments and the current ⟨*labels*⟩ for `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic`. If the *sequence* or *prop list* {⟨*store name*⟩} does not exist, it will be created globally and will not be *overwritten* if the key is used again.

`save-key` = {⟨*key list*⟩}   default: *not set*

This key *overrides* the default *"stored keys"* of the *optional argument* of the inner levels or nested environment that will be passed to the *sequence*. The ⟨*key list*⟩ passed to this key ignores any ⟨*keys*⟩ in the *"stored structure"* and must be passed between braces. For example, if we execute at a second level:

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{enumext}[nosep, columns=2, save-key={columns=3}]
        ...
    \end{enumext}
  \end{enumext}
```

The *"stored keys"* by default in the *sequence* {⟨*store name*⟩} would be `nosep, columns=2`, but using the key `save-key={columns=3}` will overwrite and the *"stored key"* in the *sequence* {⟨*store name*⟩} are only `columns=3` ignoring all the others.

save-sep = {⟨*text symbol*⟩}   default: *{, }*

Sets the *text symbol* that will separate the current ⟨*label*⟩ to the *optional argument* passed to the `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` and storing them in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. The {⟨*text symbol*⟩} must always be passed between braces, whitespace '␣' is preserved within the braces and only affects the *"stored content"* and not what is displayed when using the `show-ans` or `show-pos` keys.

no-store ⟨*value forbidden*⟩   default: *not used*

This is a *"switch-key"* that does not receive an argument and disables the *"storing content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested `enumext` or `enumext*` environments in which you want to use `enumext` or `enumext*` but *"without"* using the `\anskey` command or use `anskey*` environment and *"without"* interfering with the `check-ans` key.

6.1.1 Keys for `label` and `ref`

save-ref = {⟨*true* | *false*⟩}   default: *false*

Activates the *"internal label and ref"* mechanism for referencing *"stored content"* in *prop list* {⟨*store name*⟩} set by `save-ans` key. To reference the location of the *"stored content"* within the environment you must use `\ref{⟨store name : position⟩}`, where ⟨*position*⟩ corresponds to the position occupied by the *"stored content"* in the *prop list* {⟨*store name*⟩} returned by the `show-pos` key. For example `\ref{test:4}` will return `3.(b)` which corresponds to the location of the *"stored content"* at position 4 in *prop list* `test` within the environment in which the key `save-ans=test` was set.

mark-ref = {⟨*symbol*⟩}   default: *\textreferencemark*

Sets the *symbol* that will be displayed by the `\printkeyans` command only if the `hyperref` package is detected and the `save-ref` key are active. This *"symbol"* is used as a *"link"* between the environment in which the `save-ans` key was used and the place where the command is executed.

6.1.2 Keys for `wrap` and `marks`

The enumext package provides a set of ⟨*keys*⟩ to set and manipulate *"symbol marks"* associated with *"answers"* and how they are displayed and stored in the *sequence* and *prop list*.

The ⟨*keys*⟩ available for the `\anskey` command and the `anskey*` environment can be passed *"only"* in the *optional argument* in the *"first level"* of the `enumext` or `enumext*` environment.

The ⟨*keys*⟩ available for the `keyans` and `keyans*` environments can be passed locally in the *optional argument*, at the *"first level"* of the `enumext` or `enumext*` environment or via the `\setenumext` command with one minor difference, when ⟨*keys*⟩ are passed through the *"first level"* of the `enumext` or `enumext*` environment they are set in *"both"* environments, but when they are passed using the `\setenumext` command they are set *"individually"* in each environment.

show-ans = {⟨*true* | *false*⟩}   default: *false*

Display the *symbol* set by the `mark-ans` key to the left of the *mandatory argument* ⟨*content*⟩ passed to the `\anskey` command and ⟨*body*⟩ for the `anskey*` environment using the `wrap-ans` key if set.

For `\item*` and `\anspic*` the `keyans`, `keyans*` and `keyanspic` environments it will display the *symbol* set by the `mark-ans*` key to the left of the current ⟨*label*⟩ and *optional argument*. If the *optional argument* is present in `\item*` or `\anspic*` it will be shown using `wrap-opt` key.

Keys for `\anskey` and `anskey*`

mark-ans = {⟨*symbol*⟩}   default: *\textasteriskcentered*

Sets the *symbol* to be displayed in the left margin for `\anskey` command and `anskey*` environment when using the key `show-ans`. The *"symbol"* is placed in a box of width equal to the value of `labelwidth` at the current level, separated by the value of the key `mark-sep` and aligned by the value of the key `mark-pos`. This key is not affected by the keys `font` or `wrap-label` so if you want to apply *styling* you have to do it directly, for example: `mark-ans={\textcolor{red}{\textbf{\textasteriskcentered}}`

mark-pos = {⟨*left* | *right* | *center*⟩}   default: *left*

Sets the *aligned* of the *"symbol"* defined by `mark-ans` key for `\anskey` command and `anskey*` environment. The *"symbol"* is aligned in a box with the same dimensions of the label box defined by `labelwidth` key on the current level and separated by the value of the `mark-sep` key.

mark-sep = {⟨*rigid length*⟩}   default: *labelsep*

Sets the *horizontal space* between the box containing the *"symbol"* defined by mark-ans key and the *mandatory argument* ⟨*content*⟩ passed to the \anskey command and the *body* in anskey* environment.

wrap-ans = {⟨*code* {#1} *more code*⟩}   default: *\fbox+\parbox{#1}*

Wraps the *mandatory argument* ⟨*content*⟩ passed to the \anskey and the ⟨*body*⟩ in anskey* environment referenced by {#1} when using the show-ans or show-pos keys. The {⟨*code*⟩} must be passed between braces and only affects how the *argument* or *body* is displayed and NOT the *"stored content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key. If this key is passed using \setenumext it is necessary to use double '{##1}'.

Keys for keyans, keyans* and keyanspic

mark-ans* = {⟨*symbol*⟩}   default: *\textasteriskcentered*

Sets the *symbol* to be displayed in the left margin for \item* and \anspic* for the keyans, keyans* and keyanspic environments when using the key show-ans. The *"symbol"* is placed in a box of width equal to the value of labelwidth of the environment in which it is executed, separated by the value of the key mark-sep* and aligned by the value of the key mark-pos*. This key is not affected by the keys font or wrap-label so if you want to apply *styling* you have to do it directly, for example: mark-ans*={\textcolor{red}{\textbf{\textasteriskcentered}}}.

mark-pos* = {⟨*left* | *right* | *center*⟩}   default: *left*

Sets the *aligned* of the *"symbol"* defined by mark-ans* key for the keyans, keyans* and keyanspic environments. The *"symbol"* is aligned in a box with the same dimensions of the label box defined by labelwidth key of the environment in which it is executed and separated by the value of the mark-sep* key.

mark-sep* = {⟨*rigid length*⟩}   default: *labelsep*

Sets the *horizontal space* between the box containing the *"symbol"* defined by mark-ans* key and the current ⟨*label*⟩ for \item* and \anspic* in the keyans, keyans* and keyanspic environments.

wrap-ans* = {⟨*code* {#1} *more code*⟩}   default: *not used*

Wraps the *current* ⟨*label*⟩ when using the show-ans key for \item* and \anspic* referenced by {#1} in the keyans, keyans* and keyanspic environments after executing the align and font keys. The {⟨*code*⟩} must be passed between braces and *only* affects how the ⟨*label*⟩ is displayed and NOT the *"stored label"* in the *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key. This key overwrites the key wrap-label and if is passed using \setenumext it is necessary to use double '{##1}'. For example, if you want the ⟨*label*⟩ to be displayed in red when using show-ans you just set wrap-ans*={\textcolor{red}{#1}}.

wrap-opt = {⟨*code* {#1} *more code*⟩}   default: *[[#1]]*

Wraps the *optional argument* passed to the \item* and \anspic* referenced by {#1} in the keyans, keyans* and keyanspic environments when using the show-ans or show-pos keys. The {⟨*code*⟩} must be passed between braces and only affects the current *optional argument* and NOT the *"stored content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key. If this key is passed using \setenumext it is necessary to use double '{##1}'.

6.1.3 Keys for debug and checking

show-pos = {⟨*true* | *false*⟩}   default: *false*

Displays the *position* occupied by the *"stored content"* by \anskey, anskey*, \item* and \anspic* in the *prop list* {⟨*store name*⟩} set by save-ans key. This position is used by the \getkeyans command and by the \ref command if the save-ref key is active.

check-ans = {⟨*true* | *false*⟩}   default: *false*

Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each \item or \item* that does not open an inner level or nested environment contains *"only one answer"* or *"only one execution"* of the \anskey or anskey*. It is intended to be used in conjunction with the no-store key.

6.2 The command \anskey

\anskey   \anskey[⟨*keys*⟩]{⟨*content*⟩}

The command \anskey takes a mandatory non empty argument {⟨*content*⟩} and *"stores"* it in the *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key. By design the command cannot be nested or passed *verbatim material* in the argument and it is assumed that each *numbered* \item or \item* within the environment in which it is active it has a *"single execution"* of \anskey unless \item or \item* open a nested level or use the no-store key.

If save-ref key are active and the hyperref[8] package is detected, \hyperlink and \hypertarget will be used, otherwise the usual *"label and ref"* system provided by LATEX will be used.

The \anskey command is available for all levels of the enumext environment and the enumext* environment, but is disabled for the keyans, keyans* and keyanspic environments.

6.2.1 Keys for \anskey

By default the *mandatory argument* ⟨*content*⟩ passed to \anskey when *"storing"* in the *sequence* {⟨*store name*⟩} has the form \item ⟨*content*⟩, the following ⟨*keys*⟩ allow modifying the way in which it is *"stored"* in the *sequence.*

break-col ⟨*value forbidden*⟩ default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \columnbreak \item ⟨*content*⟩.

item-join = {⟨*columns*⟩} default: *not set*

Set the *number of columns* to be used for \item(⟨*columns*⟩) and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item(⟨*columns*⟩) ⟨*content*⟩.

item-star ⟨*value forbidden*⟩ default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item* ⟨*content*⟩.

item-sym* = {⟨*symbol*⟩} default: *not set*

Sets the *symbol* for \item* when using the key item-star and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item*[⟨*symbol*⟩] ⟨*content*⟩. The *symbol* can be in text or math mode, for example item-sym*={$\ast$} stores \item*[$\ast$] ⟨*content*⟩.

item-pos* = {⟨*rigid length*⟩} default: *not set*

Sets the *offset* for \item* when using the keys item-star and item-sym* and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form \item*[⟨*symbol*⟩][⟨*offset*⟩] ⟨*content*⟩.

Example

```
\begin{enumext}[save-ans=test,show-ans=true]
  \item* Text containing our instructions or questions. \anskey{⟨first answer⟩}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{⟨second answer⟩}
    \end{enumext}
  \item Text containing our instructions or questions. \anskey{⟨third answer⟩}
  \item Text containing our instructions or questions. \anskey{⟨fourth answer⟩}
\end{enumext}
```

⋆ 1. Text containing our instructions or questions.
  ∗ | first answer |
2. Text containing our instructions or questions.
  (a) Question.
    ∗ | second answer |

3. Text containing our instructions or questions.
  ∗ | third answer |
4. Text containing our instructions or questions.
  ∗ | fourth answer |

6.3 The environment anskey*

anskey* \begin{anskey*}[⟨*key = val*⟩] ⟨*body content*⟩ \end{anskey*}

The environment anskey* takes a mandatory {⟨*body content*⟩} and *"stores it"* in the *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key. If save-ref key are active and the hyperref[8] package is detected \hyperlink and \hypertarget will be used, otherwise the usual *"label and ref"* system provided by LaTeX will be used.

By design the environment cannot be nested but full supports *"verbatim material"* in the ⟨*body*⟩ and it is assumed that *"each numbered"* \item or \item* within the environment in which it is active it has a *"single execution"* unless \item or \item* open a nested level or use the no-store key.

The anskey* environment is implemented using the new *"collect code"* c-type argument part of LaTeX release 2025-06-01[13]. \begin{anskey*} and \end{anskey*} must be in different lines and should not appear within verbatim environments or commands. All ⟨*keys*⟩ must be passed separated by commas and "without separation" of the start of the environment.

Comments "%" or "any character" after \begin{anskey*} or [⟨*key = val*⟩] on the same line are NOT supported, LaTeX will return an "error" message if this happens. In a similar way comments "%" or "any character" after \end{anskey*} on the same line LaTeX will return a "warning" message.

6.3.1 Keys for anskey*

The anskey* environment uses the same ⟨*keys*⟩ as the \anskey command next to the ⟨*keys*⟩ write-env, overwrite and force-eol. The environment is available for all levels of the enumext environment and the enumext* environment, but it is disabled for the keyans, keyans* and keyanspic environments.

write-env = {⟨*file.ext*⟩} default: *not used*

Sets the *name* of the ⟨*external file*⟩ in which the ⟨*contents*⟩ of the environment will be written. The ⟨*file.ext*⟩ will be created in the working directory, relative or absolute paths are not supported. If ⟨*file.ext*⟩ does not exist, it will be created or overwritten if the overwrite key is used.

overwrite = { ⟨*true* | *false*⟩ } 　　　　　　　　　　　　　　　　　　　　　　　　　　default: *false*

Sets whether the ⟨*file.ext*⟩ generated by `write-env` from the `anskey*` environment will be rewritten.

force-eol = { ⟨*true* | *false*⟩ } 　　　　　　　　　　　　　　　　　　　　　　　　　　default: *false*

Sets if the *last end of line* for the ⟨*stored content*⟩ is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the `fancyvrb` package as `\end{Verbatim}` or another environment that does not support a comments "%" after closing `\end{Verbatim}`%.

Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.
    \begin{anskey*}[item-star]
      ⟨first answer⟩
    \end{anskey*}

  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.
        \begin{anskey*}
          ⟨second answer⟩
        \end{anskey*}
    \end{enumext}

  \item Text containing our instructions or questions.
    \begin{anskey*}
      ⟨third answer⟩
    \end{anskey*}

  \item Text containing our instructions or questions.
    \begin{anskey*}
      ⟨fourth answer⟩
    \end{anskey*}
\end{enumext}
```

★ 5. Text containing our instructions or questions. 　　　7. Text containing our instructions or questions.

[5] | First answer with `verbatim` | 　　　[7] | third answer |

6. Text containing our instructions or questions. 　　　8. Text containing our instructions or questions.

　　(a) Question. 　　　[8] | fourth answer |

　　　[6] | second answer |

6.4　The environments keyans and keyans*

keyans 　`\begin{keyans}`[`[`⟨*key = val*⟩`]`] `\item` `\item[`⟨*custom*⟩`]` `\item*` `\item*[`⟨*content*⟩`]` `\end{keyans}`
keyans* 　`\begin{keyans*}`[`[`⟨*key = val*⟩`]`] `\item` `\item[`⟨*custom*⟩`]` `\item*` `\item*[`⟨*content*⟩`]` `\end{keyans*}`

The `keyans` and `keyans*` environments are *"enumerated list"* environments designed for *"multiple choice"* questions activated by the `save-ans` key.

This environments can NOT be nested and must always be at the *"first level"* of the `enumext` environment, the commands `\item` and `\item[`⟨*custom*⟩`]` work in the usual and the command `\item(`⟨*columns*⟩`)` is available for the `keyans*` environment.

💣 The behavior of `\item*` in `keyans` and `keyans*` environments is NOT the same as in the `enumext` or `enumext*` environments.

```
\begin{enumext}[save-ans=test]
  \item ⟨item content⟩
    \begin{keyans}[⟨key = val⟩]
      \item ⟨item content⟩
      \item [⟨custom⟩] ⟨item content⟩
      \item* ⟨item content⟩
      \item*[⟨content⟩] ⟨item content⟩
    \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans=test]
  \item ⟨item content⟩
    \begin{keyans*}[⟨key = val⟩]
      \item ⟨item content⟩
      \item [⟨custom⟩] ⟨item content⟩
      \item* ⟨item content⟩
      \item*[⟨content⟩] ⟨item content⟩
    \end{keyans*}
\end{enumext}
```

The ⟨*keys*⟩ set in the *optional argument* of the environment are the same (almost) as those of the `enumext` and `enumext*` environments and have *higher precedence* than those set by `\setenumext[`⟨*keyans*⟩`]{`⟨*key = val*⟩`}` or `\setenumext[`⟨*keyans**⟩`]{`⟨*key = val*⟩`}`. If the *optional argument* is not passed or the ⟨*keys*⟩ are not set by `\setenumext`, the default values will be the same as the *"second level"* of the `enumext` environment with the difference in the ⟨*label*⟩ which will be set to `label=\Alph*)`.

The keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `save-sep`, `wrap-opt`, `wrap-ans*`, `show-ans` and `show-pos` are available for both environments.

6.4.1 The \item* in keyans and keyans*

\item* \item*
\item*[⟨content⟩]

The \item* and \item*[⟨content⟩] command *"store"* the current ⟨label⟩ set by label key next to the *optional argument* ⟨content⟩ in *sequence* and *prop list* {⟨store name⟩} set by save-ans key in the *"first level"* of the enumext or enumext* environments.

The *starred argument* '*' cannot be separated by spaces '␣' from the command, i.e. \item* and the *optional argument* does "NOT" support *verbatim content.* By design it is assumed that the \item* will only appear *"once"* within the environment.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.

    \begin{keyans*}[nosep,columns=2]
      \item Choice
      \item* Correct choice
      \item Choice
      \item Choice
      \item Choice
    \end{keyans*}

  \item Text containing a question and image.

    \begin{keyans}[nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \item*[⟨note⟩] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

1. Text containing a question.
   - A) Choice   * B) Correct choice
   - C) Choice   D) Choice
   - E) Choice

2. Text containing a question and image.
   - A) Choice
   - B) Choice
   - C) Choice
   - D) Choice
   - * E) [note] Correct choice

   A

   Some text

6.5 The environment keyanspic

keyanspic \begin{keyanspic}[⟨key = val⟩] \anspic*[⟨content⟩]{⟨drawing or tabular⟩} \end{keyanspic}

The keyanspic environment is an *"enumerated list"* environment activated by the save-ans key that has the same configuration for *"spacing"* and ⟨label⟩ as the keyans environment that uses the \anspic command instead of \item. It is intended for placing *drawings or tabular* with ⟨label⟩ centered *above* or *below* in a *single line* or *upper and lower* layout style.

When the keyanspic environment is used *without keys* the ⟨labels⟩ are centered *below* the *drawings or tabular* in a *single line* layout style.

A representation of the output can be seen in the figure 6.
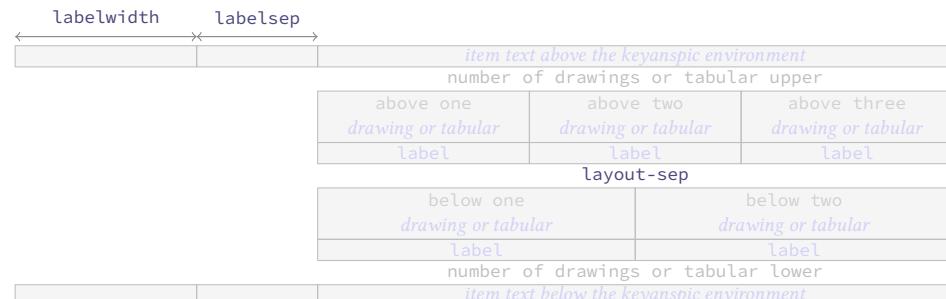

Figure 6: Representation of the keyanspic environment with layout-sty={⟨3, 2⟩} in enumext.

This environment cannot be nested and must *always* be at the *"first level"* of the enumext environment, the \item command is disabled and ⟨keys⟩ cannot be set using \setenumext.

6.5.1 Keys for keyanspic

label-pos = {⟨*above* | *below*⟩}   default: *below*

Set the *position* of ⟨*label*⟩ to be centered "above" or "below" *drawings* or *tabular* when the \anspic command is executed.

label-sep = {⟨*rubber length* | *rigid length*⟩}   default: *internal adjustment*

Set the *vertical* spacing between the ⟨*label*⟩ centered "above" or "below" and *drawings* or *tabular* when running the \anspic command.

layout-sty = {⟨*n° upper* , *n° lower*⟩}   default: *not set*

Set the *number* of *drawings* or *tabular* that will be distributed "upper" and "lower" within the environment when executing the \anspic command. The value must be passed in braces and if not set or the ⟨*n° lower*⟩ is omitted the *drawings* or *tabular* will be put on a *single line*.

layout-sep = {⟨*rubber length* | *rigid length*⟩}   default: *adjusted parsep from keyans*

Set the *vertical separation* between the number of *drawings* or *tabular* placed at the "upper" and "lower" within the environment when executing the \anspic command. Internally adjusts the parsep value taken from the keyans environment.

layout-top = {⟨*rubber length* | *rigid length*⟩}   default: *adjusted topsep from keyans*

Set the *vertical space* added to both the top and bottom of the environment. Internally adjust the value of topsep taken from keyans environment.

The keys mark-ans*, mark-pos*, mark-sep*, save-sep, wrap-opt, wrap-ans*, show-ans and show-pos are available for this environment.

6.5.2 The command \anspic

\anspic   \anspic{⟨*drawing or tabular*⟩}
\anspic*[⟨*content*⟩]{⟨*drawing or tabular*⟩}

The \anspic command take three arguments, the *starred argument* '*' store the current ⟨*label*⟩ next to the *optional argument* ⟨*content*⟩ in *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key.

The *starred argument* '*' cannot be separated by spaces '␣' from the command, i.e. \anspic* and the *optional argument* does "NOT" support *verbatim content*. By design it is assumed that the *starred argument* '*' will only appear *"once"* within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans=true,nosep]
  \item Question with images and labels below.

    \begin{keyanspic}[layout-sty={3,2}]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}

  \item Question with images and labels above.

    \begin{keyanspic}[label-pos=above, layout-sty={3,2},layout-sep=0.25cm]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}

  \item Question with images and labels below on a single line.

    \begin{keyanspic}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}

\end{enumext}
```

1. Question with images and labels below.

A)   B)   C)

D)   ∗ E) [note]
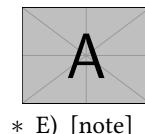

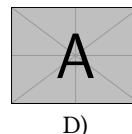

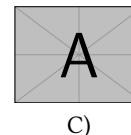

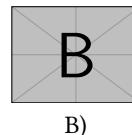

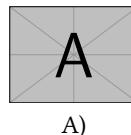

2. Question with images and labels above.

A)   B)   C)

D)   ∗ E) [note]
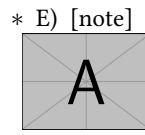

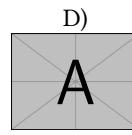

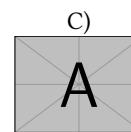

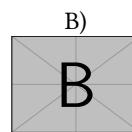

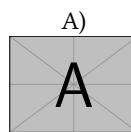

3. Question with images and labels below on a single line.

A)   B)   C)   D)   ∗ E) [note]
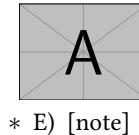

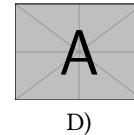

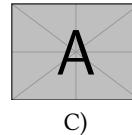

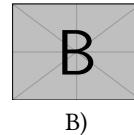

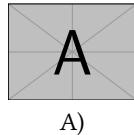

🏷 Remember to pass the `alt={⟨description⟩}` key to the `\includegraphics` command when creating a *tagged* PDF.

6.6 Printing stored content

6.6.1 The command `\getkeyans`

`\getkeyans`   `\getkeyans{`⟨*store name : position*⟩`}`

The command `\getkeyans` prints the *"stored content"* in *prop list* `{`⟨*store name*⟩`}` defined by `save-ans` key in the ⟨*position*⟩ returned by the `show-pos` key.

The *"stored content"* can only be accessed *after* it is stored, if `{`⟨*store name*⟩`}` does not exist the command will return an error.

The form taken by the argument `{`⟨*store name : position*⟩`}` is the same as that used to generate the *"internal label and ref"* system when `save-ref` key are active, so to refer to a *"stored content"*. For example `\getkeyans{test:4}` will return the *"stored content"* at position 4 of the environment in which the key `save-ans=test` was set.

6.6.2 The command `\foreachkeyans`

`\foreachkeyans`   `\foreachkeyans[`⟨*key = val*⟩`]{`⟨*store name*⟩`}`

The command `\foreachkeyans` goes through and executes the command `\getkeyans` on the contents in *prop list* `{`⟨*store name*⟩`}`. If you pass without options run `\getkeyans` on all contents in *prop list* `{`⟨*store name*⟩`}`.

Options for command

`sep` `= {`⟨*code*⟩`}`   default: *{; }*

Establishes the *separation* between *"each"* `{`⟨*content*⟩`}` stored in *prop list* `{`⟨*store name*⟩`}`. For example, you can use `sep={\\[10pt]}` for vertical separation of stored contents.

`step` `= {`⟨*integer*⟩`}`   default: *1*

Sets the *step* (increment) applied to the value set by key `start` for *"each"* `{`⟨*content*⟩`}` stored in *prop list* `{`⟨*store name*⟩`}`. The value must be a ⟨*positive integer*⟩.

`start` `= {`⟨*integer*⟩`}`   default: *1*

Sets the *position* of the *prop list* `{`⟨*store name*⟩`}` from which execution will start. The value must be a ⟨*positive integer*⟩.

`stop` `= {`⟨*integer*⟩`}`   default: *0*

Sets the *position* of the *prop list* `{`⟨*store name*⟩`}` from which execution will finish. The value must be a ⟨*positive integer*⟩.

before = {⟨*code*⟩}   default: *empty*

Sets the {⟨*code*⟩} that will be executed ⟨*before*⟩ each {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. The {⟨*code*⟩} must be passed between braces.

after = {⟨*code*⟩}   default: *empty*

Sets the {⟨*code*⟩} that will be executed ⟨*after*⟩ each {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. The {⟨*code*⟩} must be passed between braces.

wrapper = {⟨*code* {#1} *more code*⟩}   default: *empty*

Wraps the {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩} referenced by {#1}. The {⟨*code*⟩} must be passed between braces. For example `\foreachkeyans[wrapper={\makebox[1em][l]{#1}}]{`⟨*store name*⟩}`.

6.6.3   The command `\printkeyans`

`\printkeyans`
`\printkeyans{`⟨*store name*⟩}
`\printkeyans[`⟨*keys*⟩`]{`⟨*store name*⟩}
`\printkeyans*[`⟨*keys*⟩`]{`⟨*store name*⟩}

The command `\printkeyans` prints *"all stored content"* in *sequence* {⟨*store name*⟩} defined by `save-ans` key placing this inside the `enumext` or `enumext*` environment if the *starred argument* '`*`' is used.

The *"stored content"* can only be accessed *after* it is stored in the *sequence*, if {⟨*store name*⟩} does not exist the command will return an error.

The *optional argument* allows managing the ⟨*keys*⟩ in the *"first level"* of the environment in which the *"stored content"* of the *sequence* {⟨*store name*⟩} will be printed, if the *starred argument* '`*`' is used it will be `enumext*` otherwise `enumext`.

The default values for the *"first level"* are the same as the default values for the `enumext` and `enumext*` environments along with the keys `nosep,first=\small,font=\small` and `columns=2`. For the inner levels of the environment `enumext` saved in the *sequence* {⟨*store name*⟩} the default values are the same as those established for the second, third and fourth levels plus the keys `nosep,first=\small,font=\small`. If the environment `enumext*` is saved within the *sequence* {⟨*store name*⟩} it will have the same default values plus the keys `nosep,first=\small, font=\small`.

Since the command encapsulates by default the `enumext` environment or the `enumext*` environment, we must take some considerations:

- If we execute `\printkeyans*{`⟨*store name*⟩}` and the *sequence* {⟨*store name*⟩} already contains any `enumext*` environment an error will be returned as we cannot nest.

- If we execute `\printkeyans*{`⟨*store name*⟩}` and the *sequence* {⟨*store name*⟩} contains any `enumext` environments, they will start with the ⟨*keys*⟩ set for the first level unless they are set in the *optional argument* or `save-key` is used to modify it.

- If we execute `\printkeyans{`⟨*store name*⟩}` and the *sequence* {⟨*store name*⟩} contains any environment `enumext*`, they will start with the ⟨*keys*⟩ set by default unless they are set in the *optional argument* or `save-key` is used to modify it.

The default values for the *"first level"* of `\printkeyans` commands and `\printkeyans*` are established using `\setenumext[`⟨*print , 1*⟩`]{`⟨*keys*⟩}` and `\setenumext[`⟨*print\**⟩`]{`⟨*keys*⟩}`.

If we need to set the ⟨*keys*⟩ for the environment `enumext` *"saved"* in the *sequence* {⟨*store name*⟩} we will use `\setenumext[`⟨*print , level*⟩`]{`⟨*keys*⟩}` and if we need to set the ⟨*keys*⟩ for the environment `enumext*` *"saved"* in the *sequence* {⟨*store name*⟩} we will use `\setenumext[`⟨*print , \**⟩`]{`⟨*keys*⟩}`.

Example

```
\begin{enumext}[save-ans=sample,columns=1,show-pos=true,nosep,save-ref=true]
  \item Factor $3x+3y+3z$. \anskey{$3(x+y+z)$}
  \item True False

    \begin{enumext}[nosep]
      \item \LaTeX2e\ is cool? \anskey{Very True!}
    \end{enumext}

  \item Related to Linux

    \begin{enumext}[nosep]
      \item You use linux? \anskey{Yes}
      \item Rate the following package and class
        \begin{enumext}[nosep]
          \item \texttt{xsim} \anskey{very good}
          \item \texttt{exsheets} \anskey{obsolete}
        \end{enumext}
    \end{enumext}
\end{enumext}
```

```
The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
all the worksheets are as follows:

\printkeyans{sample}
```

1. Factor $3x + 3y + 3z$.

[1] | $3(x + y + z)$

2. True False

   (a) LaTeX2e is cool?

   [2] | Very True!

3. Related to Linux

   (a) You use linux?

   [3] | Yes

   (b) Rate the following package and class

      i. `xsim`

      [4] | very good

      ii. `exsheets`

      [5] | obsolete

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

1. $3(x + y + z)$ ※
2. (a) Very True! ※
3. (a) Yes ※
   (b) i. very good ※
       ii. obsolete ※

7 Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara[1] tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers 📄.

1. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:

   A 36 km/h.
   B 360 km/h.
   C 27,8 km/h.
   D $3{,}60 \times 10^8$ km/h.

2. In fisica nucleare si usa l'angstrom (simbolo: $1\,\text{Å} = 1 \times 10^{-10}$ m) e il fermi o femtometro ($1\,\text{fm} = 1 \times 10^{-15}$ m). Qual è la relazione tra queste due unità di misura?

   A $1\,\text{Å} = 1 \times 10^5$ fm.
   B $1\,\text{Å} = 1 \times 10^{-5}$ fm.
   C $1\,\text{Å} = 1 \times 10^{-15}$ fm.
   D $1\,\text{Å} = 1 \times 10^3$ fm.

3. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:

   A 36 km/h.
   B 360 km/h.
   C 27,8 km/h.
   D $3{,}60 \times 10^8$ km/h.

4. In fisica nucleare si usa l'angstrom (simbolo: $1\,\text{Å} = 1 \times 10^{-10}$ m) e il fermi o femtometro ($1\,\text{fm} = 1 \times 10^{-15}$ m). Qual è la relazione tra queste due unità di misura?

   A $1\,\text{Å} = 1 \times 10^5$ fm.
   B $1\,\text{Å} = 1 \times 10^{-5}$ fm.
   C $1\,\text{Å} = 1 \times 10^{-15}$ fm.
   D $1\,\text{Å} = 1 \times 10^3$ fm.

8 Tagged PDF examples

This section is just to show the compatibility of enumext with *tagged* PDF using `lualatex`. The attached files here are just for testing and are intended as examples and, in a way, to simplify the time of Matthew Bertucci (`@mbertucci`) when he sees this excellent package and adds it to The LaTeX Tagged PDF repository.

To compile the tests with `lualatex-dev` the packages `multicol`, `unicode-math`, `geometry`, `graphicx`, `luamml` and `hyperref` are required along with the line:

```
\DocumentMetadata{lang = en-US, pdfversion = 2.0, pdfstandard = ua-2, tagging=on,}
```

All examples have been checked using `veraPDF` together with `ngpdf`.

- The file `enumext-01.tex` contains the basic tests for the `enumext` and `enumext*` environments and the nesting between them plus the use of the `label`, `labelwidth`, `labelsep`, `ref`, `align` and `wrap-label` keys. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-02.tex` contains the tests for the `enumext` and `enumext*` environments and the support for `minipage` and `multicols` environments using the keys `columns`, `columns-sep`, `mini-env`, `mini-right` and `\miniright` command. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-03.tex` contains the tests for the `enumext` and `keyanspic` environments activated by the `save-ans` key together with the `save-sep` and `save-ref` keys and the `\printkeyans` command. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-04.tex` contains the tests for the `\anskey` command and the `anskey*` environment activated by the `save-ans` key along with the `\getkeyans` and `\printkeyans` commands. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-05.tex` contains the tests for the environments `keyans`, `keyans*` and `keyanspic` activated by the key `save-ans` together with the keys `no-store` and `show-ans` and the commands `\setenumext`, `\setenumextmeta`, `\printkeyans` and `\foreachkeyans`. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-06.tex` contains the tests for the environments `enumext` and `enumext*` for *fake* `itemize` and `description`. Source file 📄 and *tagged* PDF 📄.
- The file `enumext-07.tex` contains the tests for starting the environments with `\setenumext{resume}`, the `\resetenumext` command and the `series`, `resume`, `resume*` and `reset` keys. Source file 📄 and *tagged* PDF 📄.

9 The way of non-enumerated lists

It is possible to use (or abuse) the `enumext` and `enumext*` environments to mimic *non-enumerated* list environments such as `itemize` and `description`, clearly the ⟨*keys*⟩ to *"store answers"*, the `keyans`, `keyans*` and `keyanspic` environments lose their sense and it is not the focus of enumext package, but, why not to do it?.

Here I leave as an example other uses of the `enumext` environment that can be helpful for specific purposes. The *trick* to generate these *"fake environments"* is set `label={}` or `label={⟨some⟩}` and play with the `list-indent`, `list-offset`, `font` and `wrap-label` keys.

Fake `itemize` environment

Here we set the `label` key using the default settings in LaTeX for the four levels `\textbullet`, `\textendash`, `\textasteriskcentered` and `\textperiodcentered` together with the `nosep` key to reduce the vertical spaces in the left side example and set the `label` key in *mathematical mode* for the right side as `\ast`, `\diamond`, `\circ` and `\star` for the four levels together with the `nosep` key

- First level item
  - Second level item
    * Third level item
      · Fourth level item
- First level item

∗ First level item
  ⋄ Second level item
    ∘ Third level item
      ⋆ Fourth level item
∗ First level item

Fake `description` environment

Here we set `label={}` and `list-indent=2.5em,font=\bfseries`.

SomeThing A short one-line description.
 This is an entry *without* a label.
Something A short *one-line* description text.
Something long A much *longer* description text may take more than one line or more than one paragraph.
Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add `list-indent=0pt` you get *widest style*:

SomeThing A short one-line description.
 This is an entry *without* a label.
Something A short *one-line* description text.
Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

🖉 The small space at the beginning of the *"unlabeled entry"* corresponds to `\labelsep` and can be removed using `\hspace{-\labelsep}` at the beginning of the line.

🖉 When *tagged* PDF is active the default `description` style is NOT available due to the redefinition of `\makelabel` for the `align` key which uses `\makebox` in this case, meaning that `\item[⟨content⟩]` will not extend beyond `\labelwidth` which causes overlaps,

Description indented by label

Here we set `label={}` and we will give a convenient value to `labelsep` and `labelwidth`, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use `labelsep=4pt,labelwidth=\descitemwd,font=\bfseries`.

SomeThing   A short one-line description.
                       This is an entry *without* a label.
Something   A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the ⟨*labels*⟩ are on the left margin calculating the value passed to the `list-offset` key, in this case it will be equal to the sum of the values set by the `labelwidth` and `labelsep` keys finally resulting as `list-offset={-\descitemwd - 4pt}`.

SomeThing   A short one-line description.
                 This is an entry *without* a label.
Something   A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add `align=right` it will look like this:

SomeThing A short one-line description.
This is an entry *without* a label.
Something A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

🖉 At this point we have used `list-offset={-\descitemwd - 4pt}` instead of `list-offset={-\labelwidth - \labelsep}`, this is because the parameters `\labelwidth` and `\labelsep` take the default values, as if we had not set `label`.

Description with multi-line labels

The `label` key does not accept *multiline material*, this is where the `wrap-label` and `wrap-label*` keys comes into play. Unlike the `enumitem` package, the `align` key only supports three options, so what we will do is create a command in the style `\parleft` of `enumitem` that allows us to place *multiline labels* using `\parbox`.

```
\NewDocumentCommand \labelbx { s +m }
  {%
    \SuspendTagging{\parbox}%
    \IfBooleanTF{#1}
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
    \ResumeTagging{\parbox}%
  }
```

Now we just need to set `wrap-label*={\labelbx{#1}}`.

SomeThing A short one-line description.
This is an entry *without* a label.
Something A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.
Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

SoMeThInG LoNg A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[5] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the l3prop[11] and l3seq[11] modules together with the hyperref[8] and enumitem[6] packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called *"reinventing the wheel"*, since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This *"reinventing the wheel"* finally ended up becoming enumext.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.
Of course, seeing the final result of the experiment *"reinventing the wheel"* I am quite satisfied.

Why not random questions and other utilities

The *"random"* type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typesetting a document with LaTeX, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

Why has it taken so long?

One of the setbacks, beyond my laziness, was including compatibility with *tagged* PDF. To be honest, it's something I never considered at any point, but I firmly believe that being able to create *accessible documents* provides a great opportunity in the world of mathematics education. From my perspective as a *high school* teacher, beyond theorems and deep mathematics, the use of exercise lists is one of the most common things. Being able to open the way to work in parallel with those who have different abilities is really important and I regret not having looked into this in the past. I hope that enumext serves this purpose and inspires more users and authors to follow this path.

11   Change history

v1.6 (ctan), 2025-07-04	– Syntax simplification for `\setenumextmeta`.
	– Environments can be started with the key `resume` *without value*.
	– Add `\resetenumext`, `reset` and `reset*` keys.
	– The `resume`, `resume*` and `series` keys can now be set per level.
	– Fixed bad interaction between `\printkeyans` and the `resume`, `resume*` keys.
v1.5 (ctan), 2025-06-11	– Replacing `\regex_match:` (deprecated) with `\regex_if_match:`.
	– Add keys `beginpenalty`, `midpenalty` and `endpenalty`.
v1.4 (ctan), 2025-06-09	– Improved implementation of the `start` key for *tagged* PDF.
	– Improved implementation of the `ref` key.
	– Fixed the behavior of the `save-sep` key.
	– Fixed the behavior of the `resume*` key.
v1.3 (ctan), 2025-06-01	– Removed dependency on the `scontents` package.
	– The `anskey*` environment has been rewritten using the new `c-type` argument.
v1.2 (ctan), 2025-03-28	– Replace signature (prevent expansion for optional argument).
	– Solve Inconsistent local/global assignment.
v1.1 (ctan), 2024-11-14	– Fixed implementation for `font` and `base-fix` keys.
	– Added new keys for symbol marks.
	– Update and improvements in the internal code.
	– Adjustments in the documentation.
v1.0 (ctan), 2024-11-01	– First public release.

12 Index of Documentation

The italic numbers denote the pages where the corresponding entry is described.

13 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: ○ https://github.com/pablgonz/enumext/issues.

💣 The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TEXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

13.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext* environment and variables containing viii are associated with the keyans* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function __enumext_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

13.2 Initial set up

Start the DocStrip guards.

```
1 ⟨*package⟩
```

Identify the internal prefix (LaTeX3 DocStrip convention) for l3doc class.

```
2 ⟨@@=enumext⟩
```

13.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of LaTeX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e}[2025-06-01]
```

Now declare the enumext package.

```
4 \ProvidesExplPackage {enumext} {2025-07-04} {1.6} {Enumerate exercise sheets}
```

Finally check if the multicol package are loaded, if not we load it.

```
5 \hook_gput_code:nnn {begindocument} {enumext}
6   {
7     \IfPackageLoadedTF { multicol }
8       {
9         \msg_info:nnn { enumext } { package-load } { multicol }
10      }
11      {
12        \msg_info:nnn { enumext } { package-not-load } { multicol }
13        \RequirePackage{multicol}[2025-05-25]
14      }
15  }
```

13.4 Definition of variables

Variables that do not appear in this section are created by means of \keys_define:nn or some function described below.

\l__enumext_level_int
\l__enumext_level_h_int
\l__enumext_anskey_level_int
\l__enumext_keyans_level_int
\l__enumext_keyans_level_h_int
\l__enumext_keyans_pic_level_int

Integer variables will control the nesting levels of the environments, anskey* environment and \anskey command.

```
16 \int_new:N  \l__enumext_level_int
17 \int_new:N  \l__enumext_level_h_int
18 \int_new:N  \l__enumext_anskey_level_int
19 \int_new:N  \l__enumext_keyans_level_int
20 \int_new:N  \l__enumext_keyans_level_h_int
21 \int_new:N  \l__enumext_keyans_pic_level_int
```

(*End of definition for* \l__enumext_level_int *and others.*)

`\l__enumext_starred_bool`
`\g__enumext_starred_bool`
`\l__enumext_starred_first_bool`
`\l__enumext_standar_bool`
`\g__enumext_standar_bool`
`\l__enumext_standar_first_bool`
`\l__enumext_keyans_env_bool`
`\g__enumext_start_line_tl`
`\g__enumext_envir_name_tl`
`\l__enumext_envir_name_tl`

Internal variables used by functions `\__enumext_is_not_nested:`, `\__enumext_is_on_first_level:` and `\__enumext_keyans_name_and_start:` (§13.5.1).

```
22 \bool_new:N \l__enumext_starred_bool
23 \bool_new:N \g__enumext_starred_bool
24 \bool_new:N \l__enumext_starred_first_bool
25 \bool_new:N \l__enumext_standar_bool
26 \bool_new:N \g__enumext_standar_bool
27 \bool_new:N \l__enumext_standar_first_bool
28 \bool_new:N \l__enumext_keyans_env_bool
29 \tl_new:N   \g__enumext_start_line_tl
30 \tl_new:N   \g__enumext_envir_name_tl
31 \tl_new:N   \l__enumext_envir_name_tl
```

(*End of definition for* `\l__enumext_starred_bool` *and others.*)

`\l__enumext_counter_i_tl`
`\l__enumext_counter_ii_tl`
`\l__enumext_counter_iii_tl`
`\l__enumext_counter_iv_tl`
`\l__enumext_counter_v_tl`
`\l__enumext_counter_vi_tl`
`\l__enumext_counter_vii_tl`
`\l__enumext_counter_viii_tl`

Variables to store the *"name of the counters"* enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment and enumXvi for the keyanspic environment. The counters enumXvii and enumXviii are used by enumext* and keyans* environments.

The initial values of these variables are set by the function `\__enumext_define_counter:Nn` (§13.11) and then modified by the function `\__enumext_label_style:Nnn` used by label key (§13.14).

```
32 \cs_set_protected:Npn \__enumext_tmp:n #1
33   {
34     \tl_new:c { l__enumext_counter_#1_tl }
35   }
36 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `\l__enumext_counter_i_tl` *and others.*)

`\l__enumext_ref_key_arg_tl`
`\l__enumext_ref_the_count_tl`
`\l__enumext_renew_counter_X_tl`
`\l__enumext_the_counter_X_tl`

Internal variables used by ref key (§13.14).

```
37 \tl_new:N \l__enumext_ref_key_arg_tl
38 \tl_new:N \l__enumext_ref_the_count_tl
39 \cs_set_protected:Npn \__enumext_tmp:n #1
40   {
41     \tl_new:c  { l__enumext_renew_counter_#1_tl }
42     \tl_new:c  { l__enumext_the_counter_#1_tl   }
43     \tl_set:ce { l__enumext_the_counter_#1_tl   } { \exp_not:c { theenumX#1 } }
44   }
45 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `\l__enumext_ref_key_arg_tl` *and others.*)

`\l__enumext_series_name_tl`
`\l__enumext_resume_count_bool`
`\l__enumext_resume_series_X_bool`
`\g__enumext_save_last_keys_X_tl`

Internal variables used by resume, resume* and series keys (§13.26).

```
46 \tl_new:N \l__enumext_series_name_tl
47 \bool_new:N \l__enumext_resume_count_bool
48 \cs_set_protected:Npn \__enumext_tmp:n #1
49   {
50     \bool_new:c { l__enumext_resume_series_#1_bool }
51     \tl_new:c   { g__enumext_save_last_keys_#1_tl  }
52   }
53 \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `\l__enumext_series_name_tl` *and others.*)

`\l__enumext_current_widest_dim`
`\g__enumext_counter_styles_tl`
`\g__enumext_widest_label_tl`
`\l__enumext_label_width_by_box`

The variable `\l__enumext_current_widest_dim` stores the current label width, the variable `\g__enumext_counter_styles_tl` stores the default ⟨*label style*⟩ and the variable `\g__enumext_widest_label_tl` the label width. These variables are used by widest (§13.15) and label (§13.13) keys.

```
54 \dim_new:N \l__enumext_current_widest_dim
55 \tl_new:N  \g__enumext_counter_styles_tl
56 \tl_new:N  \g__enumext_widest_label_tl
57 \box_new:N \l__enumext_label_width_by_box
```

(*End of definition for* `\l__enumext_current_widest_dim` *and others.*)

`\l__enumext_leftmargin_tmp_X_bool`
`\l__enumext_leftmargin_tmp_X_dim`
`\l__enumext_leftmargin_X_dim`
`\l__enumext_itemindent_X_dim`

The boolean variable `\l__enumext_leftmargin_tmp_X_bool` and the dimensional variable `\l__enumext_leftmargin_tmp_X_dim` are used by the list-indent key (§13.19). The variables `\l__enumext_leftmargin_X_dim` and `\l__enumext_itemindent_X_dim` are used and set by the function `\__enumext_calc_hspace:NNNNNNNNNNNN` (§13.41.1).

```
58 \cs_set_protected:Npn \__enumext_tmp:n #1
59   {
60     \bool_new:c { l__enumext_leftmargin_tmp_#1_bool }
```

```
61          \dim_new:c  { l__enumext_leftmargin_tmp_#1_dim  }
62          \dim_new:c  { l__enumext_leftmargin_#1_dim      }
63          \dim_new:c  { l__enumext_itemindent_#1_dim      }
64        }
65      \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \l__enumext_leftmargin_tmp_X_bool *and others.*)

\l__enumext_multicols_above_X_skip
\l__enumext_multicols_below_X_skip
\g__enumext_multicols_right_X_skip
\l__enumext_align_label_pos_X_str

Internal variables used by columns key (§13.23) and align key (§13.13).

```
66      \cs_set_protected:Npn \__enumext_tmp:n #1
67        {
68          \skip_new:c  { l__enumext_multicols_above_#1_skip }
69          \skip_new:c  { l__enumext_multicols_below_#1_skip }
70          \skip_new:c  { g__enumext_multicols_right_#1_skip }
71          \str_new:c   { l__enumext_align_label_pos_#1_str  }
72        }
73      \clist_map_inline:nn { i, ii, iii, iv, v } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \l__enumext_multicols_above_X_skip *and others.*)

\g__enumext_minipage_stat_int
\l__enumext_minipage_temp_skip
\l__enumext_minipage_left_skip
\l__enumext_minipage_right_skip
\l__enumext_minipage_after_skip
\g__enumext_minipage_right_skip
\g__enumext_minipage_after_skip
\l__enumext_minipage_left_X_dim
\l__enumext_minipage_active_X_bool

Internal variables used by \miniright command (§13.24.4) and the keys mini-right, mini-right*, mini-env and mini-sep (§13.22, §13.24).

```
74      \int_new:N  \g__enumext_minipage_stat_int
75      \skip_new:N \l__enumext_minipage_temp_skip
76      \skip_new:N \l__enumext_minipage_left_skip
77      \skip_new:N \l__enumext_minipage_right_skip
78      \skip_new:N \l__enumext_minipage_after_skip
79      \skip_new:N \g__enumext_minipage_right_skip
80      \skip_new:N \g__enumext_minipage_after_skip
81      \cs_set_protected:Npn \__enumext_tmp:n #1
82        {
83          \dim_new:c  { l__enumext_minipage_left_#1_dim    }
84          \bool_new:c { l__enumext_minipage_active_#1_bool }
85        }
86      \clist_map_inline:nn { i, ii, iii, iv, v, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \g__enumext_minipage_stat_int *and others.*)

\l__enumext_wrap_label_X_bool
\l__enumext_wrap_label_opt_X_bool
\l__enumext_start_X_int
\l__enumext_fake_item_indent_X_tl
\l__enumext_label_fill_left_X_tl
\l__enumext_label_fill_right_X_tl
\l__enumext_vspace_a_star_X_bool
\l__enumext_vspace_b_star_X_bool

The bool vars \l__enumext_wrap_label_X_bool and \l__enumext_wrap_label_opt_X_bool are used by wrap-label and wrap-label* keys (§13.13), the integer \l__enumext_start_X_int are used by the start and start* keys (§13.15), the token list \l__enumext_fake_item_indent_X_tl is used by itemindent key (§13.19.1), the variables \l__enumext_label_fill_left_X_tl and \l__enumext_-label_fill_left_X_tl are used by the align key (§13.13). The boolean vars \l__enumext_vspace_-a_star_X_bool, \l__enumext_vspace_b_star_X_bool are used by above, above*, below and below* keys (§13.21).

```
87      \cs_set_protected:Npn \__enumext_tmp:n #1
88        {
89          \bool_new:c { l__enumext_wrap_label_#1_bool     }
90          \bool_new:c { l__enumext_wrap_label_opt_#1_bool }
91          \int_new:c  { l__enumext_start_#1_int           }
92          \tl_new:c   { l__enumext_fake_item_indent_#1_tl }
93          \tl_new:c   { l__enumext_label_fill_left_#1_tl  }
94          \tl_new:c   { l__enumext_label_fill_right_#1_tl }
95          \bool_new:c { l__enumext_vspace_a_star_#1_bool  }
96          \bool_new:c { l__enumext_vspace_b_star_#1_bool  }
97        }
98      \clist_map_inline:nn { i, ii, iii, iv, v, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* \l__enumext_wrap_label_X_bool *and others.*)

\l__enumext_store_active_bool
\l__enumext_store_name_tl
\g__enumext_store_name_tl
\l__enumext_store_current_label_tl
\l__enumext_store_current_opt_arg_tl

The variable \l__enumext_store_active_bool setting by save-ans key (§13.29.1) activates all the mechanism related to \anskey, anskey*, keyans, keyans* and keyanspic environments.

The variable \l__enumext_store_name_tl saves the {⟨*store name*⟩} set by the save-ans key of the *sequence* and *prop list* in which we will store, the variable \g__enumext_store_name_tl it's just a global copy of {⟨*store name*⟩} used by different functions.

The variables \l__enumext_store_current_label_tl and \l__enumext_store_current_opt_arg_-tl save the *current label* and *optional argument* of \item* (§13.40) and \anspic* (§13.45.2) for the keyans, keyans* and keyanspic environments.

```
99      \bool_new:N \l__enumext_store_active_bool
100     \tl_new:N   \l__enumext_store_name_tl
```

```
101 \tl_new:N   \g__enumext_store_name_tl
102 \tl_new:N   \l__enumext_store_current_label_tl
103 \tl_new:N   \l__enumext_store_current_opt_arg_tl
```

(*End of definition for* \l__enumext_store_active_bool *and others.*)

\l__enumext_store_anskey_arg_tl
\l__enumext_store_anskey_env_tl
\l__enumext_write_anskey_env_bool
\l__enumext_write_anskey_env_file_name_tl
\l__enumext_write_anskey_env_file_iow

The variable \l__enumext_store_anskey_arg_tl *save the* *argument of* \anskey (§13.33) *and the variables*
\l__enumext_store_anskey_env_tl *save the* ⟨*body*⟩ *of the environment* anskey* (§13.34).

The variables \l__enumext_write_anskey_env_bool, \l__enumext_write_anskey_env_file_name_-
tl *and* \l__enumext_write_anskey_env_file_iow *they are used by the* write-env *and* overwrite *keys*
in the anskey* *environment implementation.*

```
104 \tl_new:N   \l__enumext_store_anskey_arg_tl
105 \tl_new:N   \l__enumext_store_anskey_env_tl
106 \bool_new:N \l__enumext_write_anskey_env_bool
107 \tl_new:N   \l__enumext_write_anskey_env_file_name_tl
108 \iow_new:N  \l__enumext_write_anskey_env_file_iow
```

(*End of definition for* \l__enumext_store_anskey_arg_tl *and others.*)

\c__enumext_anskey_env_hidden_space_str

The \c__enumext_anskey_env_hidden_space_str *is a constant* *string* *to used to hide the* ⟨*forced space*⟩
added by TeX *when recording content in a macro. This* *string* *contains the* *reserved phrase* "%^^Aenumextheol%"
which is added to the end of the argument stored in *sequence* *and* *prop list* *when the key* force-eol *is false.*

```
109 \str_const:Ne \c__enumext_anskey_env_hidden_space_str
110   { \c_percent_str \c_circumflex_str \c_circumflex_str A enumextheol \c_percent_str }
```

(*End of definition for* \c__enumext_anskey_env_hidden_space_str.)

(End of definition for `\l__enumext_item_starred_X_bool` *and others.)*

`\c__enumext_all_envs_clist` An internal `clist`-var variable to run with `\__enumext_tmp:n`.

```
194  \clist_const:Nn \c__enumext_all_envs_clist
195    {
196      {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv},
197      {keyans}{v}, {enumext*}{vii}, {keyans*}{viii}
198    }
```

(End of definition for `\c__enumext_all_envs_clist`.*)*

13.5 Some utility functions

`\keys_precompile:neN` Non-standard kernel variants used by the `\printkeyans` command (§13.50) and `\foreachkeyans` command
`\seq_use:NV` (§13.53).

```
199  \cs_generate_variant:Nn \keys_precompile:nnN { neN }
200  \cs_generate_variant:Nn \seq_use:Nn { NV }
```

(End of definition for `\keys_precompile:neN` *and* `\seq_use:NV`.*)*

`\__enumext_scan_tokens:n` The functions `\tl_rescan:nn` and `\tl_set_rescan:Nnn` provided by expl3 doesn't fit the needs of this package because it does not allow catcode changes inside the argument, so verbatim stuff used inside one of `anskey*` environment will not work. Here we create a private copy of `\tex_scantokens:D` which will serve our purposes. See the answer by Ulrich Diez in How do use {<setup>} in \tl_set_rescan:Nnn to replace \scantokens?.

```
201  \cs_new_protected:Npn \__enumext_scan_tokens:n #1 { \tex_scantokens:D {#1} }
```

(End of definition for `\__enumext_scan_tokens:n`.*)*

`\__enumext_at_begin_document:n` A internal *"hook"* function used for copying plain `list` and `minipage` environments definition and `hyperref` detection.

```
202  \cs_new_protected:Npn \__enumext_at_begin_document:n #1
203    {
204      \hook_gput_code:nnn {begindocument} {enumext} { #1 }
205    }
```

(End of definition for `\__enumext_at_begin_document:n`.*)*

`\__enumext_after_env:nn` A internal *"hook"* functions for execute code `mini-right` and `mini-right*` keys outside the `enumext*` and
`\__enumext_before_env:nn` `keyans*` environments and print `check-ans` outside the `enumext` and `enumext*` environments.

```
206  \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
207    {
208      \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
209    }
210  \cs_new_protected:Npn \__enumext_before_env:nn #1 #2
211    {
212      \hook_gput_code:nnn {env/#1/before} {enumext} {#2}
213    }
```

(End of definition for `\__enumext_after_env:nn` *and* `\__enumext_before_env:nn`.*)*

`\__enumext_level:` Function for check current level in `enumext`.

```
214  \cs_new:Nn \__enumext_level:
215    {
216      \int_to_roman:n { \l__enumext_level_int }
217    }
```

(End of definition for __enumext_level:.)

__enumext_if_is_int:nT
__enumext_if_is_int:nF
__enumext_if_is_int:nTF

A conditional function to know if the variable we are passing is an integer used by start and widest keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

```
218  \prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
219    {
220      \regex_if_match:nnTF { ^[\+\-]?[\d]+$ } {#1} % $
221        { \prg_return_true: }
222        { \prg_return_false: }
223    }
```

(End of definition for __enumext_if_is_int:nT, __enumext_if_is_int:nF, and __enumext_if_is_int:nTF.)

__enumext_show_length:nnn

Internal function used by show-length key to show *"all lengths"* calculated and use in enumext, enumext*, keyans and keyans* environments.

```
224  \cs_new:Npn \__enumext_show_length:nnn #1 #2 #3
225    {
226      *~#2
227      \prg_replicate:nn { 14 - \str_count:n {#2} } {~}
228        =~\use:c { #1_use:c } { l__enumext_#2_#3_#1 } \\
229    }
```

(End of definition for __enumext_show_length:nnn.)

__enumext_unskip_unkern:

The function __enumext_unskip_unkern: will remove the last ⟨*skip*⟩ or ⟨*kern*⟩ at execution time using the values 11 and 12 of \lastnodetype to apply \unskip or \unkern according to the case.

```
230  \cs_new_protected:Nn \__enumext_unskip_unkern:
231    {
232      \int_case:nnT { \lastnodetype }
233        {
234          { 11 }{ \unskip }
235          { 12 }{ \unkern }
236        }
237    }
```

(End of definition for __enumext_unskip_unkern:.)

13.5.1 Utilities for environments and levels

__enumext_is_not_nested:
__enumext_is_on_first_level:

The function __enumext_is_not_nested: set the variables \g__enumext_standar_bool and \g__enumext_starred_bool to *"true"* only if the environments enumext and enumext* are NOT nested in each other and save the environment name in \l__enumext_envir_name_tl.

```
238  \cs_new_protected:Nn \__enumext_is_not_nested:
239    {
240      \str_case:en { \@currenvir }
241        {
242          {enumext}
243            {
244              \tl_set:Nn \l__enumext_envir_name_tl { enumext }
245              \bool_lazy_and:nnT
246                { \bool_not_p:n { \g__enumext_standar_bool } }
247                { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
248                {
249                  \bool_gset_true:N \g__enumext_standar_bool
250                }
251            }
252          {enumext*}
253            {
254              \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
255              \bool_lazy_and:nnT
256                { \bool_not_p:n { \g__enumext_starred_bool } }
257                { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
258                {
259                  \bool_gset_true:N \g__enumext_starred_bool
260                }
261            }
262        }
263    }
```

The function __enumext_is_on_first_level: will set the variables \l__enumext_standar_first_-
bool (§13.29.1), \l__enumext_starred_first_bool (§13.29.1) to *"true"* only if the environment is not
nested and we are in the *"first level"* of it . We will also save the *start line number* of each environment in the
variable \g__enumext_start_line_tl and the *name* of each environment in the variable \g__enumext_-
envir_name_tl to use in messages related to the check-ans key and .log file.

```
264  \cs_new_protected:Nn \__enumext_is_on_first_level:
265    {
266      \bool_lazy_all:nT
267        {

345       \tl_gclear:N \g__enumext_store_name_tl
346       \tl_gclear:N \g__enumext_start_line_tl
347       \tl_gclear:N \g__enumext_envir_name_tl
348    }
```

(*End of definition for* __enumext_reset_global_vars: *and others.*)

__enumext_log_global_vars:
__enumext_log_answer_vars:

The function __enumext_log_global_vars: will be passed to the function __enumext_execute_-
after_env: and write to the .log file the number of elements saved in the *prop list* and *sequence* created by
the save-ans key along with the value of the integer variable created for the resume key.

```
349  \cs_new_protected:Nn \__enumext_log_global_vars:
350    {
351       \msg_log:nneeee { enumext } { prop-seq-int-hook }
352         { \g__enumext_store_name_tl }
353         { \prop_count:c { g__enumext_ \g__enumext_store_name_tl _prop } }
354         { \seq_count:c { g__enumext_ \g__enumext_store_name_tl _seq } }
355         { \int_use:c { g__enumext_resume_ \g__enumext_store_name_tl _int } }
356    }
```

The function __enumext_log_answer_vars: will be passed to the function __enumext_execute_-
after_env: and write to the .log file the number of items and answers along with the difference between
them.

```
357  \cs_new_protected:Nn \__enumext_log_answer_vars:
358    {
359       \msg_log:nneee { enumext } { item-answer-hook }
360         { \int_use:N \g__enumext_item_number_int }
361         { \int_use:N \g__enumext_item_anskey_int }
362         { \int_eval:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int} }
363    }
```

(*End of definition for* __enumext_log_global_vars: *and* __enumext_log_answer_vars:.)

13.6 Copying list and minipage environments

The list environment provided by LaTeX has the following plain form:

```
\list{⟨arg one⟩}{⟨arg two⟩}
   \item[⟨opt⟩]
\endlist
```

And minipage environment provided by LaTeX has the following (simplified) plain form:

```
\minipage[⟨pos⟩][⟨height⟩][⟨inner-pos⟩]{⟨width⟩}
   ⟨internal implement⟩
\endminipage
```

As a precaution we copy them using `\__enumext_at_begin_document:n` in case any package redefines the `list` environment or a related command.

🔷 For compatibility with *tagged* PDF we should use `\NewCommandCopy` and not `\cs_new_eq:NN` for `\item`. When *tagged* PDF is active `\item` is redefined using `ltcmd` (see `latex-lab-block`[19]).

`\__enumext_start_list:nn`
`\__enumext_stop_list:`
`\__enumext_item_std:w`
`\__enumext_minipage:w`
`\__enumext_endminipage:`

The functions `\__enumext_start_list:nn` and `\__enumext_stop_list:` correspond to copies of `\list` and `\endlist` from plain definition of `list` environment, the function `\__enumext_item_std:w` is a copy of the `\item` command.

```
364 \__enumext_at_begin_document:n
365   {
366     \cs_new_eq:NN   \__enumext_start_list:nn \list
367     \cs_new_eq:NN   \__enumext_stop_list: \endlist
368     \NewCommandCopy \__enumext_item_std:w \item
369   }
```

The functions `\__enumext_minipage:w` and `\__enumext_endminipage:` correspond to copies of `\minipage` and `\endminipage` from plain definition of `minipage` environment.

```
370 \__enumext_at_begin_document:n
371   {
372     \cs_new_eq:NN \__enumext_minipage:w \minipage
373     \cs_new_eq:NN \__enumext_endminipage: \endminipage
374   }
```

(*End of definition for* `\__enumext_start_list:nn` *and others.*)

13.7 Compatibility with hyperref and footnotehyper

`\__enumext_after_hyperref:`
`\__enumext_hypertarget:nn`
`\__enumext_phantomsection:`

First we define the necessary rules using *"hooks"* to determine if the `hyperref` package is loaded.

```
375 \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
376 \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

The function `\__enumext_after_hyperref:` sets the state of the boolean variable `\l__enumext_-hyperref_bool` to "true" if the package is loaded. At this point we will use the public macro `\IfHyperBoolean` to determine if the `hyperfootnotes=true` key is present, if so, we set the state of the boolean variable `\l__enumext_footnotes_key_bool` to "true".

```
377 \cs_new_protected:Nn \__enumext_after_hyperref:
378   {
379     \IfPackageLoadedT { hyperref }
380       {
381         \msg_info:nnn { enumext } { package-load } { hyperref }
382         \bool_set_true:N \l__enumext_hyperref_bool
383         \IfHyperBoolean{hyperfootnotes}
384           {
385             \bool_set_true:N \l__enumext_footnotes_key_bool
386           }
387           {  }
388       }
```

If the state of the variable `\l__enumext_footnotes_key_bool` is true we will check if the package `footnotehyper` is loaded, in case it is not present, we will set the value of `\l__enumext_footnotes_-key_bool` to false and we will redefine `\footnote`.

```
389     \bool_if:NT \l__enumext_footnotes_key_bool
390       {
391         \IfPackageLoadedTF { footnotehyper }
392           {
393             \msg_info:nnn { enumext } { package-load } { footnotehyper }
394           }
395           {
396             \bool_set_false:N \l__enumext_footnotes_key_bool
397           }
398       }
```

The functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` correspond to the internal copies of `\hypertarget` and `\phantomsection`. If the boolean variable `\l__enumext_hyperref_bool` is false the functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` will be disabled.

```
399     \bool_if:NTF \l__enumext_hyperref_bool
400       {
401         \cs_new_eq:NN \__enumext_hypertarget:nn \hypertarget
402         \cs_new_eq:NN \__enumext_phantomsection: \phantomsection
403       }
404       {
405         \cs_new_eq:NN \__enumext_hypertarget:nn \use_none:nn
```

```
406            \cs_new_eq:NN \__enumext_phantomsection: \prg_do_nothing:
407        }
408    }
```

(*End of definition for* `\__enumext_after_hyperref:`, `\__enumext_hypertarget:nn`, *and* `\__enumext_phantomsection:`.)

`\__enumext_newlabel:nn`   The function `\__enumext_newlabel:nn` write the information to the `.aux` file when using the `save-ref` key. The arguments taken by the function are:

#1 :   `\l__enumext_newlabel_arg_one_tl`
#2 :   `\l__enumext_newlabel_arg_two_tl`

💣 The trick here is to manage the number of arguments passed to `\newlabel{#1}{#2}` according to the presence of the `hyperref` package.

```
409  \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
410    {
411        \protected@write \@auxout { }
412          {
413            \token_to_str:N \newlabel {#1}
414              {
415                {#2}
416                \bool_if:NT \l__enumext_hyperref_bool
417                  { { \thepage } {#2} {#1} }
418                { }
419              }
420          }
421        \__enumext_hypertarget:nn {#1} { }
422        \__enumext_phantomsection:
423    }
```

(*End of definition for* `\__enumext_newlabel:nn`.)

13.8   Internal redefining `\footnote` command

To keep the correct numbering of `\footnote` and to make it work correctly in the `enumext*` and `keyans*` environments and `mini-env` key it is necessary to redefine the `\footnote` command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in footnotes in boxes compatible with hyperref.

`\__enumext_footnotetext:nn`
`\__enumext_renew_footnote:`
`\__enumext_print_footnote:`
`\__enumext_renew_footnote_mini:`
`\__enumext_print_footnote_mini:`

Redefinition of the `\footnote` command using `\footnotetext` and `\footnotemark` for the `mini-env` key in the `enumext` and `keyans` environments.

```
424  \cs_new_protected:Nn \__enumext_footnotetext:nn
425    {
426        \footnotetext[#1]{#2}
427    }
428  \cs_new_protected:Nn \__enumext_renew_footnote:
429    {
430        \RenewDocumentCommand \footnote { o +m }
431          {
432            \tl_if_novalue:nTF {##1}
433              {
434                \stepcounter{footnote}
435                \int_gset_eq:Nc \g__enumext_footnote_standar_int { c@footnote }
436              }
437              {
438                \int_gset:Nn \g__enumext_footnote_standar_int { ##1 }
439              }
440            \footnotemark [ \g__enumext_footnote_standar_int ]
441            \seq_gput_right:Nn \g__enumext_footnote_standar_arg_seq { ##2 }
442            \seq_gput_right:NV
443              \g__enumext_footnote_standar_int_seq \g__enumext_footnote_standar_int
444          }
445    }
446  \cs_new_protected:Nn \__enumext_print_footnote:
447    {
448        \seq_if_empty:NF \g__enumext_footnote_standar_int_seq
449          {
450            \seq_map_pairwise_function:NNN
451              \g__enumext_footnote_standar_int_seq
452              \g__enumext_footnote_standar_arg_seq
453              \__enumext_footnotetext:nn
454          }
455        \seq_gclear:N \g__enumext_footnote_standar_arg_seq
456        \seq_gclear:N \g__enumext_footnote_standar_int_seq
457    }
```

The `enumext*` and `keyans*` environments are implemented using `minipage` so we must also redefine `\footnote` to keep these numbering as if it were part of the document.

```
458  \cs_new_protected:Nn \__enumext_renew_footnote_mini:
459    {
460      \RenewDocumentCommand \footnote { o +m }
461        {
462          \tl_if_novalue:nTF {##1}
463            {
464              \stepcounter{footnote}
465              \int_gset_eq:Nc \g__enumext_footnote_starred_int { c@footnote }
466            }
467            {
468              \int_gset:Nn \g__enumext_footnote_starred_int { ##1 }
469            }
470          \footnotemark [ \g__enumext_footnote_starred_int ]
471          \seq_gput_right:Nn \g__enumext_footnote_starred_arg_seq { ##2 }
472          \seq_gput_right:NV
473            \g__enumext_footnote_starred_int_seq \g__enumext_footnote_starred_int
474        }
475    }
476  \cs_new_protected:Nn \__enumext_print_footnote_mini:
477    {
478      \seq_if_empty:NF \g__enumext_footnote_starred_int_seq
479        {
480          \seq_map_pairwise_function:NNN
481            \g__enumext_footnote_starred_int_seq
482            \g__enumext_footnote_starred_arg_seq
483            \__enumext_footnotetext:nn
484        }
485      \seq_gclear:N \g__enumext_footnote_starred_arg_seq
486      \seq_gclear:N \g__enumext_footnote_starred_int_seq
487    }
```

(End of definition for `\__enumext_footnotetext:nn` *and others.)*

`\__enumext_renew_footnote_standar:`
`\__enumext_print_footnote_standar:`
`\__enumext_renew_footnote_starred:`
`\__enumext_print_footnote_starred:`

We encapsulate the redefinition of `\footnote` to pass it to internal `__enumext_mini_page` environment used by the `mini-env` key in the `enumext` and `keyans` environments. We will run the redefinition when *tagged* PDF is active or when the `footnotehyper` package is not loaded.

```
488  \cs_new_protected:Nn \__enumext_renew_footnote_standar:
489    {
490      \bool_if:NT \g__enumext_standar_bool
491        {
492          \IfDocumentMetadataTF
493            {
494              \__enumext_renew_footnote:
495            }
496            {
497              \bool_if:NF \l__enumext_footnotes_key_bool
498                {
499                  \__enumext_renew_footnote:
500                }
501            }
502        }
503    }
504  \cs_new_protected:Nn \__enumext_print_footnote_standar:
505    {
506      \bool_if:NT \g__enumext_standar_bool
507        {
508          \IfDocumentMetadataTF
509            {
510              \__enumext_print_footnote:
511            }
512            {
513              \bool_if:NF \l__enumext_footnotes_key_bool
514                {
515                  \__enumext_print_footnote:
516                }
517            }
518        }
519    }
```

We encapsulate the redefinition of \footnote to pass it to the enumext* and keyans* environments. We will run the redefinition when *tagged* PDF is active or when the footnotehyper package is not loaded.

```
520 \cs_new_protected:Nn \__enumext_renew_footnote_starred:
521    {
522      \IfDocumentMetadataTF
523        {
524          \__enumext_renew_footnote_mini:
525        }
526        {
527          \bool_if:NF \l__enumext_footnotes_key_bool
528            {
529              \__enumext_renew_footnote_mini:
530            }
531        }
532    }
533 \cs_new_protected:Nn \__enumext_print_footnote_starred:
534    {
535      \IfDocumentMetadataTF
536        {
537          \__enumext_print_footnote_mini:
538        }
539        {
540          \bool_if:NF \l__enumext_footnotes_key_bool
541            {
542              \__enumext_print_footnote_mini:
543            }
544        }
545    }
```

In enumext* and keyans* environments we need to use *"hooks"* to print \footnote with support for *tagged* PDF.

```
546 \__enumext_after_env:nn { enumext* }
547    {
548      \__enumext_print_footnote_starred:
549    }
550 \__enumext_after_env:nn { keyans* }
551    {
552      \__enumext_print_footnote_starred:
553    }
```

(*End of definition for* __enumext_renew_footnote_standar: *and others.*)

13.9   The internal minipage environment

__enumext_internal_mini_page:
__enumext_mini_env*

The function __enumext_internal_mini_page: creates a internal __enumext_mini_page environment (*custom version* of minipage) setting the \if@minipage switch to *"false"* to allow spaces at the *"above"* of the environment, plus we will add \skip_vertical:N \c_zero_skip to maintain alignment on *"top"* in the first part and \skip_vertical:N \c_zero_skip in the second part to allow spaces *"below"*. This environment will be used internally by the mini-env key, it is NOT documented in the user interface and is for internal use only. Within this environment we redefine \footnote to make them look the same as if they were elsewhere in the document. This function is passed to the function __enumext_safe_exec: in the enumext environment definition (§13.42) and __enumext_safe_exec_vii: in the enumext* environment definition (§13.47)

```
554 \cs_new_protected:Nn \__enumext_internal_mini_page:
555    {
556      \int_compare:nNnT { \l__enumext_level_int } = { 0 }
557        {
558          \DeclareDocumentEnvironment{__enumext_mini_page}{ m }
559            {
560              \__enumext_renew_footnote_standar:
561              \__enumext_minipage:w [ t ] { ##1 }
562                \legacy_if_gset_false:n { @minipage }
563                \skip_vertical:N \c_zero_skip
564            }
565            {
566              \skip_vertical:N \c_zero_skip
567              \__enumext_endminipage:
568              \__enumext_print_footnote_standar:
569            }
570        }
571    }
```

(*End of definition for* `\__enumext_internal_mini_page:` *and* `__enumext_mini_env*`.)

13.10 Definition of public dimension

The package enumext only provides a single public dimension `\itemwidth` and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the wrap-ans key at its default value.

```
572 \dim_zero_new:N \itemwidth
```

13.11 Definition of counters

`\__enumext_define_counter:Nn`

enumXi
enumXii
enumXiii
enumXiv
enumXv
enumXvi
enumXvii
enumXviii

To create the necessary *"counters"* we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1 : A token list `\l__enumext_counter_X_tl` for *"store"* the counter's name.

#2 : The counter's name.

```
573 \cs_new_protected:Npn \__enumext_define_counter:Nn #1 #2
574   {
575     \cs_if_exist:cTF { c@ #2 }
576       { \msg_fatal:nnn { enumext } { counters }{ #2 } }
577       {
578         \tl_set:Nn #1 { #2 }
579         \newcounter { #2 }
580       }
581   }
```

The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment, enumXvi for keyanspic environment, enumXvii for enumext* and enumXviii for the keyans* environments.

```
582 \__enumext_define_counter:Nn \l__enumext_counter_i_tl     { enumXi     }
583 \__enumext_define_counter:Nn \l__enumext_counter_ii_tl    { enumXii    }
584 \__enumext_define_counter:Nn \l__enumext_counter_iii_tl   { enumXiii   }
585 \__enumext_define_counter:Nn \l__enumext_counter_iv_tl    { enumXiv    }
586 \__enumext_define_counter:Nn \l__enumext_counter_v_tl     { enumXv     }
587 \__enumext_define_counter:Nn \l__enumext_counter_vi_tl    { enumXvi    }
588 \__enumext_define_counter:Nn \l__enumext_counter_vii_tl   { enumXvii   }
589 \__enumext_define_counter:Nn \l__enumext_counter_viii_tl  { enumXviii  }
```

(*End of definition for* `\__enumext_define_counter:Nn` *and others.*)

`\c@__enumext_resume_i_int`
`\c@__enumext_resume_ii_int`
`\c@__enumext_resume_iii_int`
`\c@__enumext_resume_iv_int`
`\c@__enumext_resume_vii_int`

In version 1.6 the command `\resetenumext` (§13.27) was added which internally uses `\counterwithin*` so for its correct operation, we will create *"real counters"* instead of the *"integer variables"* for the keys resume and resume*.

```
590 \cs_set_protected:Npn \__enumext_tmp:n #1
591   {
592     \cs_if_exist:cTF { c@ __enumext_resume_#1_int }
593       { \msg_fatal:nne { enumext } { counters }{ __enumext_resume_#1_int } }
594       {
595         \newcounter { __enumext_resume_#1_int }
596       }
597   }
598 \clist_map_inline:nn {i,ii,iii,iv,vii} { \__enumext_tmp:n {#1} }
```

(*End of definition for* `\c@__enumext_resume_i_int` *and others.*)

13.12 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using `\arabic*`, `\Alph*`, `\alph*`, `\Roman*` and `\roman*` to use them in the label key.

⚓ Direct support for this is provided since LaTeX release 2025-06-01[13], but we will keep the original implementation so as not to hinder the internal *"label and ref"* system.

`\__enumext_register_default_label_wd:Nn`

These ⟨*counters*⟩ will be used as default ⟨*labels*⟩ if the label key is not used for the different levels of the enumext, enumext*, keyans and keyans* environments, so it is necessary to get a default value for labelwidth from these ⟨*labels*⟩ at the same time.

```
599 \cs_new_protected:Npn \__enumext_register_default_label_wd:Nn #1 #2
600   {
601     \tl_const:cn { c__enumext_widest_ \cs_to_str:N #1 _tl } {#2}
602     \tl_gput_right:Nn \g__enumext_counter_styles_tl {#1}
603   }
604 \__enumext_register_default_label_wd:Nn \arabic { 0 }
```

```
605 \__enumext_register_default_label_wd:Nn \Alph    { M }
606 \__enumext_register_default_label_wd:Nn \alph    { m }
607 \__enumext_register_default_label_wd:Nn \Roman   { VIII }
608 \__enumext_register_default_label_wd:Nn \roman   { viii }
```

(*End of definition for* __enumext_register_default_label_wd:Nn.)

__enumext_label_width_by_box:Nn \
__enumext_label_width_by_box:cv

The function __enumext_label_width_by_box:Nn set the default \labelwidth using a box width if no labelwidth key is passed.

```
609 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
610   {
611     \hbox_set:Nn \l__enumext_label_width_by_box {#2}
612     \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
613   }
614 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

(*End of definition for* __enumext_label_width_by_box:Nn.)

__enumext_label_style:Nnn \
__enumext_label_style:cvn

The function __enumext_label_style:Nnn is used by the label key to creates the variables containing the ⟨*label style*⟩ and will allow to use \arabic*, \Alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, \Alph, \roman and \Roman) for example, looking for \roman* and replacing that by \roman{⟨*counter*⟩}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

```
615 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
616   {
617     \tl_clear_new:N #1
618     \tl_put_right:Ne #1 { \tl_trim_spaces:n {#3} }
619     \tl_gset_eq:NN \g__enumext_widest_label_tl #1
620     \tl_map_inline:Nn \g__enumext_counter_styles_tl
621       {
622         \tl_replace_all:Nne #1 { ##1* } { \exp_not:N ##1 {#2} }
623         \tl_greplace_all:Nne \g__enumext_widest_label_tl { ##1* }
624           { \tl_use:c { c__enumext_widest_ \cs_to_str:N ##1 _tl } }
625       }
626     \__enumext_label_width_by_box:Nn \l__enumext_current_widest_dim
627       { \tl_use:N \g__enumext_widest_label_tl }
628     \tl_set_eq:cN { the #2 } #1
629   }
630 \cs_generate_variant:Nn \__enumext_label_style:Nnn { cvn }
```

(*End of definition for* __enumext_label_style:Nnn.)

13.13 Setting keys associated with label

When *tagged* PDF is active \makelabel is redefined using \makebox to work correctly (§13.37). From the user side it is convenient to have a key that allows using this redefinition with \makebox without having \IfDocumentMetadataTF active.

mode-box

We define the key mode-box only for the *"first level"* of enumext and enumext* environments.

```
631 \cs_set_protected:Npn \__enumext_tmp:n #1
632   {
633     \keys_define:nn { enumext /  #1 }
634       {
635         mode-box .bool_set:N = \l__enumext_mode_box_bool,
636         mode-box .initial:n  = false,
637         mode-box .value_forbidden:n = true,
638       }
639   }
640 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* mode-box.)

font \
labelsep \
labelwidth \
wrap-label \
wrap-label*

Definition of keys font, labelsep, labelwidth, wrap-label and wrap-label* keys for enumext and keyans environments.

```
641 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
642   {
643     \keys_define:nn { enumext / #1 }
644       {
645         font        .tl_set:c   = { l__enumext_label_font_style_#2_tl },
646         font        .value_required:n = true,
647         labelsep    .dim_set:c  = { l__enumext_labelsep_#2_dim },
```

```
648        labelsep    .initial:n  = {0.3333em},
649        labelsep    .value_required:n = true,
650        labelwidth  .dim_set:c  = { l__enumext_labelwidth_#2_dim },
651        labelwidth  .value_required:n = true,
652        wrap-label  .cs_set_protected:cp = { __enumext_wrapper_label_#2:n } ##1,
653        wrap-label  .initial:n  = {##1},
654        wrap-label  .value_required:n = true,
655        wrap-label* .code:n = {
656                            \bool_set_true:c { l__enumext_wrap_label_opt_#2_bool }
657                            \keys_set:nn { enumext / #1 } { wrap-label = {##1} }
658                          },
659        wrap-label* .value_required:n = true,
660      }
661    }
662 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* font *and others.*)

align   The `align` key is implemented differently for *"starred"* and *"non starred"* environments. For compatibility with *tagged* PDF we must set \l__enumext_align_label_pos_X_str.

```
663 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
664   {
665     \keys_define:nn { enumext / #1 }
666       {
667         align .choice:,
668         align / left    .code:n =
669                        {
670                          \tl_clear:c { l__enumext_label_fill_left_#2_tl  }
671                          \tl_set:cn  { l__enumext_label_fill_right_#2_tl } { \hfill }
672                          \str_set:cn { l__enumext_align_label_pos_#2_str } { l }
673                        },
674         align / right   .code:n =
675                        {
676                          \tl_set:cn  { l__enumext_label_fill_left_#2_tl  } { \hfill }
677                          \tl_clear:c { l__enumext_label_fill_right_#2_tl }
678                          \str_set:cn { l__enumext_align_label_pos_#2_str } { r }
679                        },
680         align / center  .code:n =
681                        {
682                          \tl_set:cn { l__enumext_label_fill_left_#2_tl  } { \hfill }

706         align / unknown .code:n =
707                          \msg_error:nneee { enumext } { unknown-choice }
708                            { align } { left,~right,~ center } { \exp_not:n {##1} },
709         align .initial:n = left,
710         align .value_required:n = true,
711       }
712   }
713 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(*End of definition for* align.)

13.14   Setting label and ref keys

The implementation of the keys label and ref are part of the core of the package enumext, here the default values for ⟨*label*⟩, the value of the variables \l__enumext_label_X_tl, the default values for \labelwidth and the "*label and ref*" system.

13.14.1   Define and set label and ref keys for enumext environment

label
ref
\l__enumext_label_i_tl
\l__enumext_label_ii_tl
\l__enumext_label_iii_tl
\l__enumext_label_iv_tl

Here we set the default ⟨*labels*⟩ of the *four levels* of enumext environment, along with the default value for labelwidth key and ref key.

```
714  \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
715    {
716      \keys_define:nn { enumext / #1 }
717        {
718          label .code:n    = {
719                              \__enumext_label_style:cvn { l__enumext_label_#2_tl }
720                                { l__enumext_counter_#2_tl } {##1}
721                              \dim_set_eq:cN  { l__enumext_labelwidth_#2_dim }
722                                \l__enumext_current_widest_dim
723                            },
724          label .initial:n = #3,
725          label .value_required:n = true,
726          ref   .code:n    = \__enumext_standar_ref:n {##1},
727          ref   .value_required:n = true,
728        }
729    }
730  \__enumext_tmp:nnn { level-1 } {   i } { \arabic*.}
731  \__enumext_tmp:nnn { level-2 } {  ii } { (\alph*) }
732  \__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
733  \__enumext_tmp:nnn { level-4 } {  iv } { \Alph*.  }
```

(*End of definition for* label *and others.*)

__enumext_standar_ref:n
__enumext_standar_ref:

The __enumext_standard_ref:n function will first pass the key *argument* ref to the variable \l__enumext_ref_key_arg_tl and analyze its state, if it is not *empty* it will set a copy of of the *current counter style* save in \l__enumext_the_counter_X_tl to \l__enumext_ref_the_count_tl and then set the variable \l__enumext_renew_counter_X_tl which will modify \theenumX.

```
734  \cs_new_protected:Npn \__enumext_standar_ref:n #1
735    {
736      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
737      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
738        {
739          \msg_error:nnn { enumext } { key-ref-empty } { enumext }
740        }
741        {
742          \tl_set_eq:Nc \l__enumext_ref_the_count_tl
743            {
744              l__enumext_the_counter_ \__enumext_level: _tl
745            }
746          \tl_set:ce { l__enumext_renew_counter_ \__enumext_level: _tl }
747            {
748              \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
749                { \exp_not:V \l__enumext_ref_key_arg_tl }
750            }
751        }
752    }
```

Finally the function __enumext_standar_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

```
753  \cs_new_protected:Nn \__enumext_standar_ref:
754    {
755      \tl_if_empty:cF { l__enumext_renew_counter_ \__enumext_level: _tl }
756        {
757          \tl_use:c { l__enumext_renew_counter_ \__enumext_level: _tl }
758        }
759    }
```

(*End of definition for* __enumext_standar_ref:n *and* __enumext_standar_ref:.)

13.14.2   Define and set `label` and `ref` keys for `enumext*` and `keyans*` environments

label
ref
\l__enumext_label_vii_tl
\l__enumext_label_viii_tl

Here we set the default ⟨*labels*⟩ for enumext* and keyans* environments, along with the default value for labelwidth key and ref key.

```
760 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
761   {
762     \keys_define:nn { enumext / #1 }
763       {
764         label .code:n    = {
765                              \__enumext_label_style:cvn { l__enumext_label_#2_tl }
766                                { l__enumext_counter_#2_tl } {##1}
767                              \dim_set_eq:cN  { l__enumext_labelwidth_#2_dim }
768                                \l__enumext_current_widest_dim
769                            },
770         label .initial:n = #3,
771         label .value_required:n = true,
772         ref   .code:n    = \__enumext_starred_ref:n {##1},
773         ref   .value_required:n = true,
774       }
775   }
776 \__enumext_tmp:nnn { enumext* } {  vii } { \arabic*.}
777 \__enumext_tmp:nnn { keyans*  } { viii } { \Alph*) }
```

(*End of definition for* label *and others.*)

__enumext_starred_ref:n
__enumext_starred_ref:

The implementation of __enumext_starred_ref:n is the same as that used for the environment enumext.

```
778 \cs_new_protected:Npn \__enumext_starred_ref:n #1
779   {
780     \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
781     \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
782       {
783         \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
784           {
785             \msg_error:nnn { enumext } { key-ref-empty } { enumext* }
786           }
787           {
788             \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_vii_tl

806               }
807           }
808       }
809   }
```

Finally the function __enumext_starred_ref: will execute the modification for the reference system in the second argument of the enumext* and keyans* environment definition.

```
810 \cs_new_protected:Nn \__enumext_starred_ref:
811   {
812     \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
813       {
814         \tl_if_empty:NF \l__enumext_renew_counter_vii_tl
815           {
816             \tl_use:N \l__enumext_renew_counter_vii_tl
817           }
818       }
819     \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
820       {
```

```
821          \tl_if_empty:NF \l__enumext_renew_counter_viii_tl
822            {
823              \tl_use:N \l__enumext_renew_counter_viii_tl
824            }
825        }
826    }
```

(*End of definition for* `\__enumext_starred_ref:n` *and* `\__enumext_starred_ref:`.)

13.14.3   Define and set `label` and `ref` keys for `keyans` and `keyanspic` environments

label
ref
`\l__enumext_label_v_tl`
`\l__enumext_label_vi_tl`

Here we set the default ⟨*label*⟩ for `keyans` and `keyanspic` environment, along with the default value for `labelwidth` if it has not been established and `ref` key. The `keyanspic` environment use the same ⟨*label*⟩ as the `keyans` environment.

```
827 \keys_define:nn { enumext / keyans }
828    {
829      label .code:n    = {
830                          \__enumext_label_style:cvn { l__enumext_label_v_tl }
831                            { l__enumext_counter_v_tl } {#1}
832                          \__enumext_label_style:cvn { l__enumext_label_vi_tl }
833                            { l__enumext_counter_vi_tl } {#1}
834                          \dim_set_eq:NN
835                            \l__enumext_labelwidth_v_dim \l__enumext_current_widest_dim
836                        },
837      label .initial:n = \Alph*),
838      label .value_required:n = true,
839      ref    .code:n    = \__enumext_keyans_ref:n {#1},
840      ref    .value_required:n = true,
841    }
```

(*End of definition for* `label` *and others*.)

`\__enumext_keyans_ref:n`
`\__enumext_keyans_ref:`

The implementation of `\__enumext_keyans_ref:n` is the same as that used for the environment `enumext`.

```
842 \cs_new_protected:Npn \__enumext_keyans_ref:n #1
843    {
844      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
845      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
846        {
847          \msg_error:nnn { enumext } { key-ref-empty } { keyans }
848        }
849        {
850          \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
851          \tl_put_right:Ne \l__enumext_renew_counter_v_tl
852            {
853              \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V \l__
854            }
855        }
856    }
```

Finally the function `\__enumext_keyans_ref:` will execute the modification for the reference system in the second argument of the `keyans*` environment definition.

```
857 \cs_new_protected:Nn \__enumext_keyans_ref:
858    {
859      \tl_if_empty:NF \l__enumext_renew_counter_v_tl
860        {
861          \tl_use:N \l__enumext_renew_counter_v_tl
862        }
863    }
```

(*End of definition for* `\__enumext_keyans_ref:n` *and* `\__enumext_keyans_ref:`.)

13.15   Setting `start`, `start*` and `widest` keys

`\__enumext_start_from:NNn`
`\__enumext_start_from:ccn`
`\__enumext_start_from:cce`

The function `\__enumext_start_from:NNn` used by `start` and `start*` keys take three arguments:

#1: `\l__enumext_label_X_tl`
#2: `\l__enumext_start_X_int`
#3: ⟨*integer or string*⟩

The first argument of this function are the *"counter style"* set by `label` key, the second argument is returned by the function, the third argument can be an ⟨*integer*⟩ or ⟨*string*⟩ of the form `\Alph`, `\alph`, `\Roman` or `\roman`. This effectively allows `start*=A` or `start=1` to be used.

💧 In version 1.6 it is allowed to pass the `resume` key *without value* by means of the command `\setenumext`, for the correct operation of this we must set the boolean variable `\l__enumext_resume_count_bool` set by the `resume` key *without value* to *"false"* (§13.26). This is necessary to be able to "reset" the *start value* by means of the `start` or `start*` keys.

```
864 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
865   {
866     \bool_set_false:N \l__enumext_resume_count_bool
867     \__enumext_if_is_int:nTF { #3 }
868       {
869         \int_set:Nn #2 {#3}
870       }
871       {
872         \regex_if_match:nVT { \c{Alph} | \c{alph} } {#1}
873           { \int_set:Nn #2 { \int_from_alph:n {#3} } }
874         \regex_if_match:nVT { \c{Roman} | \c{roman} } {#1}
875           { \int_set:Nn #2  { \int_from_roman:n {#3} } }
876       }
877   }
878 \cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }
```

(*End of definition for* `\__enumext_start_from:NNn`.)

`\__enumext_widest_from:nNNn`
`\__enumext_widest_from:nccn`
The function `\__enumext_widest_from:nNNn` used by the `widest` key take four arguments:

`#1`: The counter associated with the environment level
`#2`: `\l__enumext_label_X_tl`
`#3`: `\l__enumext_labelwidth_X_dim`
`#4`: *⟨integer or string⟩*

The second and third arguments of this function are the values set by `label` and `labelwidth` keys, the four argument can be an *⟨integer⟩* or *⟨string⟩* of the form `\Alph`, `\alph`, `\Roman` or `\roman`. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a *"box"* and the *"width"* of the *"box"* is returned.

```
879 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
880   {
881     \__enumext_if_is_int:nTF {#4}
882       {
883         \setcounter{enumX#1} { #4 }
884       }
885       {
886         \regex_if_match:nVT { \c{Alph} | \c{alph} } {#2}
887           { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
888         \regex_if_match:nVT { \c{Roman} | \c{roman} } {#2}
889           { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
890       }
891     \__enumext_label_width_by_box:cv
892       { l__enumext_labelwidth_#1_dim } { l__enumext_label_#1_tl }
893   }
894 \cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }
```

(*End of definition for* `\__enumext_widest_from:nNNn`.)

`start`
`start*`
`widest`
Now define and set `start*`, `start` and `widest` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```
895 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
896   {
897     \keys_define:nn { enumext / #1 }
898       {
899         start* .code:n     = {
900                               \__enumext_start_from:ccn
901                                 { l__enumext_label_#2_tl }
902                                 { l__enumext_start_#2_int } {##1}
903                             },
904         start* .value_required:n = true,
905         start  .code:n     = {
906                               \__enumext_start_from:cce
907                                 { l__enumext_label_#2_tl }
908                                 { l__enumext_start_#2_int } { \int_eval:n {##1} }
909                             },
910         start  .initial:n = 1,
911         start  .value_required:n = true,
912         widest .code:n     = {
```

```
913                              \__enumext_widest_from:nccn {#2}
914                                { l__enumext_label_#2_tl }
915                                { l__enumext_labelwidth_#2_dim } {##1}
916                              },
917          widest .value_required:n = true,
918        }
919    }
920  \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* start *,* start* *, and* widest *.*)

13.16   Setting keys for penaltys

beginpenalty
midpenalty
endpenalty

The three parameters \@beginparpenalty, \@itempenalty and \@endparpenalty work together to en-sure that list environments look good, avoiding unsightly page breaks that can break the flow of the list, so it's a good idea to have a ⟨*keys*⟩ to access these.

```
921  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
922    {
923      \keys_define:nn { enumext / #1 }
924        {
925          beginpenalty .int_set:c = { l__enumext_beginparpenalty_#2_int },
926          beginpenalty .initial:n = -51,
927          beginpenalty .value_required:n = true,
928          midpenalty   .int_set:c = { l__enumext_itempenalty_#2_int },
929          midpenalty   .initial:n = -51,
930          midpenalty   .value_required:n = true,
931          endpenalty   .int_set:c = { l__enumext_endparpenalty_#2_int },
932          endpenalty   .initial:n = -51,
933          endpenalty   .value_required:n = true,
934        }
935    }
936  \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* beginpenalty *,* midpenalty *, and* endpenalty *.*)

13.17   Setting keys for vertical spaces

topsep
partopsep
parsep
noitemsep
nosep

Define and set topsep, partopsep, parsep, itemsep, noitemsep and nosep keys for enumext, enumext*, keyans and keyans* environments.

```
937  \cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
938    {
939      \keys_define:nn { enumext / #1 }
940        {
941          topsep    .skip_set:c = { l__enumext_topsep_#2_skip },
942          topsep    .initial:n  = {#3},
943          topsep    .value_required:n = true,
944          partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
945          partopsep .initial:n  = {#4},
946          partopsep .value_required:n = true,
947          parsep    .skip_set:c = { l__enumext_parsep_#2_skip },
948          parsep    .initial:n  = {#5},
949          parsep    .value_required:n = true,
950          itemsep   .skip_set:c = { l__enumext_itemsep_#2_skip },
951          itemsep   .initial:n  = {#6},
952          itemsep   .value_required:n = true,
953          noitemsep .meta:n     = { itemsep = 0pt, parsep = 0pt },
954          noitemsep .value_forbidden:n = true,
955          nosep     .meta:n     = {
956                                    itemsep = 0pt, parsep= 0pt,
957                                    topsep = 0pt, partopsep = 0pt,
958                                  },
959          nosep     .value_forbidden:n = true,
960        }
961    }
```

Now we set the values based on standard article class in 10pt.

```
962  \__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
963    { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
964    { 4.0pt plus 2.0pt minus 1.0pt }
965  \__enumext_tmp:nnnnnn { level-2 } { ii } { 4.0pt plus 2.0pt minus 1.0pt }
966    { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
967    { 2.0pt plus 1.0pt minus 1.0pt }
```

```
968  \__enumext_tmp:nnnnnn { level-3 } { iii } { 2.0pt plus 1.0pt minus 1.0pt }
969    { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
970  \__enumext_tmp:nnnnnn { level-4 } { iv } { 2.0pt plus 1.0pt minus 1.0pt }
971    { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
972  \__enumext_tmp:nnnnnn { keyans  } { v }{ 4.0pt plus 2.0pt minus 1.0pt }
973    { 2.0pt plus 1.0pt minus 1.0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
974    { 2.0pt plus 1.0pt minus 1.0pt }
975  \__enumext_tmp:nnnnnn { enumext* } { vii } { 8.0pt plus 2.0pt minus 4.0pt }
976    { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
977    { 4.0pt plus 2.0pt minus 1.0pt }
978  \__enumext_tmp:nnnnnn { keyans* } { viii } { 4.0pt plus 2.0pt minus 1.0pt }
979    { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
980    { 2.0pt plus 1.0pt minus 1.0pt }
```

(*End of definition for* `topsep` *and others.*)

13.18 Setting `base-fix` key

When nesting starting right after `\item` (without material between them) there is a problem with the alignment of the *baseline* between the two environments. One way to get around this problem is to place `\mode_leave_vertical:` apply `\vspace{-\baselineskip}` and set `\topsep=0pt` for the *"first level"* of the nested `enumext` environment.

base-fix
`\__enumext_nested_base_line_fix:`

We define the key `base-fix` only for the *"first level"* of `enumext` environment.

```
981  \keys_define:nn { enumext /  level-1 }
982    {
983      base-fix .bool_set:N = \l__enumext_base_line_fix_bool,
984      base-fix .initial:n  = false,
985      base-fix .value_forbidden:n = true,
986    }
```

The function `\__enumext_nested_base_line_fix:` passed to the `\__enumext_parse_keys:n` function in the definition of the `enumext` environment (§13.42) will be responsible for applying the *baseline correction* and adjusting the ⟨*keys*⟩ for the `enumext` environment and the `\printkeyans` with *starred argument* '`*`' (§13.50).

We will first implement the function code from the user side of the `base-fix` key, that is, only the user knows when it is necessary to apply it within the document in which case the variable `\l__enumext_print_-keyans_star_bool` set by the `\printkeyans` command is false and the variable `\l__enumext_base_-line_fix_bool` is true.

We set the values of the keys `topsep`, `above` and `above*` for the *"first level"* of `enumext` environment equal to `0pt` and finally set the variable `\l__enumext_base_line_fix_bool` to false.

```
987  \cs_new_protected:Nn \__enumext_nested_base_line_fix:
988    {
989      \bool_lazy_all:nT
990        {
991          { \bool_if_p:N \l__enumext_starred_first_bool }
992          { \bool_if_p:N \l__enumext_base_line_fix_bool }
993          { \bool_not_p:n { \l__enumext_print_keyans_star_bool } }
994        }
995        {
996          \mode_leave_vertical:
997          \vspace { -\dim_eval:n { \baselineskip + \parsep } }
998          \keys_set:nn { enumext / level-1 }
999            {
1000              topsep = 0pt, above = 0pt, above* = 0pt,
1001            }
1002        }
```

When we are running the `\printkeyans` command with the *starred argument* '`*`' the variable `\l__-enumext_print_keyans_star_bool` is true and we can run a simplified version of `\vspace` using `\skip_vertical:n`.

```
1003        \bool_lazy_and:nnT
1004          { \bool_if_p:N \l__enumext_starred_first_bool }
1005          { \bool_if_p:N \l__enumext_print_keyans_star_bool }
1006          {
1007            \mode_leave_vertical:
1008            \skip_vertical:n { -\baselineskip }
1009            \skip_vertical:N \c_zero_skip
1010            \keys_set:nn { enumext / level-1 }
1011              {
1012                topsep = 0pt, above = 0pt, above* = 0pt,
```

```
1013              }
1014            }
1015        \bool_set_false:N \l__enumext_base_line_fix_bool
1016      }
```

(*End of definition for* base-fix *and* __enumext_nested_base_line_fix:.)

13.19   Setting keys for horizontal spaces

itemindent   Define and set `itemindent`, `rightmargin`, `listparindent`, `list-offset` and `list-indent` keys for
rightmargin   `enumext`, `enumext*`, `keyans` and `keyans*` environments.
listparindent
list-offset
list-indent

```
1017 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1018   {
1019     \keys_define:nn { enumext / #1 }
1020       {
1021         itemindent    .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1022         itemindent    .value_required:n = true,
1023         rightmargin   .dim_set:c = { l__enumext_rightmargin_#2_dim },
1024         rightmargin   .value_required:n = true,
1025         listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1026         listparindent .value_required:n = true,
1027         list-offset   .dim_set:c = { l__enumext_listoffset_#2_dim },
1028         list-offset   .value_required:n = true,
1029         list-indent   .code:n    =
1030                          \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
1031                          \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
1032         list-indent   .value_required:n = true,
1033       }
1034   }
1035 \clist_map_inline:nn
1036   {
1037     {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
1038   }
1039   { \__enumext_tmp:nn #1 }
```

(*End of definition for* itemindent *and others.*)

For `enumext*` and `keyans*` environments the situation is a bit different, the `list-indent` key behaves like the `list-offset` key.

```
1040 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1041   {
1042     \keys_define:nn { enumext / #1 }
1043       {
1044         itemindent    .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1045         itemindent    .value_required:n = true,
1046         rightmargin   .dim_set:c = { l__enumext_rightmargin_#2_dim },
1047         rightmargin   .value_required:n = true,
1048         listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1049         listparindent .value_required:n = true,
1050         list-offset   .dim_set:c = { l__enumext_listoffset_#2_dim },
1051         list-offset   .value_required:n = true,
1052         list-indent   .meta:n    = { list-offset = ##1 },
1053         list-indent   .value_required:n = true,
1054       }
1055   }
1056 \clist_map_inline:nn
1057   {
1058     {enumext*}{vii}, {keyans*}{viii}
1059   }
1060   { \__enumext_tmp:nn #1 }
```

13.19.1   Functions for setting the fake `itemindent`

__enumext_fake_item_indent: The `itemindent` key does not set the value of `\itemindent`, it only sets the value of the *horizontal space*
__enumext_keyans_fake_item_indent: applied using `\skip_horizontal:N`. We will store this value in the variable and only apply it when it is greater
__enumext_fake_item_indent_vii: than `0pt`. Here I will need to place `\mode_leave_vertical:` and the plain TeX macro `\ignorespaces` to
__enumext_fake_item_indent_viii: avoid unwanted extra space when using the `itemindent` key.

```
1061 \cs_set_protected:Nn \__enumext_fake_item_indent:
1062   {
1063     \dim_compare:nNnT

13.22   Setting keys for `multicols` and `minipage`

`mini-env`
`mini-sep`
`columns-sep`
`columns`

The default value of the `columns-sep` key is handled by the state of the boolean variable `\l__enumext_-columns_sep_X_bool` which is handled in the internal definition of the enumext and keyans environments. Define and set `mini-env`, `mini-sep`, `columns-sep` and `columns` keys for enumext, enumext*, keyans and keyans* environments.

```
1202  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1203    {
1204      \keys_define:nn { enumext / #1 }
1205        {
1206          mini-env    .dim_set:c  = { l__enumext_minipage_right_#2_dim },
1207          mini-env    .value_required:n = true,
1208          mini-sep    .dim_set:c  = { l__enumext_minipage_hsep_#2_dim },
1209          mini-sep    .initial:n  = 0.3333em,
1210          mini-sep    .value_required:n = true,
1211          columns-sep .dim_set:c  = { l__enumext_columns_sep_#2_dim },
1212          columns-sep .value_required:n = true,
1213          columns     .int_set:c  = { l__enumext_columns_#2_int },
1214          columns     .initial:n  = 1,
1215          columns     .value_required:n = true,
1216        }
1217    }
1218  \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For enumext* and keyans* environments the situation is a bit different, the command `\miniright` is not available, so we will add the keys `mini-right` and `mini-right*` to implement support for `minipage` environment.

```
1219  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1220    {
1221      \keys_define:nn { enumext / #1 }
1222        {
1223          mini-right  .tl_gset:c = { g__enumext_miniright_code_#2_tl },
1224          mini-right  .value_required:n = true,
1225          mini-right* .code:n    = {
```

```
1226                              \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
1227                              \keys_set:nn { enumext / #1 } { mini-right = {##1} }
1228                           },
1229          mini-right* .value_required:n = true,
1230      }
1231  }
1232 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(*End of definition for* `mini-env` *and others.*)

13.23 Adjustment of vertical spaces for `multicols`

When nesting a *"list environment"* inside the `multicols` environment, the values of the *"vertical spaces"* are lost, basically the `multicols` environment takes control over them. Graphically it can be seen like in the figure 7.

Figure 7: Representation of the vertical space in `multicols` for a nested level.

To keep the desired spaces *above* and *below* in the *"list environment"* (`\topsep` + [`\partopsep`]) it is necessary to *"adjust"* the spaces added by the `multicols` environment. The most appropriate option in this case is to use a *"context sensitive"* vertical space with `\addvspace`.

💣 I should make it clear that the implementation here is a *"bit questionable"*. At first glance doing `\multicolsep=\topsep` seemed right, but the results were not always as expected. An almost *imperceptible* detail is that in some cases the `\itemsep` values of are *"stretched"*, possibly due to the use of `\raggedcolumns` and this affects the lower space when closing the environment, which is *"smaller"* than expected. My attempts to find the correct values using `\showoutput` and `\showboxdepth` absolutely failed.

13.23.1 Adjustment of vertical spaces for `multicols` in enumext

`\__enumext_multi_set_vskip:` The function `\__enumext_multi_set_vskip:` will take care of determining the *"adjusted spaces"* that we will apply *"above"* and *"below"* the `multicols` environment in `enumext`.

We will set the default values taking into account that TeX is in ⟨*horizontal mode*⟩, then we will make the settings for the ⟨*vertical mode*⟩ in which `\partopsep` comes into play.

Set the values of `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_-skip` equal to the value of `\topsep` in the *current level*.

```
1233 \cs_new_protected:Nn \__enumext_multi_set_vskip:
1234   {
1235     \skip_set:cn { l__enumext_multicols_above_ \__enumext_level: _skip }
1236       {
1237         \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1238       }
1239     \skip_set:cn { l__enumext_multicols_below_ \__enumext_level: _skip }
1240       {
1241         \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1242       }
1243     \__enumext_add_pre_parsep:
1244   }
```

(*End of definition for* `\__enumext_multi_set_vskip:`.)

`\__enumext_add_pre_parsep:` The function `\__enumext_add_pre_parsep:` *"adjusted"* the value of `\l__enumext_multicols_above_-X_skip` detecting the value of `\parsep` from the previous level. This is necessary since `\parsep` from the previous level affects the *vertical spaces*.

```
1245 \cs_new_protected:Nn \__enumext_add_pre_parsep:
1246   {
1247     \int_case:nn { \l__enumext_level_int }
1248       {
1249         { 2 }{
1250             \skip_if_eq:nnF { \l__enumext_parsep_i_skip } { \c_zero_skip }
1251               {
1252                 \skip_add:Nn \l__enumext_multicols_above_ii_skip
1253                   {
1254                     \l__enumext_parsep_i_skip
1255                   }
1256               }
1257             }
```

```

13.24 Adjustment of vertical spaces for minipage

When nesting a *"list environment"* within the minipage environment, the values of the *"vertical spaces"* are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the *"left"* and *"right"* environments *"aligned on top"*, preserving the \baselineskip and keep the desired *"spaces"* (\topsep + [\partopsep]) it is necessary to *"adjust"* the *"vertical spaces"* for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=0pt and to this is added the \partopsep parameter that comes into action according to whether TeX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩. Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the *"desired vertical spacing"*.

🌿 Again I must make clear that the implementation here is a *"bit questionable"*, but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more *"trial and error"* (approx to \strutbox), using the help of the lua-visual-debug[15] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.24.1 Adjustment of vertical spaces for minipage in enumext

__enumext_minipage_set_skip:
__enumext_minipage_add_space:

The function __enumext_minipage_set_skip: will take care of determining the *"adjust"* spaces that we will apply *"above"* and *"below"* the __enumext_mini_page environment in enumext.

First we will set the value of \l__enumext_minipage_right_skip equal to \topsep, then we will see if TeX is in ⟨*vertical mode*⟩ and we will add \partopsep, followed by that we set the value of \l__enumext_-minipage_after_skip.

```
1323  \cs_new_protected:Nn \__enumext_minipage_set_skip:
1324    {
1325      \skip_set:Nn \l__enumext_minipage_right_skip
1326        {
1327          \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1328        }
1329      \mode_if_vertical:T
1330        {
1331          \skip_add:Nn \l__enumext_minipage_right_skip
1332            {
1333              \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
1334            }
1335        }
1336      \skip_set_eq:NN \l__enumext_minipage_after_skip \l__enumext_minipage_right_skip
```

We will adjust the values \l__enumext_multicols_above_X_skip and \l__enumext_multicols_-below_X_skip and call the function __enumext_pre_itemsep_skip:.

```
1337      \skip_set_eq:cN
1338        { l__enumext_multicols_above_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1339      \skip_set_eq:cN
1340        { l__enumext_multicols_below_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1341      \__enumext_pre_itemsep_skip:
```

If the environment multicols is active, we set \topskip=0pt and then we make \multicolsep have the same value as \l__enumext_multicols_above_X_skip.

```
1342      \int_compare:nNnT
1343        { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
1344        {
1345          \skip_zero:N \topskip
```

```
1346        \skip_set_eq:Nc \multicolsep { l__enumext_multicols_above_ \__enumext_level: _skip }
1347      }
1348    }
```

The function `\__enumext_minipage_add_space:` will apply the spaces on the *"left side"* using `\addvspace` *"above"* the `__enumext_mini_page` environment, taking into account whether TEX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩. Here we use the plain TEX macro `\nointerlineskip` to prevent baseline *"glue"* being added between the next pair of boxes in a *vertical list*. For the latter we will make some adjustments since the `\partopsep` parameter comes into play and this affects the *vertical spacing*.

```
1349  \cs_new_protected:Nn \__enumext_minipage_add_space:
1350    {
1351      \__enumext_minipage_set_skip:
1352      \__enumext_unskip_unkern:
1353      \mode_if_vertical:TF
1354        {
1355          \nopagebreak\nointerlineskip
1356        }
1357        {
1358          \par\nopagebreak\nointerlineskip
1359          \skip_zero:c { l__enumext_partopsep_ \__enumext_level: _skip }
1360        }
1361      \int_compare:nNnTF
1362        { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
1363        {
1364          \addvspace{ 0.445\box_ht:N \strutbox }
1365        }
1366        {
1367          \addvspace{ 0.250\box_ht:N \strutbox }
1368        }
1369    }
```

(*End of definition for* `\__enumext_minipage_set_skip:` *and* `\__enumext_minipage_add_space:`.)

`\__enumext_pre_itemsep_skip:`   The function `\__enumext_pre_itemsep_skip:` will adjust the spaces below the environment `minipage` and the environment `multicols` if it is nested in it, taking into account the value of `\itemsep` from the previous level.

```
1370  \cs_new_protected:Nn \__enumext_pre_itemsep_skip:

1641      \addvspace { \l__enumext_minipage_left_skip }
1642    }
```

(*End of definition for* __enumext_mini_addvspace_vii: *and* __enumext_mini_addvspace_viii:.)

13.24.4 The command \miniright

The command \miniright will close the __enumext_mini_page environment on the *"left side"*, open the __enumext_mini_page environment on the *"right side"* adding the *adjusted vertical space*. By default we will add \centering when starting the *"right side"* environment. The *starred argument* '*' inhibits the use of \centering command i.e. the usual LaTeX justification is maintained in the __enumext_mini_page on the *"right side"*.

\miniright

First we will perform some checks to prevent the command from being executed outside the enumext environment or somewhere inappropriate then we will call the internal functions to execute it in the enumext and keyans environments.

```
1643  \NewDocumentCommand \miniright { s }
1644    {
1645      \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
1646        {
1647          \msg_error:nnn { enumext } { wrong-miniright-place }
1648        }
1649      % outside
1650      \bool_lazy_and:nnT
1651        { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
```

```
1652        { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
1653        {
1654            \msg_error:nnn { enumext } { wrong-miniright-place }
1655        }
1656    % starred env
1657    \bool_lazy_and:nnT
1658        { \bool_if_p:N \g__enumext_starred_bool }
1659        { \bool_not_p:n { \l__enumext_standar_bool } }
1660        {
1661            \msg_error:nnn { enumext } { wrong-miniright-starred }
1662        }
1663    % exec
1664    \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
1665        {
1666            \__enumext_keyans_mini_right_cmd:n {#1}
1667        }
1668        { \__enumext_mini_right_cmd:n {#1} }
1669    }
```

(*End of definition for* \miniright. *This function is documented on page 12.*)

__enumext_mini_right_cmd:n   The function __enumext_mini_right_cmd:n takes as argument the *starred* '*' of the \miniright command in the enumext environment. We check if the mini-env key is active via the variable \l__enumext_-minipage_right_X_dim, if so we close the multicols environment with the __enumext_mini_page environment on the *"left side"*, then we open the __enumext_mini_page environment on the *"right side"*, apply our adjusted *"vertical spaces"*, followed by adding the \centering command when the *starred argument* '*' is not present and set zero \g__enumext_minipage_stat_int, otherwise we return an error.

```

13.25   Setting above and below keys

While having controlled the *vertical spaces* within the enumext and keyans environments when using the columns or mini-env keys, sometimes the *"vertical spaces above"* or *"vertical spaces below"* the environments are not as expected and it is necessary to be able to apply a *"fine correction"* to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of ⟨*keys*⟩ dedicated to this purpose, in this case it is best to use \vspace or \vspace* when convenient.

above
above*
below
below*

Define above, above*, below and below* keys for enumext and keyans environments.

```
1726 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1727   {
1728     \keys_define:nn { enumext / #1 }
1729       {
1730         above  .skip_set:c = { l__enumext_vspace_above_#2_skip },
1731         above  .value_required:n = true,
1732         above* .code:n     = \bool_set_true:c { l__enumext_vspace_a_star_#2_bool }
1733                              \keys_set:nn { enumext / #1 } { above = {##1} },
1734         above* .value_required:n = true,
1735         below  .skip_set:c = { l__enumext_vspace_below_#2_skip },
1736         below  .value_required:n = true,
1737         below* .code:n     = \bool_set_true:c { l__enumext_vspace_b_star_#2_bool }
1738                              \keys_set:nn { enumext / #1 } { below = {##1} },
1739         below* .value_required:n = true,
1740       }
1741   }
1742 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* above *and others.*)

13.25.1   Functions for above and below keys in enumext

__enumext_vspace_above: The function __enumext_vspace_above: apply the *vertical space above* the enumext environment set by the above* and above keys.

```
1743 \cs_new_protected:Nn \__enumext_vspace_above:
1744   {
1745     \skip_if_eq:nnF

13.26   Setting series, resume and resume* keys

The series key is responsible for the whole process of the resume and resume* keys. The idea behind this is
to be able to absorb the ⟨keys⟩ passed to the *optional argument* of the environments enumext and enumext*,
but, discarding some specific ⟨keys⟩.

series   We define the keys series, resume and resume* for the *"all levels"* of enumext and enumext*. Here we
resume   do not need to make sure that \printkeyans is not running otherwise the *start value* of the environments
resume*   would be increased when using resume or resume* keys.

```
1837  \cs_set_protected:Npn \__enumext_tmp:n #1
1838    {
1839      \keys_define:nn { enumext / #1 }
1840        {
1841          series  .str_set:N = \l__enumext_series_name_str,
1842          series  .value_required:n = true,
1843          resume* .code:n    = {
1844                                  \bool_if:NF \l__enumext_print_keyans_cmd_bool
1845                                    {
1846                                      \__enumext_resume_star:
1847                                    }
1848                                },
1849          resume* .value_forbidden:n = true,
1850        }
1851    }
1852  \clist_map_inline:nn {level-1, level-2, level-3, level-4, enumext*} { \__enumext_tmp:n {#1} }
```

In version 1.6 it is allowed to pass the key resume *without value* by means of the command \setenumext,
for the correct operation of this we must set the boolean variable \l__enumext_resume_count_bool set by
the key resume *without value* to "true" to be later processed by the function __enumext_parse_series:n
in the definition of the environments enumext and enumext*.

```
1853  \cs_set_protected:Npn \__enumext_tmp:n #1
1854    {
1855      \keys_define:nn { enumext / #1 }
1856        {
1857          resume .code:n = {
```

```
1858                              \bool_if:NF \l__enumext_print_keyans_cmd_bool
1859                                {

13.26.1 Internal function to save counter and integer values

__enumext_standar_save_counter:
__enumext_standar_save_counter_aux:
__enumext_starred_save_counter:
__enumext_starred_save_counter_aux:

The __enumext_standar_save_counter: and __enumext_starred_save_counter: functions will save the last counter value to \g__enumext_series_⟨*series name*⟩_int if the series={⟨*series name*⟩} key has been passed, to \c@__enumext_resume_X_int if it has passed the key resume *without value* and the key series is not active, in \g__enumext_series_⟨*series name*⟩_X_int if the key resume={⟨*series name*⟩} has been passed and in \g__enumext_series_⟨*store name*⟩_X_int if the key has been passed save-ans={⟨*store name*⟩}.

🎯 The variables \l__enumext_series_name_str and \l__enumext_series_name_tl contain the same {⟨*series name*⟩} but are executed at different moments, the integer variable with \l__enumext_series_name_str sets the value when execute series={⟨*series name*⟩} and the integer variable with \l__enumext_series_name_tl sets the subsequent values when use resume={⟨*series name*⟩}. This function is passed to the enumext environment definition (§13.42) and the enumext* environment definition (§13.47).

13.26.2 Internal function for resume counters

`\__enumext_resume_counter:` The `\__enumext_resume_counter:` function is executed by the `resume*` key and `resume` key *without value*, only the *"counters"* for the *"levels"* of the environments in which it is executed will be set. If the `save-ans` key is active it will set the *"counter"* according to the value of the integer variable created by that key.

13.26.3 Internal functions for series key

`\__enumext_filter_series:n`

`\__enumext_filter_series_key:n`

`\__enumext_filter_series_pair:nn`

The function `\__enumext_filter_series:n` will be in charge of filtering the ⟨*keys*⟩ we want to store where `#1` represents the *optional argument* passed to the environment. This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in chat-TeX-SX

```
2020    \cs_new:Npn \__enumext_filter_series:n #1
2021    {
2022      \use:e
2023        {
2024          \keyval_parse:NNn
2025            \__enumext_filter_series_key:n
2026            \__enumext_filter_series_pair:nn {#1}
2027        }
2028    }
```

The function `\__enumext_filter_series_key:n` will be responsible for filtering the ⟨*keys*⟩ that are passed "*without value*" by excluding the `resume`, `resume*`, `reset`, `reset*` and `base-fix` keys.

```
2029    \cs_new:Npn \__enumext_filter_series_key:n #1
2030    {
2031      \str_case:nnF {#1}
2032        {
2033          { resume } {} { resume* } {} { reset } {} { reset* } {} { base-fix } {}
2034        }
2035        { , { \exp_not:n {#1} } }
2036    }
```

The function `\__enumext_filter_series_pair:nn` will be responsible for filtering the ⟨keys⟩ that are passed *"with value"* by excluding the `series`, `resume`, `start`, `start*`, `save-ans` and `save-key` keys.

```
2037 \cs_new:Npn \__enumext_filter_series_pair:nn #1#2
2038   {
2039     \str_case:nnF {#1}
2040       {
2041         { series } {} { resume } {} { start } {}
2042         { start* } {}  { save-ans } {} { save-key } {}
2043       }
2044       { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2045   }
```

(*End of definition for* `\__enumext_filter_series:n`, `\__enumext_filter_series_key:n`, *and* `\__enumext_filter_series_-pair:nn`.)

`\__enumext_save_last_keys:n`
`\__enumext_resume_last_counter:`

The function `\__enumext_save_last_keys:n` will be in charge of saving the filtering ⟨keys⟩ when the keys `series={`⟨series name⟩`}` or `resume={`⟨series name⟩`}` are NOT active and will save them in the variable `\g__enumext_save_last_keys_X_tl` for the `enumext` environment and in the variable `\g__enumext_-save_last_keys_vii_tl` for the `enumext*` environment.

⬢ The value of boolean variable `\l__enumext_resume_series_X_bool` is set to "true" by the key `resume={`⟨series name⟩`}`, in this case we must make sure it is set to "false" so that it does not overwrite the default filtered ⟨keys⟩.

```
2046 \cs_new_protected:Npn \__enumext_save_last_keys:n #1
2047   {
2048     \int_compare:nNnT { \l__enumext_level_int } > { 0 }
2049       {
2050         \bool_if:cF { l__enumext_resume_series_ \__enumext_level: _bool }
2051           {
2052             \tl_gclear:c { g__enumext_save_last_keys_ \__enumext_level: _tl }
2053             \tl_gset:ce
2054               { g__enumext_save_last_keys_ \__enumext_level: _tl }
2055               { \__enumext_filter_series:n {#1} }
2056           }
2057       }
2058     \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
2059       {
2060         \bool_if:NF \l__enumext_resume_series_vii_bool
2061           {
2062             \tl_gclear:N \g__enumext_save_last_keys_vii_tl
2063             \tl_gset:Ne \g__enumext_save_last_keys_vii_tl { \__enumext_filter_series:n {#1} }
2064           }
2065       }
2066   }
```

The `\__enumext_resume_last_counter:` function will be in charge of setting the *"counters"* when the keys `series={`⟨series name⟩`}` or `resume={`⟨series name⟩`}` are NOT active and the `resume` key is being used *without value* either in the *optional argument* of the environments or through the `\setenumext` command.

⬢ The value of boolean variable `\l__enumext_resume_count_bool` is set to "true" by the key `resume` *without value* and set to "false" by the keys `start` and `start*` (§13.15).

```
2067 \cs_new_protected:Nn \__enumext_resume_last_counter:
2068   {
2069     \bool_lazy_and:nnT
2070       { \bool_if_p:N \l__enumext_resume_count_bool }
2071       { \tl_if_empty_p:N \l__enumext_series_name_tl }
2072       {
2073         \__enumext_resume_counter:
2074       }
2075   }
```

(*End of definition for* `\__enumext_save_last_keys:n` *and* `\__enumext_resume_last_counter:`.)

`\__enumext_parse_series:n`

The `\__enumext_parse_series:n` function handled by the `series` key will be responsible for *storing* the *filtered* ⟨keys⟩ from the *optional arguments* of the `enumext` and `enumext*` environments for the `resume` and `resume*` keys. If the `series` key is NOT active it will call the `\__enumext_save_last_keys:n` function to *store* the *filtered* ⟨keys⟩ that will be used by the `resume*` key and then the `\__enumext_resume_last_-counter:` function used by the `resume` key *without value* if it is active, otherwise *store* the *filtered* ⟨keys⟩ in the global variable `\g__enumext_series_`⟨series name⟩`_X_tl` along with the creation of the integer variable `\g__enumext_series_`⟨series name⟩`_X_int` used by the `resume` key *with value*.

⬢ This function is passed to the function `\__enumext_parse_keys:n` in the `enumext` environment definition (§13.42) and to the function `\__enumext_parse_keys_vii:n` in the `enumext*` environment definition (§13.47).

```
2076 \cs_new_protected:Npn \__enumext_parse_series:n #1
```

```
2077        {
2078          \str_if_empty:NTF \l__enumext_series_name_str
2079            {

```

(*End of definition for* `\__enumext_parse_series:n`.)

13.26.4 Internal functions for resume key with value

`\__enumext_resume:n`
`\__enumext_resume_vii:n`

The functions `\__enumext_resume:n` and `\__enumext_resume_vii:n` will handle the *argument* {⟨*series name*⟩} passed to the resume key in enumext and enumext* environments. First we will check if the global variable `\g__enumext_series_`⟨*series name*⟩`_X_tl` exists, if so we will call the function `\__enumext_-resume_series:n` and pass the ⟨*keys*⟩ stored in `\g__enumext_series_`⟨*series name*⟩`_X_tl` to the environments, otherwise we will return an error.

```
2119  \cs_new_protected:Npn \__enumext_resume:n #1
2120    {
2121      \int_compare:nNnT { \l__enumext_level_int } > { 0 }

(*End of definition for* __enumext_resume_star:.)

13.27   The \resetenumext command

Sometimes it is necessary to be able to reset the *"counters"* of the environments according to some value, for example \chapter. Since we use *"internal counters"* for the resume and resume* keys which set the *start value*, but are not accessible by the user, it is to provide a public command for this. This implementation is an adaptation of the answers given by Clea F. Rees (@cfr) and Jonathan P. Spratte (@Skillmon) in Correct implementation of optional argument (comma-separated) in expl3.

\resetenumext The \resetenumext command *"resets"* the *start value* of the *"counters"* for the enumext and enumext*
__enumext_standard_reset:nn environments along with the *"internal counters"* used by the keys resume *without value* and resume* according
__enumext_starred_reset:n to the value of {⟨*some counter*⟩}.
__enumext_reset_count_resume:nn
__enumext_reset_count_resume:en
__enumext_reset_count_resume_all:n
__enumext_reset_count_resume_levels:n

```
2238  \NewDocumentCommand \resetenumext { s o m }
2239    {
2240      \bool_if:nTF {#1}
2241        {

```

(*End of definition for* \resetenumext *and others. This function is documented on page 11.*)

13.28   The reset and reset* keys

The \resetenumext command does not work, for example, after an unnumbered chapter, so it is preferable to provide a pair of ⟨*keys*⟩ that adjust the internal variables if necessary.

reset
reset*

We define the keys reset and reset* for the *"all levels"* of enumext and enumext*.

```
2292  \cs_set_protected:Npn \__enumext_tmp:n #1
2293      {
2294          \keys_define:nn { enumext / #1 }
2295            {
2296              reset  .code:n = \__enumext_standard_reset_key:,
2297              reset  .value_forbidden:n = true,
2298              reset* .code:n = \__enumext_standard_reset_key_star:,
2299              reset* .value_forbidden:n = true,
2300            }
2301      }
2302  \clist_map_inline:nn {level-1, level-2, level-3, level-4} { \__enumext_tmp:n {#1} }
2303  \keys_define:nn { enumext / enumext* }
2304      {
2305          reset  .code:n = \__enumext_starred_reset_key:,
2306          reset  .value_forbidden:n = true,
2307          reset* .code:n = \__enumext_starred_reset_key:,
2308          reset* .value_forbidden:n = true,
2309      }
```

(*End of definition for* reset *and* reset*.)

13.28.1   Internal functions for reset and reset* keys

__enumext_standard_reset_key:
__enumext_standard_reset_key_star:
__enumext_starred_reset_key:

The function __enumext_standard_reset_key: will be handled by the reset key and will *"reset"* the counter \c@__enumext_resume_X_int to *"zero"* according to the *level* at which it is executed within the enumext environment.

```
2310  \cs_new_protected:Nn \__enumext_standard_reset_key:
2311    {
2312      \int_compare:nNnT { \l__enumext_level_int } > { 0 }
2313        {
2314          \int_if_exist:cT { c@ __enumext_resume_ \int_to_roman:n { \l__enumext_level_int } _int }
2315            {
2316              \int_gzero:c { c@ __enumext_resume_ \int_to_roman:n { \l__enumext_level_int } _int }
2317            }
2318        }
2319    }
```

The function __enumext_standard_reset_key_star: will be handled by the reset* key and will *"reset"* the counters \c@__enumext_resume_X_int to *"zero"* from the *level* at which it is executed within the enumext environment to the *lower levels*.

```
2320  \cs_new_protected:Nn \__enumext_standard_reset_key_star:
2321    {
2322      \cs_set:Npn \__enumext_tmp:n ##1
2323        {
2324          \int_if_exist:cT { c@ __enumext_resume_ \int_to_roman:n {##1} _int }
2325            {
2326              \int_gzero:c { c@ __enumext_resume_ \int_to_roman:n {##1} _int }
2327            }
2328        }
2329      \int_compare:nNnT { \l__enumext_level_int } > { 0 }
2330        {
2331          \int_step_function:nnN { \l__enumext_level_int } { 4 } \__enumext_tmp:n
2332        }
2333    }
```

The function __enumext_starred_reset_key: will be handled by reset keys and reset* will *"reset"* the counter \c@__enumext_resume_vii_int to *"zero"* when executed in the enumext* environment.

```
2334  \cs_new_protected:Nn \__enumext_starred_reset_key:
2335    {
2336      \int_gzero:c { c@ __enumext_resume_vii_int }
2337    }
```

(*End of definition for* __enumext_standard_reset_key: *,* __enumext_standard_reset_key_star: *, and* __enumext_starred_-reset_key: *.*)

13.29   Setting save-ans, check-ans and no-store keys

The key save-ans is directly associated with the keys check-ans, no-store, resume and resume*, this will activate the entire *"storage system"* in the enumext package.

13.29.1   Setting save-ans key

save-ans

We define the keys save-ans only for the *"first level"* of enumext and enumext*.

```
2338  \cs_set_protected:Npn \__enumext_tmp:n #1
2339    {
2340      \keys_define:nn { enumext / #1 }
2341        {
2342          save-ans .code:n = \__enumext_storing_set:n {##1},
2343          save-ans .value_required:n = true,
2344        }
2345    }
2346  \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* save-ans*.*)

13.29.2   Internal functions for save-ans key

__enumext_start_save_ans_msg:
__enumext_stop_save_ans_msg:

The functions __enumext_start_save_ans_msg: and __enumext_stop_save_ans_msg: will display in the terminal and .log file the environment in which the save-ans key was executed along with the line at the beginning and end of it. The function __enumext_start_save_ans_msg: will be passed to __enumext_storing_set:n and the function __enumext_stop_save_ans_msg: will be passed to the function __enumext_execute_after_env:.

```
2347  \cs_new_protected:Nn \__enumext_start_save_ans_msg:
2348    {
2349      \msg_term:nnVV { enumext } { save-ans-log }
```

```
2350            \g__enumext_envir_name_tl \l__enumext_store_name_tl
2351      }
2352    \cs_new_protected:Nn \__enumext_stop_save_ans_msg:
2353      {
2354      \msg_term:nnVV { enumext } { save-ans-log-hook }
2355            \g__enumext_envir_name_tl \g__enumext_store_name_tl
2356      }
```

(*End of definition for* __enumext_start_save_ans_msg: *and* __enumext_stop_save_ans_msg:*.*)

__enumext_storing_set:n
__enumext_storing_exec:

The function __enumext_storing_set:n first pass the value of the save-ans key to the variable \l__enumext_store_name_tl which will contain the {⟨*store name*⟩} of the *sequence* and *prop list* we will use. If \l__enumext_store_name_tl is *empty* we return an error message, otherwise will return the appropriate message __enumext_start_save_ans_msg: and proceed to execute the function __enumext_storing_exec: for enumext and enumext* environments.

```
2357  \cs_new_protected:Npn \__enumext_storing_set:n #1
2358    {
2359      \tl_set:Ne \l__enumext_store_name_tl {#1}
2360      \tl_if_empty:NTF \l__enumext_store_name_tl
2361        {
2362          \bool_lazy_or:nnT
2363            { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2364            {
2365              \msg_error:nnV { enumext } { save-ans-empty } \g__enumext_envir_name_tl
2366            }
2367        }
2368        {
2369          \bool_lazy_or:nnT
2370            { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2371            {
2372              \__enumext_start_save_ans_msg:
2373              \__enumext_storing_exec:
2374            }
2375        }
2376    }
```

The function __enumext_storing_exec: will set to true the variable \l__enumext_store_active_bool which activates the use of the \anskey command and the anskey*, keyans, keyans* and keyanspic environments and will set to "true" the variable \l__enumext_check_answers_bool used for internal checking answers mechanism set by the check-ans and no-store keys, copy {⟨*store name*⟩} into the variable \g__enumext_store_name_tl.

```
2377  \cs_new_protected:Nn \__enumext_storing_exec:
2378    {
2379      \bool_set_true:N \l__enumext_store_active_bool
2380      \bool_set_true:N \l__enumext_check_answers_bool
2381      \tl_gset:NV \g__enumext_store_name_tl \l__enumext_store_name_tl
```

The *prop list* \g__enumext_series_⟨*store name*⟩_prop and the *sequence* \g__enumext_series_⟨*store name*⟩_seq will be created globally to *"store content"* in case they do not exist together with the integer variable \g__enumext_series_⟨*store name*⟩_int used by the keys resume and resume*.

```
2382      \prop_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _prop }
2383        {
2384          \msg_log:nnV { enumext } { store-prop } \l__enumext_store_name_tl
2385          \prop_new:c { g__enumext_ \l__enumext_store_name_tl _prop }
2386        }
2387      \seq_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _seq }
2388        {
2389          \msg_log:nnV { enumext } { store-seq } \l__enumext_store_name_tl
2390          \seq_new:c { g__enumext_ \l__enumext_store_name_tl _seq }
2391        }
2392      \int_if_exist:cF { g__enumext_resume_ \l__enumext_store_name_tl _int }
2393        {
2394          \msg_log:nnV { enumext } { store-int } \l__enumext_store_name_tl

```

(*End of definition for* __enumext_storing_set:n *and* __enumext_storing_exec:*.*)

13.29.3   The check answer mechanism

The internal mechanism for *"checking answers"* follows this logic:

> If the line begins with `\item` or `\item*` and does NOT *open a nested environment*, each `\item` or `\item*` must contain a *single* execution of the `\anskey` command, i.e. the counter of the executions of the `\anskey` command must be equal to the counter associated with the sum of executions of `\item` and `\item*`.

> If the line begins with `\item` or `\item*` and *opens a nested environment* each `\item` or `\item*` in the nested environment must have a *single* execution of the `\anskey` command and the counter associated to the sum of `\item` and `\item*` executions must decrementing by *"one"* to maintain equality.

In order for the mechanism for the check-answer to work (not counting `keyans`, `keyans*` and `keyanspic`) we need:

1. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear within the environment including the nested levels.
2. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear per level of nesting.
3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each `\item` and `\item*` in the environment `\g__enumext_-item_number_int` must match the integer variable `\g__enumext_item_anskey_int` associated to the execution of the command `\anskey`. We analyze the cases:

a) If the list only has one level the number of `\item` + `\item*` = `\anskey`
b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the `\item` or `\item*` that opens the nest) so that the account remains the same.

With `keyans`, `keyans*` and `keyanspic` it is enough to increase in one the integer of `\anskey`. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a *"hook"* function after closing the *first level* of the environment.

13.29.4   Setting check-ans and no-store keys

check-ans
no-store

Now we define the keys `check-ans` and `no-store` for all levels of `enumext` and `enumext*` environments.

```
2398 \cs_set_protected:Npn \__enumext_tmp:n #1
2399   {
2400     \keys_define:nn { enumext / #1 }
2401       {
2402         check-ans .bool_set:N = \l__enumext_check_ans_key_bool,
2403         check-ans .initial:n  = false,
2404         check-ans .value_required:n = true,
2405         no-store  .code:n = {
2406                             \bool_set_false:N \l__enumext_check_answers_bool
2407                             \bool_set_false:N \l__enumext_check_ans_key_bool
2408                           },
2409         no-store  .value_forbidden:n = true,
2410       }
2411   }
2412 \clist_map_inline:nn
2413   {
2414     level-1, level-2, level-3, level-4, enumext*
2415   }
2416   { \__enumext_tmp:n {#1} }
```

(*End of definition for* check-ans *and* no-store.)

13.29.5   Set-up check answer mechanism

__enumext_check_ans_active:
__enumext_check_ans_level:

The function `\__enumext_check_ans_active:` will first check the state of the variable `\l__enumext_-store_name_tl`, that is, the `save-ans` key is active, if so it will check the state of the variable `\l__enumext_-check_answers_bool` handled by the key `no-store` and will execute the function `\__enumext_check_-ans_level:` only if *"true"*, i.e. the key `no-store` is not active.

```
2417 \cs_new_protected:Nn \__enumext_check_ans_active:
2418   {
2419     \tl_if_empty:NF \l__enumext_store_name_tl
2420       {
2421         \bool_if:NT \l__enumext_check_answers_bool
2422           {
2423             \__enumext_check_ans_level:
2424           }
2425       }
2426   }
```

The function __enumext_check_ans_level: will decrement by *"one"* the value of the variable \g__-enumext_item_number_int which keeps track of the executions of \item and \item* for each level of nesting of the environment enumext, taking into account whether it is nested within enumext* or the opposite and set \l__enumext_item_number_bool to *"false"*.

```
2427  \cs_new_protected:Nn \__enumext_check_ans_level:
2428    {
2429      \int_case:nn { \l__enumext_level_int }
2430        {
2431          { 1 }{
2432                \bool_lazy_all:nT
2433                  {
2434                    { \bool_if_p:N \g__enumext_starred_bool }
2435                    { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
2436                  }
2437                  {
2438                    \int_gdecr:N \g__enumext_item_number_int
2439                    \bool_set_false:N \l__enumext_item_number_bool
2440                  }
2441            }
2442          { 2 }{
2443                \int_gdecr:N \g__enumext_item_number_int
2444                \bool_set_false:N \l__enumext_item_number_bool
2445            }
2446          { 3 }{
2447                \int_gdecr:N \g__enumext_item_number_int
2448                \bool_set_false:N \l__enumext_item_number_bool
2449            }
2450          { 4 }{
2451                \int_gdecr:N \g__enumext_item_number_int
2452                \bool_set_false:N \l__enumext_item_number_bool
2453            }
2454        }
```

We should only execute this if enumext* is nested in the *"first level"* of enumext, for the rest of the cases the value of \g__enumext_item_number_int is already decreased.

```
2455      \int_case:nn { \l__enumext_level_h_int }
2456        {
2457          { 1 }{
2458                \bool_lazy_all:nT
2459                  {
2460                    { \bool_if_p:N \g__enumext_standar_bool }
2461                    { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
2462                  }
2463                  {
2464                    \int_gdecr:N \g__enumext_item_number_int
2465                    \bool_set_false:N \l__enumext_item_number_bool
2466                  }
2467            }
2468        }
2469    }
```

(*End of definition for* __enumext_check_ans_active: *and* __enumext_check_ans_level:.)

__enumext_check_ans_key_hook: The function __enumext_check_ans_key_hook: will *export* the status of the local variable \l__-enumext_check_ans_key_bool to the global variable \g__enumext_check_ans_key_bool only if the key check-ans is active.

```
2470  \cs_new_protected:Nn \__enumext_check_ans_key_hook:
2471    {
2472      \bool_lazy_and:nnT
2473        { \bool_if_p:N \l__enumext_check_ans_key_bool }
2474        { \bool_if_p:N \g__enumext_standar_bool }
2475        {
2476          \bool_gset_true:N \g__enumext_check_ans_key_bool
2477        }
2478      \bool_lazy_and:nnT
2479        { \bool_if_p:N \l__enumext_check_ans_key_bool }
2480        { \bool_if_p:N \g__enumext_starred_bool }
2481        {
2482          \bool_gset_true:N \g__enumext_check_ans_key_bool
2483        }
2484    }
```

(*End of definition for* __enumext_check_ans_key_hook:.)

__enumext_item_answer_diff:

The function __enumext_item_answer_diff: will set the value of the variable \g__enumext_item_-
answer_diff_int which is used by the functions __enumext_check_ans_show: for the key save-ans
and by the function __enumext_check_ans_log: by the internal *"check answer"* mechanism. This function
will be passed to the function __enumext_execute_after_env:.

```
2485 \cs_new_protected:Nn \__enumext_item_answer_diff:
2486   {
2487     \int_gset:Nn \g__enumext_item_answer_diff_int
2488       {
2489         \int_sign:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int }
2490       }
2491   }
```

(*End of definition for* __enumext_item_answer_diff:.)

__enumext_check_ans_show:
__enumext_check_ans_msg_less:
__enumext_check_ans_msg_same_ok:
__enumext_check_ans_msg_greater:

The function __enumext_check_ans_show: will be executed within the function __enumext_execute_-
after_env: when the key check-ans is active, that is, when \g__enumext_check_ans_key_bool is *"true"*
and will return the appropriate message according to the value of \g__enumext_item_answer_diff_int
set by the function __enumext_item_answer_diff:.

```
2492 \cs_new_protected:Nn \__enumext_check_ans_show:

2556    }
```

(*End of definition for* __enumext_check_starred_cmd:n.*)

13.30 Keys and functions associated with storage

13.30.1 Keys for marks, wrap and show

The enumext package provides a set of ⟨*keys*⟩ for manipulating *"symbol marks"* associated with *"answers"* and how they are displayed and stored in the *sequence* and *prop list* as well as an internal *"label and ref"* system.

mark-ans*   For the keyans and keyans* environments we will only add the keys mark-ans*, mark-pos*, mark-sep*,
mark-pos*   wrap-ans*, wrap-opt, save-sep, show-ans and show-pos.
mark-sep*
wrap-ans*
```
2557  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
```
wrap-opt
```
2558    {
```
save-sep
```
2559      \keys_define:nn { enumext / #1 }
```
show-ans
```
2560        {
```
show-pos
```
2561          mark-ans*  .tl_set:c  = { l__enumext_mark_answer_sym_#2_tl },
2562          mark-ans*  .initial:n = \textasteriskcentered,
2563          mark-ans*  .value_required:n = true,
2564          mark-pos*  .choice:,
2565          mark-pos* / left    .code:n = \str_set:cn { l__enumext_mark_position_#2_str } { l },
2566          mark-pos* / right   .code:n = \str_set:cn { l__enumext_mark_position_#2_str } { r },
2567          mark-pos* / center  .code:n = \str_set:cn { l__enumext_mark_position_#2_str } { c },
2568          mark-pos* / unknown .code:n =
2569                              \msg_error:nneee { enumext } { unknown-choice }
2570                                { mark-pos } { left,~right,~center } { \exp_not:n {##1} },
2571          mark-pos*  .initial:n = right,
2572          mark-pos*  .value_required:n = true,
2573          mark-sep*  .dim_set:c = { l__enumext_mark_sym_sep_#2_dim },
2574          mark-sep*  .value_required:n = true,
2575          wrap-ans*  .cs_set_protected:cp = { __enumext_keyans_wrapper_item_#2:n } ##1,
2576          wrap-ans*  .value_required:n = true,
2577          wrap-opt   .cs_set_protected:cp = { __enumext_keyans_wrapper_opt_#2:n } ##1,
2578          wrap-opt   .initial:n = [{##1}],
2579          wrap-opt   .value_required:n = true,
2580          save-sep   .tl_set:c = { l__enumext_store_keyans_item_opt_sep_#2_tl },
2581          save-sep   .initial:n = {,~},
2582          save-sep   .value_required:n = true,
2583          show-ans   .bool_set:N = \l__enumext_show_answer_bool,
2584          show-ans   .initial:n = false,
2585          show-ans   .value_required:n = true,
2586          show-pos   .bool_set:N = \l__enumext_show_position_bool,
2587          show-pos   .initial:n = false,
```

```
2588          show-pos   .value_required:n = true,
2589        }
2590    }
2591 \clist_map_inline:nn { {keyans}{v}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(*End of definition for* mark-ans* *and others.*)

mark-ref   We add the ⟨keys⟩ mark-ref and save-ref related to the *"storage system"* and internal mechanism of *"label*
save-ref   *and ref"* along with the ⟨keys⟩ show-ans, show-pos and the⟨keys⟩ mark-ans, mark-pos, mark-sep and
show-ans   wrap-ans for the command \anskey, the environment anskey* and the the ⟨keys⟩ for environments keyans
show-pos   and keyans* only at the *first level* of enumext and enumext*.

mark-ans
mark-pos
mark-sep
wrap-ans
mark-ans*
mark-pos*
mark-sep*
wrap-ans*
wrap-opt
save-sep

```
2592 \cs_set_protected:Npn \__enumext_tmp:n #1
2593   {
2594     \keys_define:nn { enumext / #1 }

```

(End of definition for `mark-ref` *and others.)*

13.30.2 Storing structure of the environments

The idea behind *"storing structure"* in the *sequence* is to have a copy of the *structure of the environment* in which the key `save-ans` is being executed so we must capture the *optional argument* passed to the levels of the environment in which it is executed and *"storing"* this in the *sequence*.

`\__enumext_store_active_keys:n`
`\__enumext_store_active_keys_vii:n`

The functions `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n` will be responsible for the *"storing keys"* filtered from the *optional argument* of the environment in which the key `save-ans` is executed and the levels within this for the `enumext` and `enumext*` environments. We will execute this function only if the variable `\l__enumext_store_save_key_X_bool` is false, that is, the key `store-key` is not active, establishing the variable `\l__enumext_store_save_key_X_tl` with the filtered ⟨*keys*⟩.

```
2662   \cs_new_protected:Npn \__enumext_store_active_keys:n #1
2663     {
2664        \bool_if:cF { l__enumext_store_save_key_ \__enumext_level: _bool }
2665          {
2666             \tl_clear:c { l__enumext_store_save_key_ \__enumext_level: _tl }
2667             \tl_set:ce
2668               { l__enumext_store_save_key_ \__enumext_level: _tl }
2669               { \__enumext_filter_save_key:n {#1} }
2670          }
2671     }
2672   \cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
2673     {
2674        \bool_if:NF \l__enumext_store_save_key_vii_bool
2675          {
2676             \tl_clear:N \l__enumext_store_save_key_vii_tl
2677             \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2678          }
2679     }
```

(End of definition for `\__enumext_store_active_keys:n` *and* `\__enumext_store_active_keys_vii:n`.)*

13.30.3 Setting save-key key

Since this *"storing structure"* in the *sequence* established by the `save-ans` key when executing `\anskey` or `anskey*`, we will not be able to modify it. The best thing here is to have a key that allows you to modify the *optional argument* of the *"storing structure"* in the *sequence*.

`save-key`

The values set by this key passed in the *optional argument* of the `enumext` and `enumext*` environments will override the values of the `\l__enumext_store_save_key_X_tl` variable set by the functions `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n`. Now define the key `save-key` for all levels of `enumext` and `enumext*` environments.

```
2680   \cs_set_protected:Npn \__enumext_tmp:n #1
2681     {
2682        \keys_define:nn { enumext / enumext* }
2683          {
2684             save-key  .code:n = \__enumext_parse_save_key_vii:n {##1},
2685             save-key  .value_required:n = true,
2686          }
2687        \keys_define:nn { enumext / #1 }
2688          {
2689             save-key  .code:n = \__enumext_parse_save_key:n {##1},
2690             save-key  .value_required:n = true,
2691          }
2692     }
2693   \clist_map_inline:nn { level-1, level-2, level-3, level-4 } { \__enumext_tmp:n {#1} }
```

(End of definition for `save-key`.*)*

__enumext_parse_save_key:n
__enumext_parse_save_key_vii:n

The functions __enumext_parse_save_key:n and __enumext_parse_save_key_vii:n will be responsible for *"storing keys"* in the variable \l__enumext_store_save_key_X_tl for enumext and enumext*.

```
2694 \cs_new_protected:Npn \__enumext_parse_save_key:n #1
2695   {
2696     \bool_set_true:c { l__enumext_store_save_key_ \__enumext_level: _bool }
2697     \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
2698     \tl_set:ce
2699       { l__enumext_store_save_key_ \__enumext_level: _tl }
2700       { \__enumext_filter_save_key:n {#1} }
2701   }
2702 \cs_new_protected:Npn \__enumext_parse_save_key_vii:n #1
2703   {
2704     \bool_set_true:N \l__enumext_store_save_key_vii_bool
2705     \tl_clear:N \l__enumext_store_save_key_vii_tl
2706     \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2707   }
```

(*End of definition for* __enumext_parse_save_key:n *and* __enumext_parse_save_key_vii:n.)

13.30.4 Internal functions to store optional arguments

__enumext_filter_save_key:n
__enumext_filter_save_key_key:n
__enumext_filter_save_key_pair:nn

The function __enumext_filter_save_key:n will be in charge of *"filtering keys"* we want to *stored* in *sequence* where {#1} represents the *optional argument* passed to the environment.

```
2708 \cs_new:Npn \__enumext_filter_save_key:n #1
2709   {
2710     \use:e
2711       {
2712         \keyval_parse:NNn
2713           \__enumext_filter_save_key_key:n
2714           \__enumext_filter_save_key_pair:nn {#1}
2715       }
2716   }
```

The function __enumext_filter_save_key_key:n will be responsible for *"filtering keys"* that are passed *"without value"* by excluding the resume, resume*, reset, reset*, no-store and base-fix keys.

```
2717 \cs_new:Npn \__enumext_filter_save_key_key:n #1
2718   {
2719     \str_case:nnF {#1}
2720       {
2721         { resume } {} { resume* } {} { reset } {} { reset* } {} { no-store } {} { base-fix } {}
2722       }
2723       { , { \exp_not:n {#1} } }
2724   }
```

The function __enumext_filter_save_key_pair:nn will be responsible for *"filtering keys"* that are passed *"with value"* by excluding the series, resume, save-ans, save-ref, save-key, check-ans, show-ans, save-pos, mark-ans, mark-pos, mark-sep, wrap-ans, mark-ans*, mark-pos*, mark-sep*, wrap-ans*, wrap-opt, save-sep, mark-ref, mini-env, mini-sep, mini-right and mini-right* keys.

```
2725 \cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
2726   {
2727     \str_case:nnF {#1}
2728       {
2729         { series    } {} { resume     } {} { save-ans    } {} { save-ref  } {}
2730         { save-key  } {} { check-ans  } {} { show-ans    } {} { show-pos  } {}
2731         { mark-ans  } {} { mark-pos   } {} { mark-sep    } {} { wrap-ans  } {}
2732         { mark-ans* } {} { mark-pos*  } {} { mark-sep*   } {} { wrap-ans* } {}
2733         { wrap-opt  } {} { save-sep   } {} { mark-ref    } {} { mini-env  } {}
2734         { mini-sep  } {} { mini-right } {} { mini-right* } {}
2735       }
2736       { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2737   }
```

(*End of definition for* __enumext_filter_save_key:n, __enumext_filter_save_key_key:n, *and* __enumext_filter_-save_key_pair:nn.)

13.30.5 Function for storing content in prop list

__enumext_store_addto_prop:n
__enumext_store_addto_prop:V

The function __enumext_store_addto_prop:n stores the {⟨content⟩} in *prop list* defined by save-ans key. The *"stored content"* is retrieved by means of the \getkeyans command.

The form in which the {⟨content⟩} is *"stored"* in the *prop list* is {⟨position⟩}{⟨content⟩}. This function is used by \anskey in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic* in keyanspic environment.

```
2738 \cs_new_protected:Npn \__enumext_store_addto_prop:n #1
```

```
2739    {
2740      \prop_gput_if_not_in:cen { g__enumext_ \l__enumext_store_name_tl _prop }
2741        {
2742          \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } + 1 }
2743        }
2744      { #1 }
2745    }
2746  \cs_generate_variant:Nn \__enumext_store_addto_prop:n { V }
```

(*End of definition for* __enumext_store_addto_prop:n.)

13.30.6 Function for storing content in sequence

__enumext_store_addto_seq:n
__enumext_store_addto_seq:v
__enumext_store_addto_seq:V

The function __enumext_store_addto_seq:n stores the {⟨*content*⟩} in *sequence* defined by save-ans key. This function is used by \anskey in enumext, \item* in keyans and \anspic in keyanspic.

The form in which the {⟨*content*⟩} is stored in *sequence* is in a internal enumext or enumext* environments with the *"same structure"* in which the command was executed.
The *"stored content"* is retrieved by means of the \printkeyans command.

```
2747  \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
2748    {
2749      \seq_gput_right:cn { g__enumext_ \l__enumext_store_name_tl _seq } { #1 }
2750    }
2751  \cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V }
```

(*End of definition for* __enumext_store_addto_seq:n.)

13.30.7 Functions for storing structure in the sequence

__enumext_store_level_open:
__enumext_store_level_close:

The *"storing structure"* is handled by the functions __enumext_store_level_open: and __enumext_-store_level_close: which are executed per level within the enumext environment.

```
2752  \cs_new_protected:Nn \__enumext_store_level_open:
2753    {
2754      \bool_if:NT \l__enumext_check_answers_bool
2755        {
2756          \tl_if_empty:cTF { l__enumext_store_save_key_ \__enumext_level: _tl }
2757            {
2758              \__enumext_store_addto_seq:n
2759                {
2760                  \item \begin{enumext}
2761                }
2762            }
2763            {
2764              \tl_put_left:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2765                {
2766                  \item \begin{enumext} [

2812          }
2813    }
```

(*End of definition for* __enumext_store_level_open_vii: *and* __enumext_store_level_close_vii:.)

13.30.8   Function for show marks and position

__enumext_print_keyans_box:NN
__enumext_print_keyans_box:cc

The function __enumext_print_keyans_box:NN print a box in the left margin with \l__enumext_mark_-answer_sym_tl used by the wrap-ans, show-ans and show-pos keys. The function takes two arguments:

#1 : \l__enumext_labelwidth_X_dim
#2 : \l__enumext_labelsep_X_dim

```
2814  \cs_new_protected:Nn \__enumext_print_keyans_box:NN
2815    {
2816        \mode_leave_vertical:
2817        \skip_horizontal:n { -\dim_use:N #2 }
2818        \hbox_overlap_left:n
2819          {
2820            \makebox[ \dim_use:N #1 ][ \l__enumext_mark_position_str ]
2821              {
2822                \tl_use:N \l__enumext_mark_answer_sym_tl
2823              }
2824          }
2825        \skip_horizontal:n { \dim_use:N #2 }
2826    }
2827  \cs_generate_variant:Nn \__enumext_print_keyans_box:NN { cc }
```

(*End of definition for* __enumext_print_keyans_box:NN.)

13.31   The internal label and ref

The function __enumext_store_internal_ref: handles the *"internal label and ref"* system used by the save-ref and mark-ref keys for \anskey will allow to execute \ref{⟨*store name* : *position*⟩} and will return 1.(a).i.A.

__enumext_store_internal_ref:

First we will remove the dots "." from the current ⟨*labels*⟩, we do not want to get double dots in our references, then we will place this in the variable \l__enumext_newlabel_arg_two_tl.

```
2828  \cs_new_protected:Nn \__enumext_store_internal_ref:
2829    {
2830        \cs_set_protected:Npn \__enumext_tmp:n ##1
2831          {
2832            \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
2833            \tl_reverse:c { l__enumext_label_copy_##1_tl }
2834            \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
2835            \tl_reverse:c { l__enumext_label_copy_##1_tl }
2836          }
2837        \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
2838        \cs_set:Npn \__enumext_tmp:n ##1
2839          { . \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } }
```

Here we need to analyse the cases where the environment is started with enumext* and if \anskey or anskey* is running alone in it or if it is running in a nested enumext environment within the starting environment.

```
2840        \bool_lazy_all:nT
2841          {
2842            { \bool_if_p:N \g__enumext_starred_bool }
2843            { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2844          }
2845          {
2846            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2847              { \tl_use:N \l__enumext_label_copy_vii_tl }
2848          }
2849        \bool_lazy_all:nT
2850          {
2851            { \bool_not_p:n { \g__enumext_standar_bool } }
2852            { \bool_if_p:N \l__enumext_standar_bool }
2853            { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2854          }
2855          {
2856            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2857              {
2858                \tl_use:N \l__enumext_label_copy_vii_tl
2859                \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2860              }
2861          }
```

If started with enumext and if \anskey or anskey* is running alone in it or if it is running in a nested enumext* environment within the starting environment.

```
2862        \bool_lazy_all:nT
2863          {
2864            { \bool_if_p:N \g__enumext_standar_bool }
2865            { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2866            { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2867          }
2868          {
2869            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2870              {
2871                \tl_use:N \l__enumext_label_copy_i_tl
2872                \int_step_function:nnN { 2 } { \l__enumext_level_int } \__enumext_tmp:n
2873              }
2874          }
2875        \cs_set:Npn \__enumext_tmp:n ##1
2876          { \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
2877        \bool_lazy_all:nT
2878          {
2879            { \bool_if_p:N \g__enumext_standar_bool }
2880            { \bool_if_p:N \l__enumext_starred_bool }
2881            { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2882          }
2883          {
2884            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2885              {
2886                \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2887                \tl_use:N \l__enumext_label_copy_vii_tl
2888              }
2889          }
```

Now we set the variable \l__enumext_newlabel_arg_one_tl which will contain {⟨store name : position⟩}.

```
2890        \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
2891          {
2892            \l__enumext_store_name_tl \c_colon_str
2893            \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
2894          }
```

Now execute the function __enumext_newlabel:nn and save the result in the variable \l__enumext_-write_aux_file_tl and finally we write in the .aux file.

```
2895        \tl_put_right:Ne \l__enumext_write_aux_file_tl
2896          {
2897            \__enumext_newlabel:nn
2898              { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2899              { \l__enumext_newlabel_arg_two_tl }
2900          }
2901        \l__enumext_write_aux_file_tl
```

```
2902        }
```

(*End of definition for* __enumext_store_internal_ref:.)

13.32 Common functions for \anskey **and anskey* environment**

__enumext_store_anskey_arg:n

The internal function __enumext_store_anskey_arg:n first we pass the {⟨*argument*⟩} to the *prop list*, then checks the state of the variable \l__enumext_store_ref_key_bool handled by the save-ref key and will call the function __enumext_store_internal_ref: for the *"internal label and ref"* system. Followed by this if the show-ans or show-pos keys are active we will show the *"wrapped"* {⟨*argument*⟩}.

```
2903  \cs_new_protected:Npn \__enumext_store_anskey_arg:n #1
2904    {
2905      \int_gincr:N \g__enumext_item_anskey_int
2906      \__enumext_store_addto_prop:n {#1}
2907      \bool_if:NT \l__enumext_store_ref_key_bool
2908        {
2909          \__enumext_store_internal_ref:
2910        }
2911      \__enumext_anskey_show_wrap_left:n { #1 }
```

Now we start processing the [⟨*key = val*⟩] passed to the command to build our \item in the variable \l__enumext_store_anskey_arg_tl which we will *"store"* in the *sequence*. First we clear the variable \l__enumext_store_anskey_arg_tl and process the ⟨*keys*⟩, if the break-col key is present and the command is running under enumext (not in enumext*) we will add \columnbreak and then \item.

```
2912      \tl_clear:N \l__enumext_store_anskey_arg_tl
2913      \bool_lazy_and:nnT
2914        { \bool_if_p:N \l__enumext_store_columns_break_bool }
2915        { \bool_not_p:n { \l__enumext_starred_bool } }
2916        {
2917          \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
2918        }
2919      \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

If the item-join key is present and the command is running under enumext* we will add (⟨*number*⟩) to \l__enumext_store_anskey_arg_tl.

```
2920      \bool_lazy_and:nnT
2921        { \bool_not_p:n { \l__enumext_starred_bool } }
2922        { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
2923        {
2924          \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2925            {
2926              ( \exp_not:V \l__enumext_store_item_join_int )
2927            }
2928        }
```

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l__enumext_-store_anskey_arg_tl along with the {⟨*argument*⟩} for \anskey or ⟨*body*⟩ for anskey*.

```
2929      \bool_if:NTF \l__enumext_store_item_star_bool
2930        {
2931          \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
2932          \tl_if_empty:NF \l__enumext_store_item_symbol_tl
2933            {
2934              \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2935                {
2936                  [ \exp_not:V \l__enumext_store_item_symbol_tl ]
2937                }
2938            }
2939          \dim_compare:nT
2940            {
2941              \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
2942            }
2943            {
2944              \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2945                {
2946                  [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
2947                }
2948            }
2949          \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2950        }
2951        {
2952          \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2953        }
```

Finally we check if the `save-ref` key are active along with the `hyperref` package load, if both conditions are met, it will create the `\hyperlink` with *"symbol"* set by `mark-ref` key and then store in *sequence*.

```
2954      \bool_lazy_and:nnT
2955        { \bool_if_p:N \l__enumext_store_ref_key_bool }
2956        { \bool_if_p:N \l__enumext_hyperref_bool }
2957        {
2958          \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2959            {
2960              \hfill \exp_not:N \hyperlink { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2961                  { \exp_not:V \l__enumext_mark_ref_sym_tl }
2962            }
2963        }
2964      \__enumext_store_addto_seq:V \l__enumext_store_anskey_arg_tl
2965    }
```

(*End of definition for* `\__enumext_store_anskey_arg:n`.)

`\__enumext_anskey_show_wrap_arg:n` The function `\__enumext_anskey_show_wrap_arg:n` *"wraps"* the {⟨*argument*⟩} passed to `\anskey` and the ⟨*body*⟩ for `anskey*` when using the `wrap-ans` and `wrap-sep` keys.

```
2966  \cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1
2967    {
2968      \par
2969      \bool_if:NTF \l__enumext_starred_bool
2970        {
2971          \dim_compare:nNnT { \l__enumext_mark_sym_sep_dim } = { \c_zero_dim }
2972            {
2973              \dim_set:Nn \l__enumext_mark_sym_sep_dim { \l__enumext_labelsep_vii_dim }
2974            }
2975          \__enumext_print_keyans_box:NN
2976            \l__enumext_labelwidth_vii_dim \l__enumext_mark_sym_sep_dim
2977        }
2978        {
2979          \dim_compare:nNnT { \l__enumext_mark_sym_sep_dim } = { \c_zero_dim }
2980            {
2981              \dim_set:Nn \l__enumext_mark_sym_sep_dim
2982                {
2983                  \dim_use:c {l__enumext_labelsep_ \__enumext_level: _dim }
2984                }
2985            }
2986          \__enumext_print_keyans_box:cc
2987            { l__enumext_labelwidth_ \__enumext_level: _dim } { l__enumext_mark_sym_sep_dim }
2988        }
2989      \__enumext_anskey_wrapper:n { #1 }
2990    }
```

(*End of definition for* `\__enumext_anskey_show_wrap_arg:n`.)

`\__enumext_anskey_show_wrap_left:n` The function `\__enumext_anskey_show_wrap_left:n` will show the *"mark"* defined by the `mark-ans` key or the *"position"* of the {⟨*content*⟩} stored in the *prop list* when using the `show-pos` key on the left margin next to the *"wraps"* {⟨*argument*⟩} passed to `\anskey` and the ⟨*body*⟩ in `anskey*` on the right side when using the `show-ans` key.

```
2991  \cs_new_protected:Npn \__enumext_anskey_show_wrap_left:n #1
2992    {
2993      \bool_if:NT \l__enumext_show_answer_bool
2994        {
2995          \__enumext_anskey_show_wrap_arg:n { #1 }
2996        }
2997      \bool_if:NT \l__enumext_show_position_bool
2998        {
2999          \tl_set:Ne \l__enumext_mark_answer_sym_tl
3000            {
3001              \group_begin:
3002              \exp_not:N \normalfont
3003              \exp_not:N \footnotesize [ \int_eval:n
3004                {
3005                  \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop }
3006                }
3007              ]
3008              \group_end:
3009            }
```

```
3010              \__enumext_anskey_show_wrap_arg:n { #1 }
3011            }
3012      }
```

(*End of definition for* __enumext_anskey_show_wrap_left:n.)

13.33   The command \anskey

Since we will be *"storing content"* in a `list` environment within *sequences* and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over \item when storing.

The \anskey command will cover this point and give it similar behaviour to that of \item in the enumext and enumext* environments executed as follows \anskey[⟨*key = val*⟩]{⟨*content*⟩}.

First we'll add the keys `break-col`, `item-join`, `item-star`, `item-sym*` and `item-pos*`.

break-col
item-join
item-star
item-sym*
item-pos*
unknown
__enumext_anskey_unknown:n
__enumext_anskey_unknown:nn

```
3013 \keys_define:nn { enumext / anskey }
3014    {
3015      break-col .bool_set:N = \l__enumext_store_columns_break_bool,
3016      break-col .default:n  = true,
3017      break-col .value_forbidden:n = true,
3018      item-join .int_set:N  = \l__enumext_store_item_join_int,
3019      item-join .value_required:n = true,
3020      item-star .bool_set:N = \l__enumext_store_item_star_bool,
3021      item-star .default:n  = true,
3022      item-star .value_forbidden:n = true,
3023      item-sym* .tl_set:N   = \l__enumext_store_item_symbol_tl,
3024      item-sym* .value_required:n = true,
3025      item-pos* .dim_set:N  = \l__enumext_store_item_symbol_sep_dim,
3026      item-pos* .value_required:n = true,
3027      unknown   .code:n     = { \__enumext_anskey_unknown:n {#1} },
3028    }
```

The ⟨*keys*⟩ are stored in \l_keys_key_str and the value (if any) is passed as an argument to the function __enumext_anskey_unknown:n.

```
3029 \cs_new_protected:Npn \__enumext_anskey_unknown:n #1
3030    {
3031      \exp_args:NV \__enumext_anskey_unknown:nn \l_keys_key_str {#1}
3032    }
3033 \cs_new_protected:Npn \__enumext_anskey_unknown:nn #1 #2
3034    {
3035      \tl_if_blank:nTF {#2}
3036        {
3037          \msg_error:nnn { enumext } { anskey-cmd-key-unknown } {#1}
3038        }
3039        {
3040          \msg_error:nnnn { enumext } { anskey-cmd-key-value-unknown } {#1} {#2}
3041        }
3042    }
```

(*End of definition for* break-col *and others.*)

💣 The \anskey command will only be present when using the save-ans key in enumext and enumext* environments, otherwise it will return an error.

\anskey   We will first call the function __enumext_anskey_safe_outer: to be sure where we execute the command, then we will check the state of the variable \l__enumext_check_answers_bool set by the key no-store, if is true we will increment \g__enumext_item_anskey_int for the internal *"check answer"* system and execute the function __enumext_anskey_safe_inner:n to ensure that the command is not nested and that the argument is not empty, finally search the [⟨*key = val*⟩] and call the function __enumext_store_-anskey_arg:n.

```
3043 \NewDocumentCommand \anskey { o +m }
3044    {
3045      \__enumext_anskey_safe_outer:
3046      \group_begin:
3047        \bool_if:NT \l__enumext_check_answers_bool
3048          {
3049            \tl_if_novalue:nF {#1}
3050              {
3051                \keys_set:nn { enumext / anskey } {#1}
3052              }
3053            \tl_if_blank:nTF {#2}
3054              {
3055                \msg_error:nn { enumext } { anskey-empty-arg }
```

```
3056                    }
3057                  {
3058                    \__enumext_anskey_safe_inner:
3059                    \__enumext_store_anskey_arg:n {#2}
3060                  }
3061              }
3062          \group_end:
3063      }
```

(*End of definition for* \anskey. *This function is documented on page* 14.)

13.33.1 Internal functions for the command

__enumext_anskey_safe_outer:
__enumext_anskey_safe_inner:

The __enumext_store_anskey_safe_outer: function will return the appropriate messages when the command is executed outside the environment in which the save-ans key was activated.

```
3064  \cs_new_protected:Nn \__enumext_anskey_safe_outer:
3065    {
3066      \bool_if:NF \l__enumext_store_active_bool
3067        {
3068          \msg_error:nnnn { enumext } { anskey-wrong-place }{ anskey }{ enumext }
3069        }
3070      \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3071        {
3072          \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans }
3073        }
3074      \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
3075        {
3076          \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans* }
3077        }
3078      \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3079        {
3080          \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyanspic }
3081        }
3082    }
```

The __enumext_anskey_safe_inner: function will first check if the command is nested, if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

```
3083  \cs_new_protected:Nn \__enumext_anskey_safe_inner:
3084    {
3085      \int_incr:N \l__enumext_anskey_level_int
3086      \int_compare:nNnT { \l__enumext_anskey_level_int } > { 1 }
3087        {
3088          \msg_error:nn { enumext } { anskey-nested }
3089        }
3090      \bool_if:NF \l__enumext_item_number_bool
3091        {
3092          \msg_error:nn { enumext } { anskey-unnumber-item }
3093        }
3094      \mode_if_math:T
3095        {
3096          \msg_error:nne { enumext } { anskey-math-mode } { \c_backslash_str anskey }
3097        }
3098    }
```

(*End of definition for* __enumext_anskey_safe_outer: *and* __enumext_anskey_safe_inner:.)

13.34 The environment anskey*

The original implementation of the anskey* environment used non-public functions from the scontents[4] package, which was not the best approach. Fortunately LaTeX release 2025-06-01 implemented the new c-type argument in the ltcmd[13], with which we can record the ⟨body⟩ of the environment in *verbatim mode* and, together with \scantokens do the work as the original implementation.

break-col
item-join
item-star
item-sym*
item-pos*
force-eol
write-env
overwrite
unknown

First we add the same keys from the \anskey command along with the force-eol, write-env and overwrite keys that were in the original implementation that used the scontents support package for these.

```
3099  \keys_define:nn { enumext / anskey* }
3100    {
3101      break-col .bool_set:N = \l__enumext_store_columns_break_bool,
3102      break-col .default:n  = true,
3103      break-col .value_forbidden:n = true,
3104      item-join .int_set:N  = \l__enumext_store_item_join_int,
3105      item-join .value_required:n = true,
```

```
3106        item-star .bool_set:N = \l__enumext_store_item_star_bool,
3107        item-star .default:n  = true,
3108        item-star .value_forbidden:n = true,
3109        item-sym* .tl_set:N   = \l__enumext_store_item_symbol_tl,
3110        item-sym* .value_required:n = true,
3111        item-pos* .dim_set:N  = \l__enumext_store_item_symbol_sep_dim,
3112        item-pos* .value_required:n = true,
3113        force-eol .bool_set:N = \l__enumext_anskey_env_force_eol_bool,
3114        force-eol .initial:n  = false,
3115        force-eol .default:n  = true,
3116        write-env .code:n     = {
3117                                 \bool_set_true:N \l__enumext_write_anskey_env_bool
3118                                 \tl_set:Nn \l__enumext_write_anskey_env_file_name_tl {#1}
3119                              },
3120        write-env .value_required:n = true,
3121        overwrite .bool_set:N = \l__enumext_anskey_env_overwrite_bool,
3122        overwrite .initial:n  = false,
3123        overwrite .default:n  = true,
3124        unknown   .code:n     = { \__enumext_anskey_env_unknown:n {#1} },
3125      }
```

(*End of definition for* break-col *and others.*)

__enumext_anskey_env_unknown:n
__enumext_anskey_env_unknown:nn

The ⟨*keys*⟩ are stored in \l_keys_key_str and the value (if any) is passed as an argument to the function __enumext_anskey_env_unknown:n.

```
3126 \cs_new_protected:Npn \__enumext_anskey_env_unknown:n #1
3127   {
3128     \exp_args:NV \__enumext_anskey_env_unknown:nn \l_keys_key_str {#1}
3129   }
3130 \cs_new_protected:Npn \__enumext_anskey_env_unknown:nn #1#2
3131   {
3132     \tl_if_blank:nTF {#2}
3133       {
3134         \msg_error:nnn { enumext } { anskey-env-key-unknown } {#1}
3135       }
3136       {
3137         \msg_error:nnnn { enumext } { anskey-env-key-value-unknown } {#1} {#2}
3138       }
3139   }
```

(*End of definition for* __enumext_anskey_env_unknown:n *and* __enumext_anskey_env_unknown:nn.)

__enumext_anskey_env_file_if_writable:n
__enumext_anskey_env_file_if_writable:nT
__enumext_anskey_env_file_if_writable:nF
__enumext_anskey_env_file_if_writable:nTF

The conditional function __enumext_anskey_env_file_if_writable:n used by the write-env and overwrite keys in the anskey* environment to determine whether the output file is written or overwritten.

```
3140 \prg_new_protected_conditional:Npnn \__enumext_anskey_env_file_if_writable:n #1 { T, F, TF }
3141   {
3142     \bool_if:NTF \l__enumext_write_anskey_env_bool
3143       {
3144         \file_if_exist:nTF {#1}
3145           {
3146             \bool_if:NTF \l__enumext_anskey_env_overwrite_bool
3147               {
3148                 \msg_warning:nne { enumext } { overwrite-file } {#1}
3149                 \prg_return_true:
3150               }
3151               {
3152                 \msg_warning:nne { enumext } { not-writing } {#1}
3153                 \prg_return_false:
3154               }
3155           }
3156           {
3157             \msg_warning:nne { enumext } { writing-file } {#1}
3158             \prg_return_true:
3159           }
3160       }
3161       { \prg_return_false: }
3162   }
```

The __enumext_anskey_env_file_write:nn function is used by the write-env key in the anskey* environment to write the output file with the ⟨*body*⟩ of the environment.

```
3163 \cs_new_protected:Npn \__enumext_anskey_env_file_write:nn #1#2
```

```
3164     {
3165       \__enumext_anskey_env_file_if_writable:nT {#1}

3168           \iow_now:Nn  \l__enumext_write_anskey_env_file_iow {#2}
3169           \iow_close:N \l__enumext_write_anskey_env_file_iow
3170         }
3171     }
3172   \cs_generate_variant:Nn \__enumext_anskey_env_file_write:nn { VV }
```

(*End of definition for* __enumext_anskey_env_file_if_writable:n *and others.*)

anskey* First, we'll call the function __enumext_anskey_env_safe_outer: to make sure where we're running the environment, then, we'll check the state of the variable \l__enumext_check_answers_bool set by the key no-store. If it's true, we'll look for [⟨*key = val*⟩] and verify that the *argument* c ⟨*body*⟩ is not empty. Finally, we'll run the internal check function __enumext_anskey_env_safe_inner:n and call the function __enumext_store_anskey_arg:n.

```
3173   \NewDocumentEnvironment{anskey*}{ o c }
3174     {
3175       \__enumext_anskey_env_safe_outer:
3176       \bool_if:NT \l__enumext_check_answers_bool
3177         {
3178           \tl_if_novalue:nF {#1}
3179             {
3180               \keys_set:nn { enumext / anskey* } {#1}
3181             }
3182           \tl_if_blank:nTF {#2}
3183             {
3184               \msg_error:nn { enumext } { anskey-empty-arg }
3185             }
3186             {
3187               \__enumext_anskey_env_safe_inner:
3188               \__enumext_store_anskey_env:n {#2}
3189             }
3190         }
3191     } { }
```

(*End of definition for* anskey*. *This function is documented on page* 15.)

13.34.1 Internal functions for the environment

__enumext_anskey_env_safe_outer:
__enumext_anskey_env_safe_inner:
__enumext_store_anskey_env:n

The function __enumext_store_anskey_safe_outer: will return the appropriate messages when anskey* is executed outside the environment in which the save-ans key was activated or within the keyans, keyans* or keyanspic environments.

```
3192   \cs_new_protected:Nn \__enumext_anskey_env_safe_outer:
3193     {
3194       \bool_if:NF \l__enumext_store_active_bool
3195         {
3196           \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
3197         }
3198       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3199         {
3200           \msg_error:nnn { enumext } { anskey-env-wrong }{ keyans }
3201         }
3202       \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
3203         {
3204           \msg_error:nnn { enumext } { anskey-env-wrong } { keyans* }
3205         }
3206       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3207         {
3208           \msg_error:nnn { enumext } { anskey-env-wrong } { keyanspic }
3209         }
3210     }
```

The function __enumext_anskey_env_safe_inner: will first check if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

```
3211   \cs_new_protected:Nn \__enumext_anskey_env_safe_inner:
3212     {
3213       \bool_if:NF \l__enumext_item_number_bool
3214         {
3215           \msg_error:nn { enumext } { anskey-unnumber-item }
3216         }
```

```
3217        \mode_if_math:T
3218          {
3219            \msg_error:nnn { enumext } { anskey-math-mode } { anskey* }
3220          }
3221      }
```

The `\__enumext_store_anskey_env:n` function will first pass the argument c ⟨*body*⟩ to the variable `\l__enumext_store_anskey_env_tl` and replace the macro `\obeyedline` with `^^J` and then execute the write-env and overwrite keys, check the state of the variable `\l__enumext_anskey_env_force_eol_-bool` managed by the force-eol key and we will add `\c__enumext_anskey_env_hidden_space_str` if necessary. Finally we will use `\exp_args:Ne` on the `\__enumext_store_anskey_arg:n` to expand the `\__enumext_scan_tokens:n` function which rescans the `\l__enumext_store_anskey_env_tl` variable before processing it.

```
3222  \cs_new_protected:Npn \__enumext_store_anskey_env:n #1
3223    {
3224      \tl_set:Nn \l__enumext_store_anskey_env_tl {#1}
3225      \RenewDocumentCommand \obeyedline { } { \iow_char:N \^^J }
3226      \tl_replace_all:Nee \l__enumext_store_anskey_env_tl { \obeyedline } { \iow_char:N \^^J }
3227      \__enumext_anskey_env_file_write:VV
3228        \l__enumext_write_anskey_env_file_name_tl \l__enumext_store_anskey_env_tl
3229      \bool_if:NF \l__enumext_anskey_env_force_eol_bool
3230        {
3231          \tl_put_right:Ne \l__enumext_store_anskey_env_tl
3232            {
3233              \c__enumext_anskey_env_hidden_space_str
3234            }
3235        }
3236      \exp_args:Ne
3237        \__enumext_store_anskey_arg:n
3238        {
3239          \__enumext_scan_tokens:n { \l__enumext_store_anskey_env_tl }
3240        }
3241    }
```

🌶 Since `\obeyedline` can be redefined by the user, for example to `\mbox{}\par`, it is necessary to redefine it to `^^J` in order to use `\tl_replace_all:Nee` otherwise it returns an error.

(*End of definition for* `\__enumext_anskey_env_safe_outer:` , `\__enumext_anskey_env_safe_inner:` , *and* `\__enumext_store_-anskey_env:n`.)

13.35 Executing check-ans system and write .log

`\__enumext_execute_after_env:` The `\__enumext_execute_after_env:` function will first return the appropriate message for the end of the environment in which the save-ans key is being executed, then call the `\__enumext_item_answer_diff:` function and then will write the values of the global variables used to the .log file. If the key check-ans is active it will execute the function `\__enumext_check_ans_show:` and show the result in the terminal, otherwise it will execute the function `\__enumext_check_ans_log:` and write the results in the .log file and finally we execute the function `\__enumext_reset_global_vars:` returning the used variables to their original state.

```
3242  \cs_new_protected:Nn \__enumext_execute_after_env:
3243    {
3244      \int_compare:nNnT { \l__enumext_level_int } = { 0 }
3245        {
3246          \tl_if_empty:NF \g__enumext_store_name_tl
3247            {
3248              \__enumext_stop_save_ans_msg:
3249              \__enumext_item_answer_diff:
3250              \__enumext_log_global_vars:
3251              \__enumext_log_answer_vars:
3252              \bool_if:NTF \g__enumext_check_ans_key_bool
3253                {
3254                  \__enumext_check_ans_show:
3255                }
3256                { \__enumext_check_ans_log: }
3257            }
3258          \__enumext_reset_global_vars:
3259        }
3260    }
```

🌶 This function is passed to the function `\__enumext_after_env:nn` for the environments enumext (§13.42) and enumext* (§13.47) and it is executed only when the environments are not nested or at some level of these..

(*End of definition for* `\__enumext_execute_after_env:`.)

13.36 Common functions for keyans, keyans* and keyanspic

13.36.1 Storing content in prop list

__enumext_keyans_addto_prop:n

The function __enumext_keyans_addto_prop:n will pass the the current ⟨*label*⟩ for \item* in keyans environment and the current ⟨*label*⟩ for \anspic* in keyanspic environment followed by the ⟨*contents*⟩ of the *optional argument* of both commands to the \l__enumext_store_current_label_tl variable, which will be stored to the *prop list* defined by the save-ans key using the function __enumext_store_addto_-prop:V.

```
3261  \cs_new_protected:Npn \__enumext_keyans_addto_prop:n #1
3262    {
3263      \tl_clear:N \l__enumext_store_current_label_tl
3264      \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
3265        {
3266          \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_vi_tl }
3267        }
3268        {
3269          \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_v_tl }
3270        }
```

If the *optional argument* is present and the save-sep key is not empty, we save it.

```
3271      \tl_if_novalue:nF { #1 }
3272        {
3273          \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_v_tl
3274            {
3275              \tl_put_right:NV \l__enumext_store_current_label_tl \l__enumext_store_keyans_item_opt_
3276            }
3277          \tl_put_right:Nn \l__enumext_store_current_label_tl { #1 }
3278        }
3279      \__enumext_store_addto_prop:V \l__enumext_store_current_label_tl
3280    }
```

(*End of definition for* __enumext_keyans_addto_prop:n.)

13.36.2 The save-ref key for keyans, keyans* and keyanspic

The *"internal label and ref"* system for the keyans, keyans* and keyanspic environments has *slight differences* with the one implemented for \anskey basically because in this environments the interest is in the current ⟨*label*⟩ for \item* and \anspic* with the ⟨*contents*⟩ of the *optional argument*. The mechanism defined here will allow to execute \ref{⟨*store name : position*⟩} and will return 1. (A).

__enumext_keyans_store_ref:
__enumext_keyans_store_ref_aux_i:
__enumext_keyans_store_ref_aux_ii:

The function __enumext_keyans_store_ref: handles the *"internal label and ref"* system used by the save-ref key for \item* and \anspic* commands. First we will create copies of the current ⟨*labels*⟩ and remove the dots "." from them, we do not want to get double dots in references.

```
3281  \cs_new_protected:Nn \__enumext_keyans_store_ref:
3282    {
3283      \bool_if:NT \l__enumext_store_ref_key_bool
3284        {
3285          \cs_set_protected:Npn \__enumext_tmp:n ##1
3286            {
3287              \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
3288              \tl_reverse:c { l__enumext_label_copy_##1_tl }
3289              \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
3290              \tl_reverse:c { l__enumext_label_copy_##1_tl }
3291            }
3292          \clist_map_inline:nn { i, v, vi, vii, viii } { \__enumext_tmp:n {##1} }
3293          \__enumext_keyans_store_ref_aux_i:
3294        }
3295    }
```

The auxiliary function __enumext_keyans_store_ref_aux_i: set the variable \l__enumext_newlabel_-arg_one_tl which will contain {⟨*store name : position*⟩} analyzing whether the environment in which they are executed is enumext* or enumext.

```
3296  \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_i:
3297    {
3298      \bool_if:NT \g__enumext_starred_bool
3299        {
3300          \tl_set_eq:NN \l__enumext_label_copy_i_tl \l__enumext_label_copy_vii_tl
3301        }
3302      \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3303        {
3304          \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3305            { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_vi_tl }
```

```
3306        }
3307      \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3308        {
3309          \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3310            { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_v_tl }
3311        }
3312      \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
3313        {
3314          \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3315            { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_viii_tl }
3316        }
3317      \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
3318        {
3319          \l__enumext_store_name_tl \c_colon_str
3320          \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
3321        }
3322      \__enumext_keyans_store_ref_aux_ii:
3323    }
```

Now auxiliary function `\__enumext_keyans_store_ref_aux_ii:` save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```
3324  \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_ii:
3325    {
3326      \tl_put_right:Ne \l__enumext_write_aux_file_tl
3327        {
3328          \__enumext_newlabel:nn
3329            { \exp_not:V \l__enumext_newlabel_arg_one_tl }
3330            { \l__enumext_newlabel_arg_two_tl }
3331        }
3332      \l__enumext_write_aux_file_tl
3333    }
```

(*End of definition for* `\__enumext_keyans_store_ref:`, `\__enumext_keyans_store_ref_aux_i:`, *and* `\__enumext_keyans_-store_ref_aux_ii:`.)

13.36.3   Storing content in sequence

`\__enumext_keyans_addto_seq:n`
`\__enumext_keyans_addto_seq_link:`

The function `\__enumext_keyans_addto_seq:n` will pass the contents of the current ⟨*label*⟩ `\l__enumext_label_v_tl` for the keyans environment and the `\l__enumext_label_vi_tl` for the keyanspic environment when using `\item*` and `\anspic*`, followed by the ⟨*contents*⟩ of the *optional argument* of both commands to the `\l__enumext_store_current_label_tl` variable to the sequence defined by the save-ans key.

```
3334  \cs_new_protected:Npn \__enumext_keyans_addto_seq:n #1
3335    {
3336      \tl_clear:N \l__enumext_store_current_label_tl
3337      \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
3338        {
3339          \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_vi_tl }
3340        }
3341        {
3342          \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_v_tl }
3343        }
3344      \tl_if_novalue:nF { #1 }
3345        {
3346          \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_v_tl
3347            {
3348              \tl_put_right:NV \l__enumext_store_current_label_tl \l__enumext_store_keyans_item_opt_
3349            }
3350          \tl_put_right:Nn \l__enumext_store_current_label_tl { #1 }
3351        }
3352      \__enumext_keyans_addto_seq_link:
3353    }
```

Checks if the save-ref key is active along with the hyperref package load, if both conditions are met, it will create the `\hyperlink` and then store using the `\__enumext_store_addto_seq:V` function. Finally, copy the contents of the variable `\l__enumext_store_current_label_tl` into the global variable `\g__enumext_check_ans_item_tl` to be used by the function `\__enumext_check_starred_cmd:n` and increment the value of the integer variable `\g__enumext_item_anskey_int` handled by the check-ans key.

```
3354  \cs_new_protected:Nn \__enumext_keyans_addto_seq_link:
3355    {
3356      \bool_lazy_and:nnT
```

```

13.37 Redefining `\item` and `\makelabel` in enumext

Redefining the `\item` command is not as simple as I thought. This command works in conjunction with the `\makelabel` command so I have to redefine both of them, in addition to this, we will have to use a couple of *global* variables to pass the values from one command to the other.

When *labeling* PDF is active `\makelabel` is redefined as `\hss #1` and the only way to get the `align` key to work correctly is to redefine `\makelabel` using `\makebox`. The best way to implement this is to use the conditional command `\IfDocumentMetadataTF` to force this redefinition and the dedicated `mode-box` key to manually activate it by the user.

The `\item` and `\item[`⟨*custom*⟩`]` commands work in the usual way on enumext and we will add `\item*`, `\item*[`⟨*symbol*⟩`]` and `\item*[`⟨*symbol*⟩`][`⟨*offset*⟩`]`.

`\__enumext_default_item:n` First we will see if the *optional argument* is present, if it is NOT present we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_-wrap_label_X_bool` to "true" for the key `wrap-label` and execute `\__enumext_item_std:w` and the key `itemindent`, otherwise we will check the state of the boolean variable `\l__enumext_wrap_label_opt_-X_bool` set by the key `wrap-label*` and execute `\__enumext_item_std:w` with the *optional argument* and the key `itemindent`.

```
3482 \cs_new_protected:Npn \__enumext_default_item:n #1
3483   {
3484     \tl_if_novalue:nTF {#1}

3575            }
3576            { ##1 }
3577          \tl_use:c { l__enumext_label_fill_right_ \__enumext_level: _tl }
3578          \tl_gclear:N \g__enumext_item_symbol_aux_tl
3579        }
3580    }
```

Definition using `\makebox` when `\DocumentMetadata` is active or `mode-box` is active.

🏷 Here it is necessary to use `\strut\smash` to maintain text *alignment* in case the user wants to use `\labelbx` for example. In my experiments with *mimicking* the `description` environment it was the only way out and it seems to have no adverse effects and may serve in the future as a basis for a more generic `list` environment package than enumext.

```
3581  \cs_new_protected:Nn \__enumext_make_label_box:
3582    {
3583      \RenewDocumentCommand \makelabel { m }
3584        {
3585          \strut\smash
3586            {
3587              \makebox
3588                [ \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim } ]
3589                [ \str_use:c { l__enumext_align_label_pos_ \__enumext_level: _str } ]
3590                {
3591                  \__enumext_item_starred_exec:
3592                  \tl_use:c { l__enumext_label_font_style_ \__enumext_level: _tl }

13.38 Setting `item-sym*` and `item-pos*` keys

In order to have a cleaner implementation of `\item*` for the enumext and enumext* environments it is best to define a couple of keys that allow us to control and set by default the ⟨*symbol*⟩ and its ⟨*offset*⟩.

item-sym*   Define and set `item-sym*` and `item-pos*` keys for enumext and enumext*.
item-pos*
```
3603  \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
3604    {
3605      \keys_define:nn { enumext / #1 }
3606        {
3607          item-sym* .tl_set:c  = { l__enumext_item_symbol_#2_tl },
3608          item-sym* .value_required:n = true,
3609          item-sym* .initial:n  = {\textborn},
3610          item-pos* .dim_set:c  = { l__enumext_item_symbol_sep_#2_dim },
3611          item-pos* .value_required:n = true,
3612        }
3613    }
3614  \clist_map_inline:nn
3615    {
3616      {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
3617    }
3618    { \__enumext_tmp:nn #1 }
```

(*End of definition for* `item-sym*` *and* `item-pos*`.)

13.39 Handling unknown keys

At this point in the code I already know that I will NOT add more ⟨keys⟩ for and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the ⟨keys⟩ (you have to be consistent in life).

💣 Well, the paragraph above is not so real, after all I had to add more ⟨keys⟩ than I had planned, not everything turns out the way one thinks in life.

13.39.1 Handling unknown keys for keyans, keyans* and keyanspic

unknown
__enumext_keyans_unknown_keys:n
__enumext_keyans_unknown_keys:nn

Define and set unknown key for keyans, keyans* and keyanspic environments. Here it is necessary to set \l__enumext_envir_name_tl in case an unknown key is passed using \setenumext.

```
3619 \cs_set_protected:Npn \__enumext_tmp:n #1
3620   {
3621     \keys_define:nn { enumext / #1 }
3622       {
3623         unknown .code:n = {
3624                     \tl_set:Nn \l__enumext_envir_name_tl {#1}
3625                     \__enumext_keyans_unknown_keys:n {##1}
3626                   },
3627       }
3628   }
3629 \clist_map_inline:nn { keyans, keyans*, keyanspic } { \__enumext_tmp:n {#1} }
```

Internal functions for handling unknown key.

```
3630 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:n #1
3631   {
3632     \exp_args:NV \__enumext_keyans_unknown_keys:nn \l_keys_key_str {#1}
3633   }
3634 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:nn #1#2
3635   {
3636     \tl_if_blank:nTF {#2}
3637       {
3638         \msg_error:nne { enumext } { keyans-unknown-key } {#1}
3639       }
3640       {
3641         \msg_error:nnee { enumext } { keyans-unknown-key-value } {#1} {#2}
3642       }
3643   }
```

(*End of definition for* unknown *,* __enumext_keyans_unknown_keys:n *, and* __enumext_keyans_unknown_keys:nn*.*)

13.39.2 Handling unknown keys for enumext*

unknown
__enumext_starred_unknown_keys:n
__enumext_starred_unknown_keys:nn

Define and set unknown key for enumext* environment.

```
3644 \keys_define:nn { enumext / enumext* }
3645   {
3646     unknown .code:n = {
3647                 \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
3648                 \__enumext_starred_unknown_keys:n {#1}
3649               },
3650   }
```

Internal functions for handling unknown key.

```
3651 \cs_new_protected:Npn \__enumext_starred_unknown_keys:n #1
3652   {
3653     \exp_args:NV \__enumext_starred_unknown_keys:nn \l_keys_key_str {#1}
3654   }
3655 \cs_new_protected:Npn \__enumext_starred_unknown_keys:nn #1#2
3656   {
3657     \tl_if_blank:nTF {#2}
3658       {
3659         \msg_error:nne { enumext } { starred-unknown-key } {#1}
3660       }
3661       {
3662         \msg_error:nnee { enumext } { starred-unknown-key-value } {#1} {#2}
3663       }
3664   }
```

(*End of definition for* unknown *,* __enumext_starred_unknown_keys:n *, and* __enumext_starred_unknown_keys:nn*.*)

13.39.3 Handling unknown keys for enumext

unknown
__enumext_standar_unknown_keys:n
__enumext_standar_unknown_keys:nn

Defines and set the key unknown for enumext environment.

```
3665  \cs_set_protected:Npn \__enumext_tmp:n #1
3666    {
3667      \keys_define:nn { enumext / level-#1 }
3668        {
3669          unknown .code:n = {
3670                            \int_set:Nn \l__enumext_level_int { #1 }
3671                            \tl_set:Nn \l__enumext_envir_name_tl { enumext }
3672                            \__enumext_standar_unknown_keys:n {##1}
3673                          },
3674        }
3675    }
3676  \clist_map_inline:nn {1, 2, 3, 4} { \__enumext_tmp:n {#1} }
```

Internal functions for handling unknown key.

```
3677  \cs_new_protected:Npn \__enumext_standar_unknown_keys:n #1
3678    {
3679      \exp_args:NV \__enumext_standar_unknown_keys:nn \l_keys_key_str {#1}
3680    }
3681  \cs_new_protected:Npn \__enumext_standar_unknown_keys:nn #1#2
3682    {
3683      \tl_if_blank:nTF {#2}
3684        {
3685          \msg_error:nne { enumext } { standar-unknown-key } {#1}
3686        }
3687        {
3688          \msg_error:nnee { enumext } { standar-unknown-key-value } {#1} {#2}
3689        }
3690    }
```

(*End of definition for* unknown *,* __enumext_standar_unknown_keys:n *, and* __enumext_standar_unknown_keys:nn*.*)

13.40 Redefining \item and \makelabel in keyans

The \item and \item[⟨*custom*⟩] commands work in the usual way in keyans, but the \item* and \item*[⟨*content*⟩] commands *store* the current ⟨*label*⟩ next to the ⟨*content*⟩ if it is present in the *sequence* and *prop list* defined by save-ans key.

__enumext_keyans_default_item:n

The function __enumext_keyans_default_item:n executes the original behavior of the \item along with the keys wrap-label, wrap-label* and itemindent.

```
3691  \cs_new_protected:Npn \__enumext_keyans_default_item:n #1
3692    {
3693      \tl_if_novalue:nTF { #1 }
3694        {
3695          \bool_set_true:N \l__enumext_wrap_label_v_bool
3696          \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3697        }
3698        {
3699          \bool_set_eq:NN \l__enumext_wrap_label_v_bool \l__enumext_wrap_label_opt_v_bool
3700          \__enumext_item_std:w [#1] \tl_use:N \l__enumext_fake_item_indent_v_tl
3701        }
3702    }
```

(*End of definition for* __enumext_keyans_default_item:n*.*)

__enumext_keyans_starred_item:n

The function __enumext_keyans_starred_item:n will take as argument #1 the *optional argument* [⟨*content*⟩] passed to \item* and save it via the __enumext_keyans_save_item_opt:n function, then activate the wrap-label key, execute \item using __enumext_item_std:w, the itemindent key and print the *optional argument* using the __enumext_keyans_show_item_opt: function handled by the wrap-opt key.

```
3703  \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
3704    {
3705      \__enumext_keyans_save_item_opt:n { #1 }
3706      \bool_set_true:N \l__enumext_wrap_label_v_bool
3707      \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3708      \__enumext_keyans_show_item_opt:
```

Now *store* the current ⟨*label*⟩ first in the *prop list* (including the *optional argument*), run the internal *"label and ref"* system if the save-ref key is active, then *store* in the *sequence* and finally increments \g__enumext_-check_starred_cmd_int for internal check system.

```
3709      \__enumext_keyans_addto_prop:n { #1 }
```

```
3710        \__enumext_keyans_store_ref:
3711        \__enumext_keyans_addto_seq:n { #1 }
3712        \int_gincr:N \g__enumext_check_starred_cmd_int
3713      }
```

(*End of definition for __enumext_keyans_starred_item:n.*)

\item*
__enumext_keyans_redefine_item:

The function __enumext_keyans_redefine_item: is responsible for adding the *starred argument* and *optional argument* by the __enumext_list_arg_two_v: function in the definition of the keyans environment. Here we will set to true the variable \l__enumext_item_wrap_key_bool used by the wrap-ans* key only when \item* is executed and additionally we need to use \peek_remove_spaces:n to avoid an unwanted space when using \item* together with the itemindent key. This function are passed to __enumext_list_arg_two_v: used in the definition of the keyans environment (§13.41).

```
3714  \cs_new_protected:Nn \__enumext_keyans_redefine_item:
3715    {
3716      \RenewDocumentCommand \item { s o }

3793    }
```

(*End of definition for* `\__enumext_keyans_make_label:` *and others.*)

13.41 Second argument of the lists

At this point in the code we have already programmed most of the tools needed to create a *custom* `list` environment, remember that the `\__enumext_start_list:nn` function takes two arguments, we have the "first" one ready, the "second" one we will define for all levels of the `enumext` environment, the `keyans` environment and the `enumext*` and `keyans*` environments.

Here we will implement the `\__enumext_list_arg_two_X:` function, which will be responsible for setting all the list parameters, the counter, the redefinition of `\item`, `\makelabel` along with the keys `ref`, `itemindent` and `show-length`.

💣 In the functions `\__enumext_list_arg_two_X:` we will implement the *"counter"* for the environments, but we do NOT set the *"start value"* for it to be compatible with *tagged* PDF that should be done later.

13.41.1 Calculation of `\leftmargin` and `\itemindent`

Consider the figure 9 where the default margins (on the left) of a list are represented.
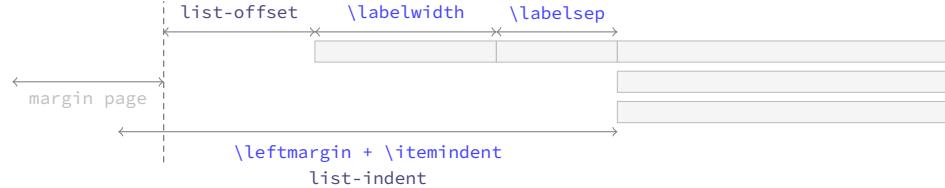

Figure 9: Representation of standard horizontal lengths in `list` environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the *"right edge"* of the `\labelsep` equals the *"right edge"* of the `\itemindent`, so that the left edge of the *"label box"* is at `\leftmargin`+`\itemindent` minus `\labelwidth`+`\labelsep`. Thus, the handling of the margins by the package will be as shown in the figure 10.
Where the default values will look like in the figure 11.

`\__enumext_calc_hspace:NNNNNNN`
`\__enumext_calc_hspace:ccccccc`

The function `\__enumext_calc_hspace:NNNNNNN` takes seven arguments to be able to determine horizontal spaces for all list environment:
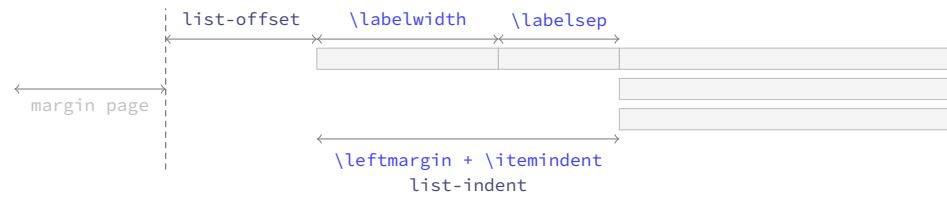

Figure 10: Representation of horizontal lengths concept in list in enumext.
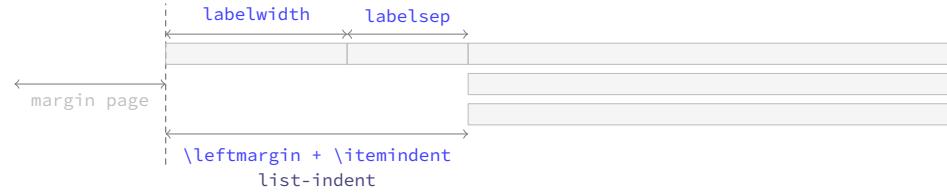

Figure 11: Default horizontal lengths in enumext.

```
#1: \l__enumext_labelwidth_X_dim        #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim        #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim        #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the *"adjusted"* values of `\leftmargin` and `\itemindent`.

```
3794  \cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
3795    {
3796      \dim_compare:nNnT { #1 } < { \c_zero_dim }
3797        {
3798          \msg_warning:nnnV { enumext } { width-non-positive }{ labelwidth }{ #1 }
3799          \dim_set:Nn #1 { \dim_abs:n { #1 } }
3800        }
3801      \dim_compare:nNnT { #2 } < { \c_zero_dim }
3802        {
3803          \msg_warning:nnnV { enumext } { width-negative }{ labelsep }{ #2 }
3804          \dim_set:Nn #2 { \dim_abs:n { #2 } }
3805        }
```

If no value has been passed to the `labelwidth` and `labelsep` keys we set the default values for `\l__enumext_leftmargin_tmp_X_dim`.

```
3806      \bool_if:NF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for `\leftmargin` and `\itemindent`.

```
3807      \dim_compare:nNnTF { #4 } < { \c_zero_dim }
3808        {
3809          \dim_set:Nn #6 { #1 + #2 - #4}
3810          \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3811        }
3812        {
3813          \dim_compare:nNnT { #4 } = { #1 + #2 }
3814            { \dim_set:Nn #6 { \c_zero_dim } }
3815          \dim_compare:nNnT { #4 } < { #1 + #2 }
3816            { \dim_set:Nn #6 { #1 + #2 - #4} }
3817          \dim_compare:nNnT { #4 } > { #1 + #2 }
3818            {
3819              \dim_set:Nn #6 { -#1 - #2 + #4}
3820              \dim_set:Nn #6 { #6*-1}
3821            }
3822          \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3823        }
3824    }
3825  \cs_generate_variant:Nn \__enumext_calc_hspace:NNNNNNN { ccccccc }
```

(*End of definition for* `\__enumext_calc_hspace:NNNNNNN`.)

13.41.2 Setting second argument of the lists

`\__enumext_list_arg_two_i:`
`\__enumext_list_arg_two_ii:`
`\__enumext_list_arg_two_iii:`
`\__enumext_list_arg_two_iv:`
`\__enumext_list_arg_two_v:`

We will "not set" `\leftmargini`, `\leftmarginii`, `\leftmarginiii` or `\leftmarginiv`, in this case, we will directly set the parameters for vertical and horizontal list spacing per level.

```
3826  \cs_set_protected:Npn \__enumext_tmp:n #1
3827    {
3828      \cs_new_protected:cpn { __enumext_list_arg_two_#1: }
```

```

3987                    + \dim_use:c { l__enumext_labelsep_ \__enumext_level: _dim }
3988                  ) / \int_use:c { l__enumext_columns_ \__enumext_level: _int }
3989                  - \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
3990                }
3991            }
3992          \dim_set_eq:Nc \columnsep { l__enumext_columns_sep_ \__enumext_level: _dim  }
3993          \int_compare:nNnT { \l__enumext_level_int } > { 1 }
3994            {
3995              \dim_zero:N \columnseprule
3996            }
```

We will calculate the *vertical spacing* settings for the `multicols` environment using the function `\__enumext_-multi_addvspace:`, apply our *"vertical adjust spacing"*, then start the `multicols` environment.

```
3997        \bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }
3998          {
3999            \skip_zero:N \multicolsep
4000            \__enumext_multi_addvspace:
4001          }
4002        \raggedcolumns
4003        \begin{multicols}{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } }
4004      }
4005    }
```

(*End of definition for* `\__enumext_multicols_start:`.)

`\__enumext_multicols_stop:` The function `\__enumext_multicols_stop:` will stop the `multicols` environment and apply our *"vertical adjust"* spacing. For compatibility with *tagged* PDF, the closing of the `list` environment is executed here along with `\__enumext_stop_store_level:`.

```
4006  \cs_new_protected:Nn \__enumext_multicols_stop:
4007    {
4008      \int_compare:nNnTF
4009        { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
4010        {
4011          \__enumext_stop_list:
4012          \__enumext_stop_store_level:
4013          \end{multicols}
4014          \__enumext_unskip_unkern:
4015          \__enumext_unskip_unkern:
4016          \par\addvspace{ \skip_use:c { l__enumext_multicols_below_ \__enumext_level: _skip } }
4017        }
4018        {
4019          \__enumext_stop_list:
4020          \__enumext_stop_store_level:
4021        }
4022    }
```

(*End of definition for* `\__enumext_multicols_stop:`.)

`\__enumext_before_list:` The function `\__enumext_before_list:` first calls the function `\__enumext_vspace_above:` used by the keys `above` and `above*`, then calls the function `\__enumext_before_args_exec:` used by the key `before*` and finally execute the function `\__enumext_check_ans_active:` for the check answer mechanism.

```
4023  \cs_new_protected:Nn \__enumext_before_list:
4024    {
4025      \__enumext_vspace_above:
4026      \__enumext_before_args_exec:
4027      \__enumext_check_ans_active:
```

When the `mini-env` key is active it will set the value of the `\l__enumext_minipage_right_X_dim` to be the *width* of the `__enumext_mini_page` environment on the *"right side"*, using this value together with the value of the `\l__enumext_minipage_hsep_X_dim` set by the `mini-sep` key, the value of `\l__enumext_-minipage_left_X_dim` will be set, which will be the *width* of `__enumext_mini_page` environment on the *"left side"*, always having a current `\linewidth` as *maximum width* between them.

```
4028      \dim_compare:nNnT
4029        { \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }
4030        {
4031          \dim_set:cn { l__enumext_minipage_left_ \__enumext_level: _dim }
4032            {
4033              \linewidth
4034              - \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim }
4035              - \dim_use:c { l__enumext_minipage_hsep_ \__enumext_level: _dim }
4036            }
```

The boolean variable `\l__enumext_minipage_active_X_bool` will be activated and the integer variable `\g__enumext_minipage_stat_int` used by the `\miniright` command will be incremented, then the function `\__enumext_minipage_add_space:` is called and the `__enumext_mini_page` environment on the *"left side"* will be initialized followed by the *"vertical spacing"* applied to preserve the *"baseline"* between the *left* and *right* side environments. After these actions, the function `\__enumext_multicols_start:` is called to handle the `multicols` environment.

```
4037        \bool_set_true:c { l__enumext_minipage_active_ \__enumext_level: _bool }
4038        \int_gincr:N \g__enumext_minipage_stat_int
4039        \__enumext_minipage_add_space:
```

```
4040          \noindent
4041          \__enumext_mini_page{ \dim_use:c { l__enumext_minipage_left_ \__enumext_level: _dim } }
4042          }
4043       \__enumext_multicols_start:
4044    }
```

(*End of definition for* __enumext_before_list:*.*)

__enumext_second_part: The function __enumext_second_part: first check the state of the boolean variable \l__enumext_-minipage_active_X_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the __enumext_mini_page environment has not been closed), then close __enumext_mini_-page and add the *adjusted vertical space* \l__enumext_minipage_after_skip, otherwise we will close the multicols environment.

```
4045 \cs_new_protected:Nn \__enumext_second_part:
4046    {
4047       \bool_if:cTF { l__enumext_minipage_active_ \__enumext_level: _bool }
4048          {
4049             \int_compare:nNnT { \g__enumext_minipage_stat_int } = { 1 }
4050                {
4051                   \msg_warning:nn { enumext } { missing-miniright }
4052                   \miniright
4053                }
4054             \int_gzero:N \g__enumext_minipage_stat_int
4055             \__enumext_unskip_unkern: % remove topsep + [partopsep]
4056             \end__enumext_mini_page
4057          }
4058          {
4059             \__enumext_multicols_stop:
4060          }
```

Now we will execute the functions __enumext_after_stop_list: used by the key after, __enumext_-check_ans_key_hook: used by the key check-ans, __enumext_vspace_below: used by the keys below and below*. Finally set \l__enumext_standar_bool to false and call the function __enumext_resume_-save_counter: used by the series, resume and resume* keys.

```
4061       \__enumext_after_stop_list:
4062       \__enumext_check_ans_key_hook:
4063       \__enumext_vspace_below:
4064       \bool_set_false:N \l__enumext_standar_bool
4065       \bool_if:NF \l__enumext_print_keyans_cmd_bool
4066          {
4067             \__enumext_standar_save_counter:
4068          }
4069    }
```

(*End of definition for* __enumext_second_part:*.*)

__enumext_set_item_width: The function __enumext_set_item_width: will set the value of \itemwidth taking into account the value established by the list-offset key for each level of the environment.

```
4070 \cs_new_protected:Nn \__enumext_set_item_width:
4071    {
4072       \dim_set:Nn \itemwidth { \linewidth }
4073       \dim_compare:nT
4074          {
4075             \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim } != \c_zero_dim
4076          }
4077          {
4078             \dim_sub:Nn \itemwidth
4079                {
4080                   \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
4081                }
4082          }
4083    }
```

(*End of definition for* __enumext_set_item_width:*.*)

__enumext_start_counter: For compatibility with *tagged* PDF and since we are using legacy code for the implementation, we must set the initial value of the counters after the second argument to the list environment and before the first execution of \item , i.e. \begin{list}{⟨*arg one*⟩}{⟨*arg two*⟩}\setcounter{enumX}.

🌱 This is described in processing order of legacysetupcode in the block templates and we will apply the workaround provided by Frank Mittelbach.

```
4084 \cs_new_protected:Nn \__enumext_start_counter:
4085   {
4086     \setcounter { enumX \__enumext_level: }
4087       {
4088         \int_eval:n { \int_use:c { l__enumext_start_ \__enumext_level: _int } - 1 }
4089       }
4090   }
```

(*End of definition for* __enumext_start_counter:.)

enumext   Now create the enumext environment based on list environment by levels.

```
4091 \NewDocumentEnvironment{enumext}{ O{} }
4092   {
4093     \__enumext_safe_exec:
4094     \__enumext_parse_keys:n {#1}
4095     \__enumext_before_list:
4096     \__enumext_start_store_level:
4097     \__enumext_start_list:nn
4098       { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
4099       {
4100         \use:c { __enumext_list_arg_two_ \__enumext_level: : }
4101         \__enumext_before_keys_exec:
4102       }
4103     \__enumext_start_counter:
4104     \__enumext_set_item_width:
4105     \__enumext_after_args_exec:
4106   }
4107   {
4108     \__enumext_second_part:
4109   }
```

(*End of definition for* enumext. *This function is documented on page* 5.)

As we don't want our check to be executed check-ans by levels but on the complete list, we will take it out of the enumext environment using the *"hook"* function __enumext_after_env:nn.

```
4110 \__enumext_after_env:nn {enumext}
4111   {
4112     \__enumext_execute_after_env:
4113   }
```

13.43   The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for *"multiple choice questions"*.

__enumext_keyans_safe_exec: The keyans environment will only be available if the save-ans key is active and can only be used at the *"first level"* within the enumext environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```
4114 \cs_new_protected:Nn \__enumext_keyans_safe_exec:
4115   {
4116     \bool_if:NF \l__enumext_store_active_bool
4117       {
4118         \msg_error:nnnn { enumext } { wrong-place }{ keyans }{ save-ans }
4119       }
4120     \int_incr:N \l__enumext_keyans_level_int
4121     \bool_set_true:N \l__enumext_keyans_env_bool
4122     \__enumext_keyans_name_and_start:
4123     % Set false for interfering with enumext nested in keyans (yes, its possible and crayze)
4124     \bool_set_false:N \l__enumext_store_active_bool
4125     \int_compare:nNnT { \l__enumext_keyans_level_int } > { 1 }
4126       {
4127         \msg_error:nn { enumext } { keyans-nested }
4128       }
4129     \int_compare:nNnT { \l__enumext_level_int } > { 1 }
4130       {
4131         \msg_error:nn { enumext } { keyans-wrong-level }
4132       }
4133   }
```

(*End of definition for* __enumext_keyans_safe_exec:.)

__enumext_keyans_parse_keys:n

Parse [⟨*key* = *val*⟩] for keyans environment.

```
4134  \cs_new_protected:Npn \__enumext_keyans_parse_keys:n #1
4135    {
4136      \keys_set:nn { enumext / keyans } {#1}
4137    }
```

(*End of definition for* __enumext_keyans_parse_keys:n.)

4248    }
```

(*End of definition for* keyans. *This function is documented on page 16.*)

13.44 Tagging PDF support for non-standart list environments

The LaTeX release 2022-06-01 brings automatic support for *tagged* PDF in several aspects, including the standard *list environments* and the `list` environment. Unfortunately non-standard *list environments* like `keyanspic` or the horizontal list environments `enumext*` and `keyans*` are not structured in a nice way, i.e. the expected result in the PDF file is the expected one, but the underlying structure is not correct. In simple terms, for *tagged* PDF a `list` environment is a `list` environment, no matter what it looks like in the PDF file.

To maintain a correct `list` structure when `\DocumentMetadata` is active, it is necessary to do some things manually using `tagpdf`[18] and `ltsockets`[20]. This implementation is an adaptation of my answer thanks to Ulrike Fischer's comments in How can I modify my `\item` redefinition to be compatible with `tagging-pdf`.

13.44.1 Socket for tagging support in enumext* and keyans*

start-list-tags
stop-start-tags
stop-list-tags
__enumext_start_list_tag:n
__enumext_stop_start_list_tag:
__enumext_stop_list_tag:n

We will first define the necessary `sockets` and their behavior for `enumext*` and `keyans*`.

```
4249 \socket_new:nn {tagsupport/__enumext/starred}{ 1 }
4250 \socket_new_plug:nnn {tagsupport/__enumext/starred} {start-list-tags}
4251   {
4252     \tag_resume:n {#1}
4253     \tag_mc_end_push:
4254       \tag_struct_begin:n {tag=LI}
4255         \tag_struct_begin:n {tag=Lbl}
4256           \tag_mc_begin:n {tag=Lbl}
4257   }
4258 \socket_new_plug:nnn {tagsupport/__enumext/starred} {stop-start-tags}
4259   {
4260           \tag_mc_end:
4261         \tag_struct_end:n {tag=Lbl}
4262         \tag_struct_begin:n {tag=LBody}
4263           \tag_struct_begin:n {tag=text-unit}
4264             \tag_struct_begin:n {tag=text}
4265   }
4266 \socket_new_plug:nnn {tagsupport/__enumext/starred} {stop-list-tags}
4267   {
4268           \tag_struct_end:n {tag=text}
4269         \tag_struct_end:n {tag=text-unit}
4270       \tag_struct_end:n {tag=LBody}
4271     \tag_struct_end:n {tag=LI}
4272   \tag_mc_begin_pop:n {}
4273   \tag_suspend:n {#1}
4274   }
```

And now we'll wrap them so that they're only active when `\DocumentMetadata` is present.

```
4275 \cs_new_protected_nopar:Npn \__enumext_start_list_tag:n #1
4276   {
4277     \IfDocumentMetadataT
4278       {
4279         \socket_assign_plug:nn {tagsupport/__enumext/starred} {start-list-tags}
4280         \socket_use:nn {tagsupport/__enumext/starred} {#1}
4281       }
4282   }
4283 \cs_new_protected_nopar:Nn \__enumext_stop_start_list_tag:
4284   {
4285     \IfDocumentMetadataT
4286       {
4287         \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-start-tags}
4288         \socket_use:nn {tagsupport/__enumext/starred} { }
4289       }
4290   }
4291 \cs_new_protected_nopar:Npn \__enumext_stop_list_tag:n #1
4292   {
4293     \IfDocumentMetadataT
4294       {
4295         \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-list-tags}
4296         \socket_use:nn {tagsupport/__enumext/starred} {#1}
4297       }
4298   }
```

(*End of definition for* start-list-tags *and others.*)

13.44.2 Socket for tagging support in `keyanspic`

We will first define the necessary sockets and their behavior for `keyanspic` environment.

```
4299 \socket_new:nn {tagsupport/__enumext/keyanspic}{ 0 }
4300 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {start-list-tags}
4301   {
4302     \tag_resume:n {keyanspic}
4303     \tag_mc_end_push:
4304       \tag_struct_begin:n {tag=LI}
4305         \tag_struct_begin:n {tag=Lbl}
4306           \tag_mc_begin:n {tag=Lbl}
4307   }
4308 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {stop-start-tags}
4309   {
4310           \tag_mc_end:
4311         \tag_struct_end:n {tag=Lbl}
4312         \tag_struct_begin:n {tag=LBody}
4313           \tag_struct_begin:n {tag=text-unit}
4314             \tag_struct_begin:n {tag=text}
4315               \tag_mc_begin:n {tag=text}
4316   }
4317 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {stop-list-tags}
4318   {
4319               \tag_mc_end:
4320             \tag_struct_end:n {tag=text}
4321           \tag_struct_end:n {tag=text-unit}
4322         \tag_struct_end:n {tag=LBody}
4323       \tag_struct_end:n {tag=LI}
4324     \tag_mc_begin_pop:n {}
4325     \tag_suspend:n {keyanspic}
4326   }
```

And now we'll wrap them so that they're only active when `\DocumentMetadata` is present.

```
4327 \cs_new_protected_nopar:Nn \__enumext_anspic_start_list_tag:
4328   {
4329     \IfDocumentMetadataT
4330       {
4331         \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {start-list-tags}
4332         \socket_use:n {tagsupport/__enumext/keyanspic}
4333       }
4334   }
4335 \cs_new_protected_nopar:Nn \__enumext_anspic_stop_start_list_tag:
4336   {
4337     \IfDocumentMetadataT
4338       {
4339         \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {stop-start-tags}
4340         \socket_use:n {tagsupport/__enumext/keyanspic}
4341       }
4342   }
4343 \cs_new_protected_nopar:Nn \__enumext_anspic_stop_list_tag:
4344   {
4345     \IfDocumentMetadataT
4346       {
4347         \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {stop-list-tags}
4348         \socket_use:n {tagsupport/__enumext/keyanspic}
4349       }
4350   }
```

(*End of definition for* `start-list-tags` *and others.*)

13.45 The environment `keyanspic` and `\anspic`

The `keyanspic` environment is a `list` based environment that uses the same configuration for *"spacing"* and ⟨*label*⟩ as the `keyans` environment, but it does not use `\item`. The ⟨*contents*⟩ are passed to the environment by means of the `\anspic` command as replacement for `\item` command and placed inside `minipage` environments, with the ⟨*label*⟩ centered *"above"* or *"below"*, adjusting *widths* and *position* according to the options passed to the environment.

In order for the `keyanspic` environment and the `\anspic` command to work correctly, we need to set and export some variables in the first part of the environment definition and pass them to `\anspic` which is executed in the second part of the environment. This implementation is adapted from the answer given by Enrico Gregorio (@egreg) in How to process the body of an environment and divide it by a \macro?.
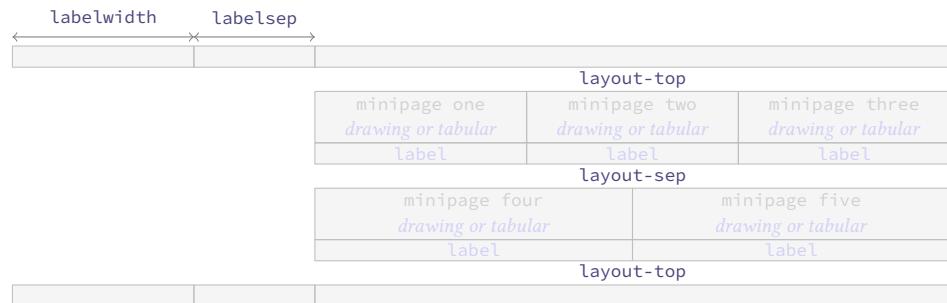

Figure 12: Representation of the keyanspic spacing in enumext.

13.45.1 The environment keyanspic

First we define the key that allows us to process the position of the ⟨label⟩ centered "above" or "below" which will be label-pos, the vertical separation of these from *drawing or tabular* will be handled with the key label-sep. The *"layout style"* will be handled with the key layout-sty will take two values separated by comma {⟨n° upper, n° lower⟩} and will determine the number of minipage environments in which all arguments of \anspic will be printed at the "upper" and "lower" within the environments separated by the value of the key layout-sep. The vertical space "top" and "bottom" of the environment will be handled with the key layout-top.

```
4351 \keys_define:nn { enumext / keyanspic }
4352   {
4353     label-pos .choice:,
4354     label-pos / above   .code:n =
4355                                \bool_set_true:N \l__enumext_anspic_label_above_bool
4356                                \str_set:Nn \l__enumext_anspic_mini_pos_str { t },
4357     label-pos / below   .code:n =
4358                                \bool_set_false:N \l__enumext_anspic_label_above_bool

4388     show-pos   .value_required:n = true,
4389     unknown    .code:n           = {
4390                                \tl_set:Nn \l__enumext_envir_name_tl { keyanspic }
4391                                \__enumext_keyans_unknown_keys:n {#1}
4392                                },
4393   }
```

(*End of definition for* label-pos *and others.*)

The function __enumext_keyans_pic_safe_exec: check the nested level position inside the enumext environment.

```
4394  \cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
4395    {
4396      \int_incr:N \l__enumext_keyans_pic_level_int
4397      \int_compare:nNnT { \l__enumext_keyans_pic_level_int } > { 1 }
4398        {
4399          \msg_error:nn { enumext } { keyanspic-nested }
4400        }
4401      \__enumext_keyans_name_and_start:
4402    }
```

Parse [⟨*key* = *val*⟩] for `keyanspic` environment.

```
4403  \cs_new_protected:Npn \__enumext_keyans_pic_parse_keys:n #1
4404    {
4405      \tl_if_novalue:nF {#1}
4406        {
4407          \keys_set:nn { enumext / keyanspic } {#1}
4408        }
4409    }
```

The function `\__enumext_keyans_pic_skip_abs:N` will return a positive value `\parsep` from `keyans` environment.

```
4410  \cs_new_protected:Npn \__enumext_keyans_pic_skip_abs:N #1
4411    {
4412      \dim_compare:nNnT { #1 } < { \c_zero_dim }
4413        {
4414          \skip_set:Nn #1 { -#1 }
4415        }
4416    }
```

The `\__enumext_keyans_pic_arg_two:` function will be used in the *second argument* of the `list` environment that defines the `keyanspic` environment, with this we will take the configuration of the *"spaces"* and the keys `label`, `wrap-label`, `parsep` and `topsep` from the `keyans` environment. The first thing we need to do is set the boolean variable `\l__enumext_leftmargin_tmp_v_bool` handled by the `list-indent` key to "false", then copy the definition of the second list argument from the `keyans` environment definition and make sure that `\parsep` does not have a negative value.

```
4417  \cs_new_protected:Npn \__enumext_keyans_pic_arg_two:
4418    {
4419      \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
4420      \__enumext_list_arg_two_v:
4421      \__enumext_keyans_pic_skip_abs:N \parsep
```

Now we increment the counter `enumXv` of the `keyans` environment and save the *total height* of the ⟨*label*⟩ in `\l__enumext_anspic_label_htdp_dim` used by `\anspic` and we will adjust the values of `\parsep` only if the key `label-pos` is set to *below*.

```
4422      \bool_if:NF \l__enumext_anspic_label_above_bool
4423        {
4424          \stepcounter { enumXv }
4425          \hbox_set:Nn \l__enumext_anspic_label_box { \l__enumext_label_v_tl }
4426          \dim_set:Nn \l__enumext_anspic_label_htdp_dim
4427            {
4428              \box_ht_plus_dp:N \l__enumext_anspic_label_box
4429            }
4430          \skip_add:Nn \parsep
4431            {
4432              \l__enumext_anspic_label_htdp_dim
4433              + \box_dp:N \strutbox
4434              + \l__enumext_anspic_label_sep_skip
4435            }
4436        }
```

Finally we *adjust* the value of `\leftmargin` and `\topsep` then set `\listparindent`, `\partopsep` and `\itemsep` to zero so that the *horizontal* and *vertical* space is not affected.

```
4437      \dim_add:Nn \leftmargin { -\l__enumext_labelwidth_v_dim - \l__enumext_labelsep_v_dim }
4438      \ignorespaces
4439      \skip_add:Nn \topsep { 0.5\box_dp:N \strutbox }
4440      \dim_zero:N  \listparindent
4441      \skip_zero:N \partopsep
4442      \skip_zero:N \itemsep
4443    }
```

(*End of definition for* `\__enumext_keyans_pic_safe_exec:` *and others.*)

<div style="text-align: right;">keyanspic</div>

Now we define the environment `keyanspic`. For compatibility with *tagged* PDF we must use the `\begin{list}` form and a lot of conditional code using `\IfDocumentMetadataTF`. We will first stop the code for automatic *tagged* PDF for `list` environments, redefine `\item` so that it cannot be used, and stop the code for automatic *tagged* PDF for the `keyanspic` environment.

```
4444 \NewDocumentEnvironment{keyanspic}{ o }
4445   {
4446     \__enumext_keyans_pic_safe_exec:
4447     \__enumext_keyans_pic_parse_keys:n {#1}
4448     \begin{list} { } { \__enumext_keyans_pic_arg_two: }
4449     \IfDocumentMetadataT
4450       {
4451         \tag_suspend:n {list}
4452       }
4453     \item[] \scan_stop:
4454     \RenewDocumentCommand \item {}
4455       {
4456         \msg_error:nn { enumext } { keyanspic-item-cmd }
4457       }
4458     \IfDocumentMetadataT
4459       {
4460         \tag_resume:n {keyanspic}
4461         \tag_tool:n {para/tagging=false}
4462         \tag_suspend:n {keyanspic}
4463       }
4464   }
```

In the second part of the environment definition we will manually place our code for *tagged* PDF and execute the command `\anspic` using the `\__enumext_anspic_exec:` function.

```
4465   {
4466     \IfDocumentMetadataT
4467       {
4468         \tag_resume:n {keyanspic}
4469         \tag_mc_end_push:
4470         \tag_struct_begin:n {tag=L,attribute=enumerate}
4471       }
4472     \__enumext_anspic_exec:
4473     \IfDocumentMetadataT
4474       {
4475         \tag_suspend:n {keyanspic}
4476       }
4477     \end{list}
4478     \IfDocumentMetadataT
4479       {
4480         \tag_struct_end:n {tag=L}
4481         \tag_mc_begin_pop:n {}
4482         \tag_struct_end:n {tag=L}
4483         \tag_mc_begin_pop:n {}
4484       }
```

Finally we check if `\anspic*` has been used, set the counter enumXvi to zero and apply our "adjusted" vertical space bottom.

```
4485     \__enumext_check_starred_cmd:n { anspic }
4486     \setcounter { enumXvi } { 0 }
4487     \bool_if:NTF \l__enumext_anspic_label_above_bool
4488       {
4489         \par\addvspace{ 0.5\box_dp:N \strutbox }
4490       }
4491       {
4492         \par
4493         \addvspace
4494           {
4495             \dim_eval:n
4496               {
4497                 \l__enumext_anspic_label_htdp_dim + \box_ht_plus_dp:N \strutbox
4498                 + \l__enumext_anspic_label_sep_skip + \l__enumext_topsep_v_skip
4499               }
4500           }
4501       }
4502   }
```

(*End of definition for* `keyanspic`. *This function is documented on page 17.*)

13.45.2   The command `\anspic`

The `\anspic` command take three arguments, the *starred versions* `\anspic*`[⟨*content*⟩] *store* the current ⟨*label*⟩ next to the *optional argument* [⟨*content*⟩] in the *sequence* and *prop list* defined by `save-ans` key. The third *mandatory argument* {⟨*drawing or tabular*⟩} is NOT *stored* in the *sequence* or *prop list*.

🔷 One of the complications here to make the `keyanspic` environment compatible with *tagged* PDF is the position of ⟨*label*⟩, the `\anspic` command processes the arguments in order, where `#1` and `#2` correspond to ⟨*label*⟩ and `#3` to the mandatory argument and puts all this inside a `minipage` environment. If `#1` and `#2`, that is ⟨*label*⟩, is above `#3` there are no problems with *tagged* PDF, but if `#3` comes first the list created with *tagged* PDF will not be correct.

We check that the command is active in the `keyanspic` environment only if the `save-ans` key is present, otherwise we return an error. The three arguments are handled by the function `\__enumext_anspic_args:nnn` and stored in the sequence `\l__enumext_anspic_args_seq` which is processed by the `keyanspic` environment.

```
4503 \NewDocumentCommand \anspic { s o +m }
4504   {
4505     \bool_if:NF \l__enumext_store_active_bool
4506       {
4507         \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
4508       }
4509     \int_compare:nNnT { \l__enumext_level_int } > { 1 }
4510       {
4511         \msg_error:nn { enumext } { keyanspic-wrong-level }
4512       }
4513     \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
4514       {
4515         \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
4516       }
4517     \seq_put_right:Nn \l__enumext_anspic_args_seq
4518       {
4519         \__enumext_anspic_args:nnn { #1 } { #2 } { #3 }
4520       }
4521   }
```

The `\__enumext_anspic_body_dim:n` function will set the value of `\l__enumext_anspic_body_htdp_-dim` equal to the "height plus depth" of the *mandatory argument* if the key `label-pos` is set "below".

```
4522 \cs_new_protected:Npn \__enumext_anspic_body_dim:n #1
4523   {
4524     \bool_if:NF \l__enumext_anspic_label_above_bool
4525       {
4526         \IfDocumentMetadataT
4527           {
4528             \tag_suspend:n {keyanspic}
4529           }
4530         \vbox_set:Nn \l__enumext_anspic_body_box { #1 }
4531         \dim_set:Nn \l__enumext_anspic_body_htdp_dim
4532           {
4533             \box_ht_plus_dp:N \l__enumext_anspic_body_box
4534           }
4535         \IfDocumentMetadataT
4536           {
4537             \tag_resume:n {keyanspic}
4538           }
4539       }
4540   }
```

The `\__enumext_anspic_label:nn` function will process inside `\makebox` the *starred argument* '`*`' and *optional argument* passed to the command. Here we will store the ⟨*label*⟩ and *optional argument* in *prop list* and *sequence* and execute the `show-ans`, `show-pos`, `font`, `wrap-label`, `wrap-ans*` and `wrap-opt` keys.

```
4541 \cs_new_protected:Npn \__enumext_anspic_label:nn #1 #2
4542   {
4543     \makebox[ \l__enumext_anspic_mini_width_dim ][ c ]
4544       {
4545         \bool_if:nTF { #1 }
4546           {
4547             \bool_set_true:N \l__enumext_item_wrap_key_bool
4548             \bool_set_true:N \l__enumext_wrap_label_v_bool
4549             \__enumext_keyans_save_item_opt:n { #2 }
4550             \__enumext_keyans_addto_prop:n { #2 }
4551             \__enumext_keyans_store_ref:
4552             \__enumext_keyans_addto_seq:n { #2 }
```

The following commands appear in the left margin:

```
4553            \int_gincr:N \g__enumext_check_starred_cmd_int
4554            \__enumext_keyans_show_ans:
4555            \__enumext_keyans_show_pos:
4556            \makebox[ \l__enumext_labelwidth_v_dim ][c]
4557              {
4558                \tl_use:N \l__enumext_label_font_style_v_tl
4559                \__enumext_keyans_wrapper_label:n { \l__enumext_label_vi_tl }
4560              }
4561            \skip_horizontal:n { \l__enumext_labelsep_v_dim }
4562            \__enumext_keyans_show_item_opt:
4563          }
4564          {
4565            \bool_set_false:N \l__enumext_item_wrap_key_bool
4566            \tl_use:N \l__enumext_label_font_style_v_tl
4567            \__enumext_wrapper_label_v:n { \l__enumext_label_vi_tl }
4568          }
4569        }
4570      }
```

The function `\__enumext_anspic_label_pos:nnn` will be in charge of handling the *"counter"* and the position of the ⟨*label*⟩, set by `label-pos` key which will have the same configuration as the `keyans` environment.

```
4571 \cs_new_protected:Npn \__enumext_anspic_label_pos:nnn #1 #2 #3
4572   {
4573     \stepcounter { enumXvi }
4574     \__enumext_anspic_body_dim:n { #3 }
4575     \bool_if:NTF \l__enumext_anspic_label_above_bool
4576       {
4577         \__enumext_anspic_label:nn { #1 } { #2 }
4578       }
4579       {
4580         \raisebox
4581           {
4582             -\dim_eval:n
4583               {
4584                 \l__enumext_anspic_label_htdp_dim
4585                 + \l__enumext_anspic_body_htdp_dim
4586                 + \box_dp:N \strutbox
4587                 + \l__enumext_anspic_label_sep_skip
4588               }
4589           }
4590         [ 0pt ] [ 0pt ]
4591           {
4592             \__enumext_anspic_label:nn { #1 } { #2 }
4593           }
4594       }
4595   }
4596 %
```

The `\__enumext_anspic_args:nnn` function will be responsible for placing the code compatible with *tagged* PDF and the arguments within the `\l__enumext_anspic_args_seq` sequence which will be processed by the `\__enumext_anspic_print:n` function in the second part of the definition of the `keyanspic` environment.

```
4597 \cs_new_protected:Nn \__enumext_anspic_args:nnn
4598   {
4599     \__enumext_anspic_start_list_tag:
4600     \__enumext_anspic_label_pos:nnn { #1 } { #2 } { #3 }
4601     \__enumext_anspic_stop_start_list_tag:
4602     \bool_if:NTF \l__enumext_anspic_label_above_bool
4603       {
4604         \\[\l__enumext_anspic_label_sep_skip] #3
4605       }
4606       {
4607         \\ #3
4608       }
4609     \__enumext_anspic_stop_list_tag:
4610   }
```

The value {⟨*n° upper, n° lower*⟩} passed to the `layout-sty` key is split by comma and is handled directly by the function `\__enumext_anspic_print:n` and passed to the function `\__enumext_anspic_row:n`.

```
4611 \cs_new_protected:Nn \__enumext_anspic_print:n
4612   {
4613     \clist_map_function:nN { #1 } \__enumext_anspic_row:n
4614   }
```

```
4615 \cs_generate_variant:Nn \__enumext_anspic_print:n { e, V }
```

The function `\__enumext_anspic_row:n` will set the *widths* for the `minipage` environments and place *all arguments* passed to `\anspic` *saved* in the `\l__enumext_anspic_args_seq` sequence inside them.

```
4616 \cs_new_protected:Nn \__enumext_anspic_row:n
4617   {
4618     \dim_set:Nn \l__enumext_anspic_mini_width_dim { \linewidth / #1 }
4619     \int_set:Nn \l__enumext_anspic_above_int { \l__enumext_anspic_below_int }
4620     \int_set:Nn \l__enumext_anspic_below_int { \l__enumext_anspic_above_int + #1 }
4621     \int_step_inline:nnn
4622       { \l__enumext_anspic_above_int + 1 }
4623       { \l__enumext_anspic_below_int }
4624       {
4625         \IfDocumentMetadataT
4626           {
4627             \tag_suspend:n {minipage}
4628           }
4629         \begin{minipage}[ \l__enumext_anspic_mini_pos_str ]{ \l__enumext_anspic_mini_width_dim }
4630           \centering
4631           \seq_item:Nn \l__enumext_anspic_args_seq { ##1 }
4632         \end{minipage}
4633         \IfDocumentMetadataT
4634           {
4635             \tag_resume:n {minipage}
4636           }
4637       }
4638     \par
4639   }
```

The `\__enumext_anspic_exec:` function will execute all the code in the `\anspic` command in the second argument of the `keyanspic` environment definition. If the key `layout-sty` is not set, everything will be printed on a *single line*.

```
4640 \cs_new_protected:Nn \__enumext_anspic_exec:
4641   {
4642     \tl_if_empty:NTF \l__enumext_anspic_layout_style_tl
4643       {
4644         \__enumext_anspic_print:e { \seq_count:N \l__enumext_anspic_args_seq }
4645       }
4646       {
4647         \__enumext_anspic_print:V \l__enumext_anspic_layout_style_tl
4648       }
4649   }
```

(*End of definition for* `\anspic` *and others. This function is documented on page 18.*)

13.46   The horizontal environments

Generating *horizontal list environments* is NOT as simple as standard LaTeX list environments. The fundamental part of the code is adapted from the `shortlst` package to a more modern version using `expl3`. It is not possible to redefine `\item` and `\makelabel` using `\RenewDocumentCommand` as in the vertical *non starred* versions.

To achieve the *horizontal list environments* we will capture the `\item` command and the ⟨*content*⟩ of this in *horizontal box* using `\makebox` for the `label` and a `minipage` environment for the ⟨*content*⟩ passed to `\item`, we will also add the *optional argument* (⟨*number*⟩) to `\item` to be able to *join columns* horizontally, in simple terms, we want `\item` to behave in the same way as in the `enumext` environment but adding an *first optional argument* (⟨*number*⟩).

A side effect is the limitation of using `\item` in this way *without* using `\RenewDocumentCommand`, which loses the original definition and affects the *standard list environments* provided by LaTeX and any environment defined using base `list` environment, including: `itemize`, `enumerate`, `description`, `quote`, `quotation`, `verse`, `center`, `flushleft`, `flushright`, `verbatim`, `tabbing`, `trivlist`, `list` and all environments created with `\newtheorem`.

💣 One way to get around this is to use something like:

```
\AddToHook{env/enumerate/before}{recover original \item definition}
```

inside `minipage`, but in my partial tests this does not have the desired effect and the vertical and horizontal spacing is distorted. For now this will remain as a limitation and I will see if it is feasible to implement it in the future.

💎 For compatibility with the *tagged* PDF we close the environments according to the presence or not of the `mini-env` key.

13.46.1 Functions for item box width

__enumext_starred_columns_set_vii:
__enumext_starred_columns_set_viii:

We set the default value for the *width of the box* containing the ⟨*content*⟩ of the items for enumext* environment.

```
4650  \cs_new_protected:Nn \__enumext_starred_columns_set_vii:
4651    {
4652      \dim_compare:nNnT { \l__enumext_columns_sep_vii_dim } = { \c_zero_dim }
4653        {
4654          \dim_set:Nn \l__enumext_columns_sep_vii_dim
4655            {
4656              ( \l__enumext_labelwidth_vii_dim + \l__enumext_labelsep_vii_dim )
4657              / \l__enumext_columns_vii_int
4658            }
4659        }
4660      \int_set:Nn \l__enumext_tmpa_vii_int { \l__enumext_columns_vii_int - 1 }
4661      \dim_set:Nn \l__enumext_item_width_vii_dim
4662        {
4663          ( \linewidth - \l__enumext_columns_sep_vii_dim * \l__enumext_tmpa_vii_int )

13.46.3   Functions for `mini-env`, `mini-right` and `mini-right*` keys

__enumext_start_mini_vii:
__enumext_stop_mini_vii:
The implementation of the `mini-env` key support is almost identical to the one used in the `enumext` and `keyans` environments, the difference is that the `__enumext_mini_page` environment on the *"right side"* is executed *"after"* closing the environment, so it is necessary to make a global copy of the variable \l__enumext_minipage_right_vii_dim in the variable \g__enumext_minipage_right_vii_dim.

```
4810  \cs_new_protected:Nn \__enumext_start_mini_vii:
4811    {
4812      \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
4813        {
4814          \dim_set:Nn \l__enumext_minipage_left_vii_dim
4815            {
4816              \linewidth
4817              - \l__enumext_minipage_right_vii_dim
4818              - \l__enumext_minipage_hsep_vii_dim
4819            }
4820          \bool_set_true:N \l__enumext_minipage_active_vii_bool
4821          \dim_gset_eq:NN
4822            \g__enumext_minipage_right_vii_dim
4823            \l__enumext_minipage_right_vii_dim
4824          \__enumext_mini_addvspace_vii:
4825          \noninterlineskip\noindent
4826          \__enumext_mini_page{ \l__enumext_minipage_left_vii_dim }
4827        }
4828    }
```

The function __enumext_stop_mini_vii: closes the `__enumext_mini_page` environment on the *"left side"*, applies \hfill and set the variable \g__enumext_minipage_active_vii_bool to *"true"* which will be used in the function __enumext_after_env:nn to execute the `minipage` on the *"right side"*. At this point we will execute the __enumext_stop_list: and __enumext_stop_store_level_vii: functions stopping the `list` environment and the level saving mechanism for storage in *sequence* of the \anskey command and `anskey*` environment. This function is passed to the __enumext_after_list_vii: function in the second part of the `enumext*` environment definition (§13.47).

```
4829  \cs_new_protected:Nn \__enumext_stop_mini_vii:
4830    {
4831      \bool_if:NTF \l__enumext_minipage_active_vii_bool
```

```
4832        {

(*End of definition for* `\__enumext_start_mini_viii:` *and* `\__enumext_stop_mini_viii:`.)

13.47 The environment enumext*

enumext* First we will generate the environment and we will give a temporary definition to `\__enumext_stop_-`
`item_tmp_vii:` equal to `\__enumext_first_item_tmp_vii:` and next to `\item` equal to `\__enumext_-`
`start_item_tmp_vii:` which we will redefine later. Unlike the implementation used by the `shortlst`
package, we will not set the values of `\rightskip` and `\@rightskip` equal to `\@flushglue` whose value is
`0.0pt plus 1.0 fil`, in the tests I have performed this fails in some circumstances and different results are
obtained when using pdfTeX and LuaTeX.

```
4934  \NewDocumentEnvironment{enumext*}{ o }
4935    {

5006       }
5007   }
```

(*End of definition for* `\__enumext_after_list_vii:`.)

__enumext_start_store_level_vii:
__enumext_stop_store_level_vii:

The `\__enumext_start_store_level_vii:` and `\__enumext_stop_store_level_vii:` functions activate the *"storing structure"* mechanism in *sequence* for \anskey command and anskey* environment if enumext* are nested in enumext.

```
5008 \cs_new_protected:Nn \__enumext_start_store_level_vii:
5009   {
5010     \bool_if:NT \l__enumext_store_active_bool
5011       {
5012         \int_compare:nNnT { \l__enumext_level_int } > { 0 }
5013           {
5014             \__enumext_store_level_open_vii:
5015           }
5016       }
5017   }
5018 \cs_new_protected:Nn \__enumext_stop_store_level_vii:
5019   {
5020     \bool_if:NT \l__enumext_store_active_bool
5021       {
5022         \int_compare:nNnT { \l__enumext_level_int } > { 0 }
5023           {
5024             \__enumext_store_level_close_vii:
5025           }
5026       }
5027   }
```

(*End of definition for* `\__enumext_start_store_level_vii:` *and* `\__enumext_stop_store_level_vii:`.)

13.47.1 The command \item in enumext*

__enumext_first_item_tmp_vii:

The `\__enumext_first_item_tmp_vii:` function will remove horizontal space equal to \labelwidth plus \labelsep to the left of the *"first"* \item in the environment at the point of execution of this function, where it is equal to the `\__enumext_stop_item_tmp_vii:` function inside the environment body definition.

```
5028 \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_vii:
5029   {
5030     \skip_horizontal:n
5031       {
5032         -\l__enumext_labelwidth_vii_dim - \l__enumext_labelsep_vii_dim
5033       }
5034     \ignorespaces
5035   }
```

(*End of definition for* `\__enumext_first_item_tmp_vii:`.)

__enumext_start_item_tmp_vii:
__enumext_item_peek_args_vii:
__enumext_joined_item_vii:w
__enumext_standar_item_vii:w
__enumext_starred_item_vii:w
__enumext_starred_item_vii_aux_i:w
__enumext_starred_item_vii_aux_ii:w
__enumext_starred_item_vii_aux_iii:w

First we will call the function `\__enumext_stop_item_tmp_vii:` that we will redefine later, we will increment the value of `\l__enumext_item_column_pos_vii_int` that will count the item's by rows and the value of `\g__enumext_item_count_all_vii_int` that will count the total of item's in the environment. After that we will call the function `\__enumext_item_peek_args_vii:` that will handle the arguments passed to \item.

```
5036 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_vii:
5037   {
```

```
5038    \__enumext_stop_item_tmp_vii:
5039    \int_incr:N \l__enumext_item_column_pos_vii_int
5040    \int_gincr:N \g__enumext_item_count_all_vii_int
5041    \__enumext_item_peek_args_vii:
5042  }
```

The function `\__enumext_item_peek_args_vii:` will handle the `\item(⟨number⟩)`. Look for the argument "(", if it is present we will call the function `\__enumext_joined_item_vii:w (⟨number⟩)`, which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
5043  \cs_new_protected:Nn \__enumext_item_peek_args_vii:
5044  {
5045    \peek_meaning:NTF (
5046      { \__enumext_joined_item_vii:w }
5047      { \__enumext_joined_item_vii:w (1) }
5048  }
```

The function `\__enumext_joined_item_vii:w` will first call the function `\__enumext_starred_-joined_item_vii:n` in charge of setting the *width* of the box that will store the content passed to `\item`. Then we will look for the argument "*", if it is present we will call the function `\__enumext_starred_item_vii:w` otherwise we will call the function `\__enumext_standar_item_vii:w`.

```
5049  \cs_new_protected:Npn \__enumext_joined_item_vii:w (#1)
5050  {
5051    \__enumext_starred_joined_item_vii:n {#1}
5052    \peek_meaning_remove:NTF *
5053      { \__enumext_starred_item_vii:w  }
5054      { \__enumext_standar_item_vii:w }
5055  }
```

The function `\__enumext_standar_item_vii:w` will first look for the argument "[", if present it will set the state of the variable `\l__enumext_wrap_label_opt_vii_bool` equal to the state of the variable `\l__enumext_wrap_label_opt_vii_bool` handled by the key `wrap-label*` and finally execute the *non-enumerated* version `\item[⟨custom⟩]` by means of the function `\__enumext_start_item_vii:w`, otherwise we will set the value of the variable `\l__enumext_wrap_label_vii_bool` handled by the `wrap-label` key to true and set the switch `\if@noitemarg` to true to execute the enumerated version of `\item` by means of the function `\__enumext_start_item_vii:w [ \l__enumext_label_vii_tl ]`.

```
5056  \cs_new_protected:Npn \__enumext_standar_item_vii:w
5057  {
5058    \bool_set_false:N \l__enumext_item_starred_vii_bool
5059    \peek_meaning:NTF [
5060      {
5061        \bool_set_eq:NN \l__enumext_wrap_label_vii_bool \l__enumext_wrap_label_opt_vii_bool
5062        \__enumext_start_item_vii:w
5063      }
5064      {
5065        \bool_set_true:N \l__enumext_wrap_label_vii_bool
5066        \legacy_if_set_true:n { @noitemarg }
5067        \__enumext_start_item_vii:w [ \l__enumext_label_vii_tl ] \ignorespaces
5068      }
5069  }
```

The function `\__enumext_starred_item_vii:w` together with the specified auxiliary functions `aux_i:w`, `aux_ii:w`, and `aux_iii:w` execute `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]`.

```
5070  \cs_new_protected:Npn \__enumext_starred_item_vii:w
5071  {
5072    \bool_set_true:N \l__enumext_item_starred_vii_bool

```

(*End of definition for* __enumext_start_item_tmp_vii: *and others.*)

__enumext_fake_make_label_vii:n   The __enumext_fake_make_label_vii:n function will be in charge of handling our definition of \item. First we increment the counter enumXvii for the enumerated items and activate support for the *check answers* mechanism, followed by support for \item*[⟨*symbol*⟩][⟨*offset*⟩] if present, then the wrap-label and wrap-label* keys which we execute using \makebox whose width will be given by the labelwidth key and position by the align key, inside the argument of this we will execute the font key together with the function defined by the wrap-label or wrap-label* keys. Finally we execute the labelsep key applying a \skip_horizontal:N and \ignorespaces.

🔶 For compatibility with *tagged* PDF and hyperref when an environment enumext is nested in enumext* and the key save-ans is not active need setting the \if@hyper@item switch to *"true"*. The explanation for this is given by the master Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier. This patch is only needed if you are running pdflatex and not if you are running lualatex

5140            }
5141            { #1 }
5142        }
5143      \skip_horizontal:N \l__enumext_labelsep_vii_dim \ignorespaces
5144    }
```

(*End of definition for* __enumext_fake_make_label_vii:n.)

13.47.2 Real definition of \item in enumext*

The functions __enumext_start_item_vii:w and __enumext_stop_item_vii: executing the true definition of \item inside the enumext* environment, unlike the implementation in shortlst we will NOT use an extra group and the plain form of the lrbox environment.

__enumext_start_item_vii:w
__enumext_stop_item_vii:

The first thing we will do is set the value of __enumext_stop_item_tmp_vii: equal to __enumext_-stop_item_vii: which we will define later, after that we will start capturing \item and *"item content"* in a *horizontal box* where the width will be \itemwidth plus \labelwidth plus \labelsep.

```
5145 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
5146   {
5147     \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
5148     \hbox_set_to_wd:Nnw \l__enumext_item_text_vii_box
5149       {
5150         \l__enumext_joined_width_vii_dim
5151         + \l__enumext_labelwidth_vii_dim
5152         + \l__enumext_labelsep_vii_dim
5153       }
```

Redefine the \footnote command.

```
5154         \__enumext_renew_footnote_starred:
```

Now we insert our *sockets* for *tagging* PDF support and run \item.

```
5155         \__enumext_start_list_tag:n {enumext*}
5156         \__enumext_fake_make_label_vii:n {#1}
5157         \__enumext_stop_start_list_tag:
```

Finally we open the minipage environment, capture the *"item content"*, make \parindent take the value of the key listparindent and \parskip take the value of the key parsep, then execute the keys itemindent and first.

💣 Here the use of \unskip and \skip_horizontal:n with the value of listparindent is necessary, otherwise an unwanted space is created when using \item[⟨*opt*⟩] and the value passed to the key itemindent is incremented.

```
5158         \__enumext_minipage:w [ t ]{ \l__enumext_joined_width_vii_dim }
5159           \dim_set_eq:NN \parindent \l__enumext_listparindent_vii_dim
5160           \skip_set_eq:NN \parskip \l__enumext_parsep_vii_skip
5161           \__enumext_unskip_unkern:
5162           \__enumext_unskip_unkern:
5163           \skip_horizontal:n { -\l__enumext_listparindent_vii_dim } \ignorespaces
5164           \tl_use:N \l__enumext_fake_item_indent_vii_tl
5165           \tl_use:N \l__enumext_after_list_args_vii_tl
5166       }
```

The __enumext_stop_item_vii: function will finish the fetching \item and *"item content"* by closing the minipage environment, the *sockets* for *tagging* PDF and the *horizontal box*.

```
5167 \cs_new_protected_nopar:Nn \__enumext_stop_item_vii:
5168   {
5169         \__enumext_endminipage:
5170     \__enumext_stop_list_tag:n {enumext*}
5171     \hbox_set_end:
```

Here we will reduce the *warnings* a bit by setting the value of \hbadness to 10000, print \item and *"item content"* from the *horizontal box*,.

```
5172         \int_set:Nn \hbadness { 10000 }
5173         \box_use_drop:N \l__enumext_item_text_vii_box
```

Finally apply the *vertical space* between rows set by itemsep key passed to \parsep using \par\noindent and *horizontal space* between columns set by columns-sep key using \skip_horizontal:N.

```
5174         \int_compare:nNnTF
5175           { \l__enumext_item_column_pos_vii_int } = { \l__enumext_columns_vii_int }
5176           {
5177             \par\noindent
5178             \int_zero:N \l__enumext_item_column_pos_vii_int
5179           }
5180           {
5181             \skip_horizontal:N \l__enumext_columns_sep_vii_dim
5182           }
5183   }
```

(*End of definition for* __enumext_start_item_vii:w *and* __enumext_stop_item_vii:.)

__enumext_remove_extra_parsep_vii:

Remove the extra *vertical space* equal to `\parsep`=`\itemsep` when the total number of `\item` is divisible by the number of `\item` in the last row of the environment. Here the use of `\unskip` or `\removelastskip` fails and does not obtain the expected result, using `\vspace` is the option and in this case, we can use a simplified version since we are always in ⟨*vertical mode*⟩.

```
5184  \cs_new_protected:Nn \__enumext_remove_extra_parsep_vii:
5185    {
5186      \int_compare:nNnT
5187        {
5188          \int_mod:nn
5189            {  \g__enumext_item_count_all_vii_int } { \l__enumext_columns_vii_int }
5190        }
5191        =
5192        { 0 }
5193        {
5194          \para_end:
5195          \skip_vertical:n { -\l__enumext_itemsep_vii_skip }
5196          \skip_vertical:N \c_zero_skip
5197          \int_gzero:N \g__enumext_item_count_all_vii_int
5198        }
5199    }
```

(*End of definition for* __enumext_remove_extra_parsep_vii:.)

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext*` environment using the *"hook"* function __enumext_after_env:nn.

```
5200  \__enumext_after_env:nn {enumext*}
5201    {
5202      \__enumext_execute_after_env:
5203    }
```

13.48 The environment keyans*

keyans*

The implementation of `keyans*` environment is the similar as that used by the `enumext*` environment except for the __enumext_check_starred_cmd:n function added in the second part.

```
5204  \NewDocumentEnvironment{keyans*}{ o }
5205    {
5206      \__enumext_safe_exec_viii:
5207      \__enumext_parse_keys_viii:n {#1}
5208      \__enumext_before_list_viii:
5209      \__enumext_start_list:nn { }
5210        {
5211          \__enumext_list_arg_two_viii:
5212          \__enumext_before_keys_exec_viii:
5213        }
5214      \setcounter { enumXviii } { \int_eval:n { \int_use:c { l__enumext_start_viii_int } - 1 } }
5215      \IfDocumentMetadataT { \tag_suspend:n {keyans*} }
5216      \__enumext_starred_columns_set_viii:
5217      \item[] \scan_stop:
5218      \cs_set_eq:NN \__enumext_stop_item_tmp_viii: \__enumext_first_item_tmp_viii:
5219      \cs_set_eq:NN \item \__enumext_start_item_tmp_viii:
5220      \ignorespaces
5221    }
5222    {
5223      \IfDocumentMetadataT { \tag_struct_end:n {tag=text-unit} }
5224      \__enumext_stop_item_tmp_viii:
5225      \__enumext_remove_extra_parsep_viii:
5226      \__enumext_check_starred_cmd:n { item }
5227      \__enumext_after_list_viii:
5228    }
```

(*End of definition for* keyans*. *This function is documented on page 16.*)

__enumext_safe_exec_viii:

The __enumext_safe_exec_viii: function will first check if the `save-ans` key is active and only when this is true the environment will be available, it will increment the value of \l__enumext_keyans_level_h_int and return an error message when we are nesting the environment, then it will call the __enumext_- keyans_name_and_start: function in charge of saving the name of the environment and the line it is running on, then it will check if we are trying to nest `keyans*` in `enumext*` returning an error and we will set \l__enumext_starred_bool to true, finally we will check if we are within the appropriate level within the `enumext` environment.

```
5229  \cs_new_protected:Nn \__enumext_safe_exec_viii:
5230    {
```

```
5231     \bool_if:NF \l__enumext_store_active_bool
5232       {
5233         \msg_error:nnnn { enumext } { wrong-place }{ keyans* }{ save-ans }
5234       }
5235     \int_incr:N \l__enumext_keyans_level_h_int
5236     \int_compare:nNnT { \l__enumext_keyans_level_h_int } > { 1 }
5237       {
5238         \msg_error:nn { enumext } { nested }
5239       }
5240     \__enumext_keyans_name_and_start:
5241     \bool_if:NT \l__enumext_starred_bool
5242       {
5243         \msg_error:nnn { enumext } { nested-horizontal } { enumext* }
5244       }
5245     \bool_set_true:N \l__enumext_starred_bool
5246     % Set false for interfering with enumext nested in keyans* (yes, its possible and crayze)
5247     \bool_set_false:N \l__enumext_store_active_bool
5248     \int_compare:nNnT { \l__enumext_level_int } > { 1 }
5249       {
5250         \msg_error:nn { enumext } { keyans-wrong-level }
5251       }
5252   }
```

(*End of definition for* __enumext_safe_exec_viii:.)

__enumext_parse_keys_viii:n   Parse [⟨*key* = *val*⟩] for keyans*.

```
5253 \cs_new_protected:Npn \__enumext_parse_keys_viii:n #1
5254   {
5255     \tl_if_novalue:nF {#1}
5256       {
5257         \keys_set:nn { enumext / keyans* } {#1}
5258       }
5259   }
```

(*End of definition for* __enumext_parse_keys_viii:n.)

__enumext_before_list_viii: The function __enumext_before_list_viii: will add the vertical spacing on the environment if the above key is active next to the {⟨*code*⟩} defined by the before* key if it is active, the call the function __enumext_start_mini_viii: handle by mini-env.

```
5260 \cs_new_protected:Nn \__enumext_before_list_viii:
5261   {
5262     \__enumext_vspace_above_viii:
5263     \__enumext_before_args_exec_viii:
5264     \__enumext_start_mini_viii:
5265   }
```

(*End of definition for* __enumext_before_list_viii:.)

__enumext_after_list_viii: The function __enumext_after_list_viii: first call the function __enumext_stop_mini_viii:, then apply the {⟨*code*⟩} handled by the after key together with the *vertical space* handled by the below key if they are present.

```
5266 \cs_new_protected:Nn \__enumext_after_list_viii:
5267   {
5268     \__enumext_stop_mini_viii:
5269     \__enumext_after_stop_list_viii:
5270     \__enumext_vspace_below_viii:
5271   }
```

(*End of definition for* __enumext_after_list_viii:.)

13.48.1   The command \item **in keyans***

The idea here is to make the \item command behave in the same way as in the keyans environment with the difference of the *optional argument* (⟨*number*⟩) which works in the same way as in the enumext* environment. In simple terms we want to store the ⟨*label*⟩ next to the [⟨*content*⟩] if it is present in the *sequence and prop list* defined by save-ans key for \item*, \item*[⟨*content*⟩], \item(⟨*number*⟩)* and \item(⟨*number*⟩)*[⟨*content*⟩] commands.

__enumext_first_item_tmp_viii:

The __enumext_first_item_tmp_viii: function will remove horizontal space equal to \labelwidth plus \labelsep to the left of the *"first"* \item in the environment at the point of execution of this function, where it is equal to the __enumext_stop_item_tmp_viii: function inside the environment body definition.

```
5272  \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_viii:
5273    {
5274      \skip_horizontal:n
5275        {
5276          -\l__enumext_labelwidth_viii_dim - \l__enumext_labelsep_viii_dim
5277        }
5278      \ignorespaces
5279    }
```

(*End of definition for* __enumext_first_item_tmp_viii:.)

__enumext_start_item_tmp_viii:
__enumext_item_peek_args_viii:
__enumext_joined_item_viii:w
__enumext_standar_item_viii:w

First we will call the function __enumext_stop_item_tmp_viii: that we will redefine later, we will increment the value of \l__enumext_item_column_pos_viii_int that will count the item's by rows and the value of \g__enumext_item_count_all_viii_int that will count the total of item's in the environment. After that we will call the function __enumext_item_peek_args_viii: that will handle the arguments passed to \item.

```
5280  \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
5281    {
5282      \__enumext_stop_item_tmp_viii:
5283      \int_incr:N \l__enumext_item_column_pos_viii_int
5284      \int_gincr:N \g__enumext_item_count_all_viii_int
5285      \__enumext_item_peek_args_viii:
5286    }
```

The function __enumext_item_peek_args_viii: will handle the \item(⟨*number*⟩). Look for the argument "(", if it is present we will call the function __enumext_joined_item_viii:w (⟨*number*⟩), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
5287  \cs_new_protected:Nn \__enumext_item_peek_args_viii:
5288    {
5289      \peek_meaning:NTF (
5290        { \__enumext_joined_item_viii:w }
5291        { \__enumext_joined_item_viii:w (1) }
5292    }
```

The function __enumext_joined_item_viii:w will first call the function __enumext_starred_-joined_item_viii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "*", if it is present we will call the function __enumext_starred_-item_viii:w otherwise we will call the function __enumext_standar_item_viii:w.

```
5293  \cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
5294    {
5295      \__enumext_starred_joined_item_viii:n {#1}
5296      \peek_meaning_remove:NTF *
5297        { \__enumext_starred_item_viii:w }
5298        { \__enumext_standar_item_viii:w }
5299    }
```

The function __enumext_standar_item_viii:w will first look for the argument "[", if present it will set the state of the variable \l__enumext_wrap_label_opt_viii_bool equal to the state of the variable \l__enumext_wrap_label_opt_viii_bool handled by the key wrap-label* and finally execute the *non-enumerated* version \item[⟨*custom*⟩] by means of the function __enumext_start_item_viii:w, otherwise we will set the value of the variable \l__enumext_wrap_label_viii_bool handled by the wrap-label key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function __enumext_start_item_viii:w [\l__enumext_label_viii_tl].

```
5300  \cs_new_protected:Npn \__enumext_standar_item_viii:w
5301    {
5302      \bool_set_false:N \l__enumext_item_starred_viii_bool
5303      \bool_set_false:N \l__enumext_item_wrap_key_bool
5304      \peek_meaning:NTF [
5305        {
5306          \bool_set_eq:NN \l__enumext_wrap_label_viii_bool \l__enumext_wrap_label_opt_viii_bool
5307          \__enumext_start_item_viii:w
5308        }
5309        {
5310          \bool_set_true:N \l__enumext_wrap_label_viii_bool
5311          \legacy_if_set_true:n { @noitemarg }
5312          \__enumext_start_item_viii:w [ \l__enumext_label_viii_tl ] \ignorespaces
5313        }
5314    }
```

(*End of definition for* `\__enumext_start_item_tmp_viii:` *and others.*)

`\__enumext_starred_item_viii:w`
`\__enumext_starred_item_viii_aux_i:w`
`\__enumext_starred_item_viii_aux_ii:w`
`\__enumext_keyans_starred_item_star:`

The function `\__enumext_starred_item_viii:w` together with the specified auxiliary functions `aux_i:w` and `aux_ii:w` execute `\item*` and `\item*[`⟨*content*⟩`]`.

```
5315 \cs_new_protected:Npn \__enumext_starred_item_viii:w
5316   {
5317     \bool_set_true:N \l__enumext_item_starred_viii_bool
5318     \bool_set_true:N \l__enumext_item_wrap_key_bool
5319     \bool_set_true:N \l__enumext_wrap_label_viii_bool
5320     \peek_meaning:NTF [
5321       { \__enumext_starred_item_viii_aux_i:w }
5322       { \__enumext_starred_item_viii_aux_ii:w }
5323   }
```

The function `\__enumext_starred_item_viii_aux_i:w` will save the *optional argument* to `\item*` in `\l__enumext_store_current_opt_arg_tl` and will save this argument along with the spacing set by the key `save-sep` in variable `\l__enumext_store_current_label_tl` if present, then call the function `\__enumext_starred_item_viii_aux_ii:w`.

```
5324 \cs_new_protected:Npn \__enumext_starred_item_viii_aux_i:w [#1]
5325   {
5326     \tl_clear:N \l__enumext_store_current_label_tl

13.49 The command \getkeyans

\getkeyans
__enumext_getkeyans_aux:n
__enumext_getkeyans:nn

The \getkeyans command takes a *mandatory argument* of the form {⟨*store name : position*⟩}. Retrieve a *"single content"* stored by \anskey, \anspic* and \item* and anskey* from *prop list* defined by save-ans key.

```
5480 \NewDocumentCommand \getkeyans { m }
5481     {
5482     \exp_args:Ne \__enumext_getkeyans_aux:n
5483       { \tl_to_str:e { \text_expand:n {#1} } }
5484     }
```

The internal function __enumext_getkeyans_aux:n is in charge of *splitting* the *mandatory argument* using ":". If ":" is omitted it will return an error.

```
5485 \cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
5486     {
5487     \str_if_in:nnTF {#1} { : }
5488       {
5489         \use:e
5490           {
```

```
5491            \cs_set:Npn \exp_not:N \__enumext_tmp:w ##1 \c_colon_str ##2 \scan_stop:
5492              { {##1} {##2} }
5493          }
5494        \exp_after:wN \__enumext_getkeyans:nn \__enumext_tmp:w #1 \scan_stop:
5495      }
5496    { \msg_error:nnn { enumext } { missing-colon } {#1} }
5497  }
```

The internal function __enumext_getkeyans:nn will check for the existence of the *prop list*, if it does not exist it will return an error message, then it will fetch the content specified by the *second argument* from *prop list*.

```
5498 \cs_new_protected:Npn \__enumext_getkeyans:nn #1 #2
5499   {
5500     \prop_if_exist:cTF { g__enumext_#1_prop }
5501       {
5502         \prop_item:cn { g__enumext_#1_prop }{#2}
5503       }
5504       {
5505         \msg_error:nnn { enumext } { undefined-storage-anskey } {#1}
5506       }
5507   }
```

(*End of definition for* \getkeyans*,* __enumext_getkeyans_aux:n*, and* __enumext_getkeyans:nn*. This function is documented on page 19.*)

13.50 The command \printkeyans

The \printkeyans command prints *"all stored content"* in the *sequence* defined by the save-ans key.
The first thing we will do is define a set of ⟨*filtered keys*⟩ with which we will control the options of the different nesting levels for the environment enumext and enumext* by storing their values in the list of tokens \l__enumext_print_keyans_X_tl.

The variable \l__enumext_print_keyans_starred_tl will have the default ⟨*keys*⟩ for \printkeyans* and will be set by \setenumext[⟨*print**⟩] and the variable \l__enumext_print_keyans_vii_tl will have the default keys for the environment enumext* nested within the *sequence* and will be set by \setenumext[⟨*print ,**⟩], the rest of the variables will be for the environment enumext and will be set by \setenumext[⟨*print , level*⟩].

```
5508 \keys_define:nn { enumext / print }
5509   {
5510     print*  .code:n     = \keys_precompile:neN { enumext / enumext* }
5511                          { \__enumext_filter_save_key:n {#1} }
5512                          \l__enumext_print_keyans_starred_tl, % starred cmd
5513     print*  .initial:n  = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5514                            rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5515                            columns=2, first=\small, font=\small },
5516     print-1 .code:n     = \keys_precompile:neN { enumext / level-1 }
5517                          { \__enumext_filter_save_key:n {#1} }
5518                          \l__enumext_print_keyans_i_tl,
5519     print-1 .initial:n  = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5520                            rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5521                            columns=2, first=\small, font=\small },
5522     print-2 .code:n     = \keys_precompile:neN { enumext / level-2 }
5523                          { \__enumext_filter_save_key:n {#1} }
5524                          \l__enumext_print_keyans_ii_tl,
5525     print-2 .initial:n  = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5526                            rightmargin=0pt, listparindent=0pt,  nosep, label=(\alph*),
5527                            first=\small, font=\small },
5528     print-3 .code:n     = \keys_precompile:neN { enumext / level-3 }
5529                          { \__enumext_filter_save_key:n {#1} }
5530                          \l__enumext_print_keyans_iii_tl,
5531     print-3 .initial:n  = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5532                            rightmargin=0pt, listparindent=0pt, nosep, label=\roman*.,
5533                            first=\small, font=\small },
5534     print-4 .code:n     = \keys_precompile:neN { enumext / level-4 }
5535                          { \__enumext_filter_save_key:n {#1} }
5536                          \l__enumext_print_keyans_iv_tl,
5537     print-4 .initial:n  = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5538                            rightmargin=0pt, listparindent=0pt, nosep, label=\Alph*.,
5539                            first=\small, font=\small },
5540     print-* .code:n     = \keys_precompile:neN { enumext / enumext* }
5541                          { \__enumext_filter_save_key:n {#1} }
5542                          \l__enumext_print_keyans_vii_tl, % starred nested
```

```
5543        print-* .initial:n  = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5544                                 rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5545                                 first=\small, font=\small },
5546      }
```

💣 The reason for storing ⟨keys⟩ in token lists using \keys_precompile:neN is because the keys are set via \setenumext but are later executed by running the command \printkeyans and they are not handled directly by its *optional argument*, except those related to the *first* opening level.

\printkeyans
__enumext_printkeyans:nnn

Create a user command to print *"all stored content"* in *sequence* for \anskey, anskey*, \item* and \anspic*. Within a group we will run our *"precompiled keys"* and then call the internal function __enumext_printkeyans:nnn.

```
5547  \NewDocumentCommand \printkeyans { s O{} m }
5548    {
5549      \group_begin:
5550        \bool_set_true:N \l__enumext_print_keyans_cmd_bool
5551        \tl_use:N \l__enumext_print_keyans_i_tl
5552        \tl_use:N \l__enumext_print_keyans_ii_tl
5553        \tl_use:N \l__enumext_print_keyans_iii_tl
5554        \tl_use:N \l__enumext_print_keyans_iv_tl
5555        \tl_use:N \l__enumext_print_keyans_vii_tl
5556        \__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
5557        \bool_set_false:N \l__enumext_print_keyans_cmd_bool
5558      \group_end:
5559    }
```

The internal function __enumext_printkeyans:nnn will check for the existence of the *sequence*, if it does not exist it will return an error message, then it will check if not empty.

```
5560  \cs_new_protected:Npn \__enumext_printkeyans:nnn #1 #2 #3
5561    {
5562      \seq_if_exist:cTF { g__enumext_#3_seq }
5563        {
5564          \seq_if_empty:cF { g__enumext_#3_seq }
5565            {
```

If the *starred argument* '*' is present we will check that the environment enumext* is not saved in the *sequence*, then execute the variable \l__enumext_print_keyans_starred_tl that contains the default ⟨keys⟩ for the environment enumext*, we set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_star_bool to true for *baseline correction*, open the enumext* environment passing the *optional argument* and map the *sequence*, then set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_star_bool to false.

```
5566              \bool_if:nTF {#1}
5567                {
5568                  \seq_if_in:cnTF { g__enumext_#3_seq } { \end{enumext*} }
5569                    {
5570                      \msg_error:nnnn { enumext } { print-starred } {#3} { enumext* }
5571                    }
5572                    {
5573                      \tl_use:N \l__enumext_print_keyans_starred_tl
5574                      \bool_set_true:N \l__enumext_base_line_fix_bool
5575                      \bool_set_true:N \l__enumext_print_keyans_star_bool
5576                      \begin{enumext*}[#2]
5577                        \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5578                      \end{enumext*}
5579                      \bool_set_false:N \l__enumext_base_line_fix_bool
5580                      \bool_set_false:N \l__enumext_print_keyans_star_bool
5581                    }
5582                }
```

Otherwise it will open the environment enumext passing the *optional argument* to the *"first level"* then map the *sequence*.

```
5583                {
5584                  \begin{enumext}[#2]
5585                    \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5586                  \end{enumext}
5587                }
5588            }
5589        }
5590        {
5591          \msg_error:nnn { enumext } { undefined-storage-anskey } {#3}
5592        }
5593    }
```

(*End of definition for* \printkeyans *and* __enumext_printkeyans:nnn. *This function is documented on page* *20.*)

13.51 The command \setenumext

The command \setenumext will be in charge of managing the ⟨*keys*⟩ passed to all environments and to the \printkeyans command. We must take precautions with the enumext* and enumext environments so as not to capture ⟨*keys*⟩ that complicate us.

__enumext_filter_level:n
__enumext_filter_level_key:n
__enumext_filter_level_pair:nn

The function __enumext_filter_level:n will be in charge of filtering the ⟨*keys*⟩ passed to the enumext and enumext* environments.

```
5594 \cs_new:Npn \__enumext_filter_level:n #1
5595   {
5596     \use:e
5597       {
5598         \keyval_parse:NNn
5599           \__enumext_filter_level_key:n
5600           \__enumext_filter_level_pair:nn {#1}
5601       }
5602   }
```

The function __enumext_filter_level_key:n will be responsible for filtering the ⟨*keys*⟩ that are passed *"without value"* by excluding the keys resume*, reset and reset* passed to the enumext and enumext* environments.

```
5603 \cs_new:Npn \__enumext_filter_level_key:n #1
5604   {
5605     \str_case:nnF {#1}
5606       {
5607         { resume* } {} { reset } {} { reset* } {}
5608       }
5609       { , { \exp_not:n {#1} } }
5610   }
```

The function __enumext_filter_level_pair:nn will be responsible for filtering the ⟨*keys*⟩ that are passed *"with value"* by excluding the series, resume and save-ans keys passed to the enumext and enumext* environments.

```
5611 \cs_new:Npn \__enumext_filter_level_pair:nn #1#2
5612   {
5613     \str_case:nnF {#1}
5614       {
5615         { series } {}  { save-ans } {} { resume } {}
5616       }
5617       { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
5618   }
```

(*End of definition for* __enumext_filter_level:n, __enumext_filter_level_key:n, *and* __enumext_filter_level_-pair:nn.)

Now define a *"meta families"* of ⟨*keys*⟩ to access from \setenumext.

```
5619 \keys_define:nn { enumext / meta-families }
5620   {
5621     enumext-1 .code:n = {
5622                       \keys_set:ne { enumext / level-1 }
5623                         {
5624                           \__enumext_filter_level:n {#1}
5625                         }
5626                   },
5627     enumext-2 .code:n = {
5628                       \keys_set:ne { enumext / level-2 }
5629                         {
5630                           \__enumext_filter_level:n {#1}
5631                         }
5632                   },
5633     enumext-3 .code:n = {
5634                       \keys_set:ne { enumext / level-3 }
5635                         {
5636                           \__enumext_filter_level:n {#1}
5637                         }
5638                   },
5639     enumext-4 .code:n = {
5640                       \keys_set:ne { enumext / level-4 }
5641                         {
5642                           \__enumext_filter_level:n {#1}
5643                         }
```

```
5644                          },
5645         enumext*   .code:n = {
5646                              \keys_set:ne { enumext / enumext* }
5647                                {
5648                                  \__enumext_filter_level:n {#1}
5649                                }
5650                          },
5651         keyans     .code:n = { \keys_set:nn { enumext / keyans  } {#1} },
5652         keyans*    .code:n = { \keys_set:nn { enumext / keyans* } {#1} },
5653         print*     .code:n = { \keys_set:nn { enumext / print    } { print*  = {#1} } },
5654         print-1    .code:n = { \keys_set:nn { enumext / print    } { print-1 = {#1} } },
5655         print-2    .code:n = { \keys_set:nn { enumext / print    } { print-2 = {#1} } },
5656         print-3    .code:n = { \keys_set:nn { enumext / print    } { print-3 = {#1} } },
5657         print-4    .code:n = { \keys_set:nn { enumext / print    } { print-4 = {#1} } },
5658         print-*    .code:n = { \keys_set:nn { enumext / print    } { print-* = {#1} } },
5659         unknown    .code:n = { \msg_error:nn { enumext } { unknown-key-family } },
5660       }
```

We store them in the constant sequence `\c__enumext_all_families_seq` separated by commas.

```
5661   \seq_const_from_clist:Nn \c__enumext_all_families_seq
5662     {
5663       enumext-1, enumext-2, enumext-3, enumext-4, keyans, enumext*,
5664       keyans*, print-1, print-2, print-3, print-4, print-*, print*,
5665     }
```

`\setenumext`
`\__enumext_set_parse:n`
`\__enumext_set_error:nn`

Now we define the user command `\setenumext`.

```
5666   \NewDocumentCommand \setenumext { O{enumext,1} +m }
5667     {
5668       \seq_clear:N \l__enumext_setkey_tmpa_seq
5669       \seq_set_from_clist:Nn \l__enumext_setkey_tmpb_seq {#1}
5670       \int_set:Nn \l__enumext_setkey_tmpa_int
5671         {
5672           \seq_count:N \l__enumext_setkey_tmpb_seq
5673         }
5674       \int_compare:nNnTF { \l__enumext_setkey_tmpa_int } > { 1 }
5675         {
5676           \seq_pop_left:NN \l__enumext_setkey_tmpb_seq \l__enumext_setkey_tmpa_tl
5677           \seq_map_function:NN \l__enumext_setkey_tmpb_seq \__enumext_set_parse:n
5678           \seq_set_map_e:NNn \l__enumext_setkey_tmpa_seq \l__enumext_setkey_tmpa_seq
5679             {
5680               \tl_use:N \l__enumext_setkey_tmpa_tl - ##1
5681             }
5682         }
5683         {
5684           \seq_put_right:Ne \l__enumext_setkey_tmpa_seq { \tl_trim_spaces:n {#1} }
5685         }
5686       \seq_if_empty:NTF \l__enumext_setkey_tmpa_seq
5687         { \seq_map_inline:Nn \c__enumext_all_families_seq }
5688         { \seq_map_inline:Nn \l__enumext_setkey_tmpa_seq }
5689         {
5690           \keys_set:nn { enumext / meta-families } { ##1 = {#2} }
5691         }
5692     }
```

Internal functions used by the `\setenumext` command.

```
5693   \cs_new_protected:Npn \__enumext_set_parse:n #1
5694     {
5695       \tl_set:Ne \l__enumext_setkey_tmpb_tl { \tl_trim_spaces:n {#1} }
5696       \clist_map_inline:nn { 0, 1, 2, 3, 4, * } % <- max level
5697         { \tl_remove_all:Nn \l__enumext_setkey_tmpb_tl {##1} }
5698       \tl_if_empty:NTF \l__enumext_setkey_tmpb_tl
5699         {
5700           \seq_put_right:Ne \l__enumext_setkey_tmpa_seq
5701             { \tl_trim_spaces:n {#1} }
5702         }
5703         { \__enumext_set_error:nn {#1} { } }
5704     }
5705   \cs_new_protected:Npn \__enumext_set_error:nn #1 #2
5706     { \msg_error:nnn { enumext } { invalid-key } {#1} {#2} }
```

(*End of definition for* `\setenumext`, `\__enumext_set_parse:n`, *and* `\__enumext_set_error:nn`. *This function is documented on page 6.*)

13.52 The command `\setenumextmeta`

The command `\setenumextmeta` will be responsible for adding new *"meta-keys"* for the `enumext` and `enumext*` environments. The implementation code was given by Jonathan P. Spratte (`@Skillmon`) answer in Simplify syntax for command that adds `.meta` key to existing keys (l3keys).

`\setenumextmeta`
`\__enumext_key_set_meta:nnn`
`\__enumext_key_def_meta:nnn`
`\__enumext_key_def_meta:Vnn`

First we will create a ⟨*keys*⟩ of type `.code:n` for *"all levels"* of the `enumext` environment.

```
5707 \int_step_inline:nn { 4 }
5708   {
5709     \keys_define:nn { enumext }
5710       {
5711         #1 .code:n = \str_set:Nn \l__enumext_meta_path_str { level-#1 }
5712         ,#1 .value_forbidden:n = true
5713       }
5714   }
```

And now we define the ⟨*keys*⟩ for the environments using `.code:n` for the `enumext` environment and `.meta:n` for the `enumext*` environment.

```
5715 \clist_map_inline:nn { enumext }
5716   {
5717     \keys_define:nn { enumext }
5718       {
5719         #1  .code:n = % ignored for now, might do something useful in the future
5720         ,#1  .value_forbidden:n = true
5721         ,#1* .code:n = \str_set:Nn \l__enumext_meta_path_str { #1* }
5722         ,#1* .value_forbidden:n = true
5723       }
5724   }
5725 \keys_define:nn { enumext }
5726   {
5727     *  .meta:n = enumext*
5728     ,* .value_forbidden:n = true
5729   }
```

Now we create the user command taking care that unknown cannot be passed as an argument.

```
5730 \NewDocumentCommand \setenumextmeta { s O{enumext,1} m +m }
5731   {
5732     \str_if_eq:eeTF { \tl_trim_spaces:n {#3} } { unknown }
5733       { \msg_error:nn { enumext } { prohibited-unknown } }
5734       {
5735         \bool_if:nTF {#1}
5736           {
5737             \int_step_inline:nn { 4 }
5738               { \__enumext_key_set_meta:nnn { enumext, ##1 } {#3} {#4} }
5739             \__enumext_key_set_meta:nnn { enumext* } {#3} {#4}
5740           }
5741           { \__enumext_key_set_meta:nnn {#2} {#3} {#4} }
5742       }
5743   }
```

The internal functions `\__enumext_key_set_meta:nnn` and `\__enumext_key_def_meta:nnn` will check the *optional argument* and create the *"meta-key"*.

```
5744 \cs_new_protected:Npn \__enumext_key_set_meta:nnn #1
5745   {
5746     \keys_set:nn { enumext } {#1}
5747     \__enumext_key_def_meta:Vnn \l__enumext_meta_path_str
5748   }
5749 \cs_new_protected:Npn \__enumext_key_def_meta:nnn #1#2#3
5750   {
5751     \bool_lazy_or:nnTF
5752       { \keys_if_exist_p:nn { enumext / #1 } {#2} }
5753       { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
5754       { \msg_error:nnn { enumext } { already-defined } {#2} }
5755       {
5756         \keys_define:nn { enumext / #1 }
5757           {
5758             #2 .meta:n = {#3},
5759             #2 .value_forbidden:n = true
5760           }
5761       }
5762   }
5763 \cs_generate_variant:Nn \__enumext_key_def_meta:nnn { V }
```

(End of definition for \setenumextmeta, __enumext_key_set_meta:nnn, *and* __enumext_key_def_meta:nnn. *This function is documented on page 6.)*

13.53   The command \foreachkeyans

The command \foreachkeyans will execute a *loop* over the *prop list* and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in Expand a .cs defined by key inside the function.

\foreachkeyans
__enumext_parse_foreach_keys:nn
__enumext_parse_foreach_keys:n
__enumext_foreach_keyans:nn
__enumext_foreach_add_body:n

We define a set of ⟨*keys*⟩ for command and we will save the default values of these in \g__enumext_-foreach_default_keys_tl to avoid the use of group.

```
5764 \keys_define:nn { enumext / foreach }
5765   {
5766     before  .tl_set:N  = \l__enumext_foreach_before_tl,
5767     before  .value_required:n = true,
5768     after   .tl_set:N  = \l__enumext_foreach_after_tl,
5769     after   .value_required:n = true,
5770     start   .int_set:N = \l__enumext_foreach_start_int,
5771     start   .value_required:n = true,
5772     stop    .int_set:N = \l__enumext_foreach_stop_int,
5773     stop    .value_required:n = true,
5774     step    .int_set:N = \l__enumext_foreach_step_int,
5775     step    .value_required:n = true,
5776     wrapper .cs_set_protected:Np = \__enumext_foreach_wrapper:n #1,
5777     wrapper .value_required:n = true,
5778     sep     .tl_set:N  = \l__enumext_foreach_sep_tl,
5779     sep     .value_required:n = true,
5780     unknown .code:n    = { \__enumext_parse_foreach_keys:n {#1} }
5781   }
5782 \keys_precompile:nnN { enumext / foreach }
5783   {
5784     before={},after={},start=1,step=1,stop=0,wrapper=#1,sep={; }
5785   }
5786   \l__enumext_foreach_default_keys_tl
```

Functions for handling unknown ⟨*keys*⟩.

```
5787 \cs_new_protected:Npn \__enumext_parse_foreach_keys:nn #1#2
5788   {
5789     \tl_if_blank:nTF {#2}
5790       {
5791         \msg_error:nnn { enumext } { for-key-unknown } {#1}
5792       }
5793       {
5794         \msg_error:nnnn { enumext } { for-key-value-unknown } {#1} {#2}
5795       }
5796   }
5797 \cs_new_protected:Npn \__enumext_parse_foreach_keys:n #1
5798   {
5799     \exp_args:NV \__enumext_parse_foreach_keys:nn \l_keys_key_str {#1}
5800   }
```

We create the command.

```
5801 \NewDocumentCommand \foreachkeyans { +O{} m }
5802   {
5803     \__enumext_foreach_keyans:nn {#1} {#2}
5804   }
```

Finally the internal functions __enumext_foreach_keyans:nn and __enumext_foreach_add_body:n will loop through the prop list and print the contents.

```
5805 \cs_new_protected:Npn \__enumext_foreach_keyans:nn #1 #2
5806   {
5807     \tl_use:N \l__enumext_foreach_default_keys_tl
5808     \keys_set:nn { enumext / foreach } {#1}
5809     \tl_set:Nn \l__enumext_foreach_name_prop_tl {#2}
5810     \prop_if_exist:cF { g__enumext_#2_prop }
5811       {
5812         \msg_error:nnn { enumext } { undefined-storage-anskey } {#2}
5813       }
5814     \int_compare:nNnT { \l__enumext_foreach_stop_int } = { 0 }
5815       {
5816         \int_set:Nn \l__enumext_foreach_stop_int
5817           { \prop_count:c { g__enumext_#2_prop } }
5818       }
```

```
5819        \seq_clear:N \l__enumext_foreach_print_seq
5820        \int_step_function:nnnN
5821          { \l__enumext_foreach_start_int }
5822          { \l__enumext_foreach_step_int }
5823          { \l__enumext_foreach_stop_int }
5824          \__enumext_foreach_add_body:n
5825          \seq_use:NV \l__enumext_foreach_print_seq \l__enumext_foreach_sep_tl
5826        }
5827    \cs_new_protected:Npn \__enumext_foreach_add_body:n #1
5828      {
